I once owned one of those 'cable-guy' type vans with the bucket on it. 35
feet to the top, 25 foot telescoping fiberglass pole, and remote
conversations were very easy....

I ran into interference with a Cisco 678 DSL modem w/Netgear FS105 switch/hub on a Yaesu VX-5 near 147.210 in the same room. I've used HF at 100 watts from 3-28 MHZ, no problems in the same room as the modem. Other interference comes from the wife calling me to dinner when I'm on the air, and the damn dog getting loose biting up the neighborhood. :-)

Wanted- Old Police Motorcycle Radios and parts
I am looking for ANY and ALL vintage police motorcycle radios and parts of same. Anything pre 1965 is of inteers and the older the better. Most of these units were motorola's but others were RCA, Avia, Link Vetric. You got it, and I want it. Also interested in old police motorcycle sirens. Email me at mark@linkcycles.com
Thanks
Mark

Does anyone know anything about this radio??

Years is was sold.
Cost new.
Power output
Coverage 144-148 mhz ??
144-146 ??
146-148 ??

Used price nowadays. (Whats it worth)

Thanks

Usually there's some sort of mark, possibly in dark gray, on the arrow. I'm guessing that it would be the negative terminal.

Another way that usually works better is to use an ohm meter who's polarity is known. You can check the polarity with another voltmeter. Assuming the positive or red lead of the ohm meter does in fact have a positive voltage on it, connect your capacitor to it and check the resistance. If you connect it properly, the meter will show a low resistance then as the capacitor discharges, the resistance should go to a much higher value. If you connect it backwards, the cap will charge, but only discharge to perhaps 10 or 15 ohms. When you measure it such that you end up with a high discharged resistance, the meter leads will indicate the correct polarity.

How many people do you know who are hams, cops and volunteer fireman and
required to carry their service radios while off duty? Do they take all
three of them into the 7-11, Wal-Mart, movie theater, grocery store, etc,
while they're shopping, or do they take the one which they need to monitor
and leave the others in the car like reasonable people who would know where
they're at if they need them? Not to mention that most VHF PD and Fire
frequencies are in the 154-155 mhz range and can both be programmed into one
type accepted radio, thus dropping your "large" burden down to two radios..

>> And I *don't* like smartasses..

> I don't much care for cowardly anonymous dumbasses, either.

Tell ya what, punk. I live in Petaluma, California and i'm not difficult to
find, so if you're ever planning to be in my area, you be sure to e-mail me
in advance so that we can arrange to eyeball and discuss this in person, cuz
i'd be more than willing to show you how much of a coward that I am..

To Anyone that might have one,

I am looking for a RF Concepts or Mirage, UHF Repeater amp at least 80
or 100 watts, or any 100% duty cycle amp with this power output, must be

in operating condition and in good shape, Need asap...

Thanks Ted Ke4tte

18. FS: Tektronix 495P Spectrum Analyzer

Newsgroup: rec.radio.amateur.equipment
Date: 2002-01-01 13:58:23 UTC
From: Fred Allen <fallen-idc@worldnet.att.net>
Message-ID: <3gjY7.208714$WW.12133724@bgtnsc05-news.ops.worldnet.att.net>
Source record: 49673

I have a Tektronix Model 495P Spectrum analyzer for sale. Unit features:

1) Covers 100Hz to 1.8GHz with -130 dBm Sensitivity and +/-1 dB Frequency Response.
2) Built in Frequency Counter.
3) Intelligent Markers with Signal Processing Features.
4) GPIB Interface
5) Much More!!!

A picture can be seen at:

http://home.att.net/~fallen-idc/idc/specan.jpg

Unit is in very good condition, there are some scratches on the outer case, but the front is very clean. Calibration expires 7-02; I will warrant for 30 days. Sorry no manuals.

Please forward any REASONABLE offers to: fallen-idc@worldnet.att.net

Thanks,
Fred

>
> Sorry for the bad news.

Depends on how stable his room temp is. If it's fairly stable , it
probably is usable on psk. Depends on the software also. The one I use
has AFC which I think could hold on to a slightly drifting signal. But
if his temp is unstable...Look out. :(I've found if you can listen to
a SSB signal for a while without it audibly drifting off freq and
having to retune, then it can be usable for PSK. I once had a ft-101ex
about 15 years ago for while, and I didn't notice it being a severe
drifter once warmed up. It's kind of like my TS-830. The radio is
electrically stable, but not thermally. I use a vfo-230 on it to cure
the thermal problem. MK

Source record: 49678

Anyone out there actually made the mods to the FT1500 to allow it to
transmit on other than the ham bands? If so, I've a question or two.
You can reply by email to lhbradley@igs.net (or here, of course)

Aaron,

Hi, I'm getting ready to mod my new 2800h. Which mods have you done
and do you have any advise? Have been to

www.mods.dk and www.qrz.com for mod info. Are there any others?

I also have the programing software 1.0

Thanks Jim

Mark,
I've said it before, the amateur radio must exhaust ALL other means of communication before he/she can get go over to another part of the radio spectrum for an emergency transmission. Everyone here keeps saying the same thing over and over again. It very obvious to even a brain dead indivual as myself that you aren't really reading what has been written or if you have, not all of it. Mark, that was not directed straight at you but everyone who has put something into this discussion.

I am saddened when I read comments like this is only a hobby. The FCC doesn't think so:

Part 97.1 Basis and purpose.
The rules and regulations in this Part are designed to provide an amatuer radio service having a fundemental purpose as expressed in the following principles:
(a)Recognition and enhancement of the value of the amateur service to the public as a voluntary noncommerical communication service, particularly with repect to providing emergency communications.
(b)Continuation and extension of the amateur's proven ability to contribute to the advancement of the radio art.
(c)Encouragement and improvement of the amateur radio service through rules which provide for advancing skills in both thre communications and technical phases of the art.
(d)Expansion of the existing resevoir within the amateur radio service of trained operators, technicians and electronics experts.
(e)Continuation and extention of the amateur's unique ability to enhance international goodwill.

We have talked about Part 97.403 read what Part 97.11 (a)(2) and (b)(4)says:

97.111 Authorized transmissions.
(a)An amateur station may transmit the following types of two-way communications:
(2)Transmissions necessary to exchange messages with a station in another FCC regulated service while providing emergency communications.

(b)In addition to one-way transmissions specifically authorized elsewhere in the Part, an amateur station may transmit the following types of one-way communications.
(4)Transmissions necessary for emergency communication.

The FCC expects us to be there in times of emergency, be it local, regional, national and, of course, international. We are there becuase this isn't just a hobby this is a Public Service we are providing to are

fellow resident on this planet.

I feel that enough has been said on this subject. Let's move onward and upward.

W9INN makes a broad line of wire antennas that would serve this purpose.
One of the more popular ones is the MPD-5-78' or 87' five band dipole.
It offers resonance on each of the 5 bands so no tuner is required. It
is also rated for 1500w pep and there are no trap capacitors to blow
out....

Illustrations, measured data, and contact info is located on the web
site listed below...

You were quite right about 6 meters for the last 5 days. Condx have been terrific from just my mobile station with a 1/4 wave vertical and 100 watts in Virginia USA.

I've been working Europe and the Carribean quite a bit. Even heard a JY9 (Jordan) today on 6 meters but the pileups were too much for my little station.

I'm working on a project of putting a full wave horizontal loop for 6 meters on my truck (vehicle - automobile) while the Solar Cycle is at near peak and F2 DX is terrific.

Somebody use ICOM SM8 mic. on a 765 rig...?
How is it work?

I need either a complete manual or at least a schematic for the subject instrument.

When I acquired this, it worked fine but has apparently failed while sitting on the shelf :(.

A copy would be fine and of course I would pay reasonable costs and postage.

I might add, if its the display and such, be prepared...The VCOS go bad in that thing and theres only one way to fix em...LABOR!!! and lots of it...IF both VCOS are bad and you arent a tech...sell it for parts at 100-150 and get a nother...M

45. IMPROVE YOUR MOBILE STATION

Newsgroup: rec.radio.amateur.equipment

About once a month, I will put a blurb on here about my Carolina Cyclone series of screwdriver antennas. I hope I don't annoy anyone by doing so, it's just that I get quite good
responses in this manner.

One of the advantages of the Carolina Cyclone is that it is more cost effective while delivering
performance equal to or beyond that of the more expensive ones. Thru careful research and.
with the assistance of a professional plastics supplier, I have found a material that meets all the
requirements of the more expensive competitors in toughness, UV resistance, and power handling. This material is UNMW,or a kind of black Nylon similar or the same as Nyloc used
on locking bolts (the little black or white collar near the head). The material turns well for the
machinist and further reduces the cost because it produces less waste. Delrin is very high cost,
and actually costs FOUR times that of UNMW. Most machinists dread to turn Phenolic because it, too, produces a huge amount of waste, comes off the lathe in long strings of fabric,
and causes a huge mess to be cleaned up when finished. It, too, costs almost 4 times that of
the Nylon derivative. Back to Delrin. What the fellows that use this hugely expensive stuff don't tell you is that, while Delrin IS very tough, UV resistant, and makes great antenna coils,
it is also brittle--meaning that if you prang your coil on a low garage door header, it is more
likely to break. We DO make mistakes sometimes. LOL! Now I do not mean to degrade the
rival materials because they are good antenna coil forms. But the point I AM making is that there is something out there that will do the very same thing at a more reasonable cost.

And that is where the Carolina Cyclone I & II come in.

Cyclone I is a FULL 2" dia
Wire is #14 wound at 8 TPI
Form is UNMW (black Nylon)
Decoupling fingers are a full 1/4" wide for strength, longevity, and tight contact.
Power handling is 800 watts (warranted)
Hardware is aluminum, brass, and stainless steel to resist corrosion and rust.
Coil cover is 1/8" wall LEXAN for a clear weather protection for many years

(Butyl will crack and discolor in a year or so)
Price is just $240 shipped (less whip) to lower 48 States Includes all ferrules, collets, and parts necessary..

Cyclone II is identical to the one above except it is a FULL 3" dia for the absolutely "persnickety" and avid HF mobile DXer. This is for the fellow that wants Texas Bugcatcher
performance and screwdriver convenience. The one who wants "Q" factors in the 400+ range.
Construction is to the same commercial-grade standards and good looks as the Cyclone I.
For example, most "generic" screwdrivers use a wood insert screwed and glued into the bottom
of a PVC reducer. This has very little in the way of threads, will sometimes strip, or come out of the bottom of the coil altogether. Without revealing too much, I have incorporated a 1" long
turnbuckle nut which has the corresponding length of internal threads. It is secured in such a
way that it is almost impossible to, either pull this assembly out of the coil, or to strip the drive
nut. I have repaired some screwdrivers that "mysteriously" stopped travelling, and the cause was that the brass wood insert pulled completely out because there is not enough material in the
PVC bushing to keep it in there securely. Yet, if disassembly is ever needed, each subassembly can be taken apart, repaired with commonly available hardware, and put back together.
Cyclone II handles a FULL 1500 watts SSB! And costs only $350 Shipped to lower 48 states. Compare those prices to some of the big name screwdriver makers! I guarantee performance that will both please and surprise you, or your money back. For those of you who
have never heard of me, I can say that I have shipped Carolina Cyclones all over the US--many to readers of this newsgroup. In 6 years of building, I have had exactly ONE to return for a
mechanical failure, and I swapped it out immediately. You will find no negative remarks on the
internet about trading with me--I do what I say or I make it right. If I didn't, I would be out of
business in short order. But I want to STAY in the antenna business because this is one of the
aspects of ham radio that I love working with.

Earilier, I said that I have a goal. My production is small--anywhere from 2-3 per month except during hamfest season. I don't try for huge numbers because I acquire the parts, I
assemble, I test, and I ship! When you get an antenna from me, it is, indeed, from me! I have
no employees. I work for myself. I need to make that goal of 3-4 antennas during January.
If you are in the market for an HF mobile antenna, please help me make that goal AND receive
an excellent product in return!

Thank you for reading, and thanks to all of you who have purchased the
Carolina Cyclone
in the past.

Happy New Year, and the best of 73 to all,

Jerry

Thanks to everyone for the feedback (here and on the 50MHz list). Nice to see you here Rod. I worked you on 12/29 while you were mobil in CO89. Perhaps next time I hear you I'll be able to test out a new mic. After much discussion and commentary I think I'll be getting a Heil. I'm going to give them a call this week to see what they have to say.

I have a Kenwood TM 241 2 meter mobile rig. It looses transmit power after prolonged high power transmission. After it cools down it resets and works fine. This is obviously a heat related problem. Is there a built in heat sensor or do I have somekind of loose connection or bad part? Any help would be appreciated.

Source record: 49560

***A friend of mine has worked on a number of 241s that did not have
heat sink compound applied before the RF module was seated causing a
rash of problems. Your problem sounds thermal and suspect the RF module
is going bad. They are available from RF Parts for about $60. Kenwood
charges much more, if in fact, they still sell them. If you do replace
the module, don't forget to apply heat sink compound.

One more point. When you transmit and it shows all of the bars lighting
up, it does NOT necessarily mean you are getting full output power.
It is misleading. Use a watt meter. If it shows low power despite the
bars lighting up full, I would seriously look at replacing the power
module.

If you are getting full output power, you might consider removing the
module, putting down heat sink compound, and replace the module and see
if that works. Good luck.

VFFs generally carry their radios whenever they're on call, and some
carry at all times if they're in understaffed areas. Cops would
depend on the area, but I've lived in at least one county where
sheriff's deputies were on call part of the time.

>Do they take all
>three of them into the 7-11, Wal-Mart, movie theater, grocery store, etc,
>while they're shopping,

Some do. Others carry a scanner and one transceiver, and let dispatch
relay to the other service. Not ideal, since each person relaying is
a possible point of failure where important information can be
misunderstood.

>Not to mention that most VHF PD and Fire
>frequencies are in the 154-155 mhz range and can both be programmed into one
>type accepted radio, thus dropping your "large" burden down to two radios..

Most, but around here, fire is 800MHz trunked with the other county
services, while police are UHF in the 460 range.

>i'd be more than willing to show you how much of a coward that I am..

You do that every time you post anonymously.

No unfortunately it can never be stable enough for PSK. It may start to work but before long you drift too far. The problem is that the VFO in those rigs are yes temperature dependant and even when they stabilize, they are not stable enough for PSK. If you read the article by Peter G3PLX, who was the implementer of the mode, it is explained in there. PLL, Rock bound or DDS are the only methods that work well for PSK. It would be a fustrating exercise using anything else.
From experience I have an FT-101E and have tried PSK31 with it and it was not very sucessful. I know there was nothing wrong with my rig. Receive was ok but TX and RX combination ended in failure.

Message-ID: <3c3261a8$1@news.bnb-lp.com>
Source record: 49566

Well it looks like the famous Astatic D-104 is soon to be a thing of the past. They are announcing on their web site the availability of the last model of D-104.

Astatic is offering a special Final Edition Silver Eagle D-104 with special markings and a collector's case....here is the URL

http://www.astatic.com/cgi-bin/catstore.cgi?user_action=detail&catalogno=D104FE

- this URL may wrap in your reader and need to be patched together

The Astatic corporation and especially the D-104 have both earned a special place in Ham Radio history....kinda sad to see them go....

I worked KP4 Sunday at about 1500Z from my mobile and 100 watts with a 1/4 wave vertical.

Europe has been coming in from 1300Z at the earliest until 1800Z or so at the latest. The times vary somewhat depending on condx each day.

I've heard some Carribean stations working Europe so just be on the lookout.

Unless someone is a cop *and* volunteer fireman, this is only one radio
assigned to each person, including an optional amateur HT. You made an
allegation that it would require carrying three radios. No one *needs* to
carry an amateur rig everywhere they walk, so leaving it in the car when
they go into a store and carrying the EM rig would be more practical and
sufficient for any emergency situation that should arise..

More justification to illegally use a modified non type accepted radio on EM
frequencies? I'm sure that you have no end to the excuses, as it's obvious
that some of you guys are determined to do it whether it's legal or not..

>> Not to mention that most VHF PD and Fire

Sure, then what is your point in arguing about modifying and using an
amateur VHF HT for use on 450 or 800 trunked EM frequencies?

Just like half of these guys, you just like to argue and piss people off?

>> i'd be more than willing to show you how much of a coward that I am..

I have a PK-232 in good condition, for sale. It is the heathkit version of the PK-232. It works fine but, is not something I am using in my shack. I use Kantronics gear.

It comes with two TNC to radio cables as well as the scope cable and the power cable connector, as well as another cable who's purpose is unknown. The roms say 1988 though I have no idea the significance of that. I also have the 'Y' data cable somewhere and I'll throw that in if I can find it (cost me $35.00 just for the cable!)

I'd like $80.00 plus shipping. Email with questions and I'll try to answer though I really know very little about this unit beyond what is mentioned here as I got it as a part of a collection of gear (a packet station) from another ham and was interested in the other parts, not the tnc but it was a package deal. I was going to use the TNC but decided to stick with gear I know (Kantronics)

68. IC-756 PRO II vs. TS-870S

Newsgroup: rec.radio.amateur.equipment
Date: 2002-01-02 04:05:54 UTC
From: rcuffee@hotmail.com
Message-ID: <df27559b.0201012005.24e79112@posting.google.com>
Source record: 49573

Does anyone have side-by-side experience with the TS-870S and IC-756 PRO II? I
was wondering how each stacks up on the HF Bands. I currently have the TS-2000 which is a good all around rig, but I need a rig with contest performance on the HF bands? The TS-2000 DSP filtering is excellent except when the bands are very crowded during ssb contests.

I will mainly be using the rig for SSB and contesting, and I will continue to use the TS-2000 for digital HF and VHF/UHF work.

Thanks in advance,

Reggie

Another shack cleaning special!

I have way too many 2M radios and so the Yeasu FT-270RH must go! The radio is about an 8.5 cosmetically. The radio has given flawless service. The LCD is clear. It has the DTMF mic and does ctcss tones. It comes with the radio, mic, power cord, and the mobile mount with quick release.

A few specs for those interested. 2 meter FM mobile radio, 45 watts output. 10 memories, and scan. It does not have the optional tone board.

I would like $95 plus shipping for the radio. If you need a picture, I can take one and upload it to my webspace for your viewing.

I am going to try to save myself the headache of selling these on eBay where they will surely command a higher price than I expect (I am constantly suprised by what stuff sells for there.)

I have two Motorolla remote handset/monitors in fair to good condition. They show wear but are not damaged. That is why only fair to good. They are black bakelite and very heavy construction. There is a red transmit light on the side and volume and PL controls on the front.

Both units were working when removed from service several years ago.

A picture of one unit (they are pretty much the same) is located at http://www.eskimo.com/~ghopper/mphone1.jpg The photo shows the unit in all it's dusty glory! It was manufactured in 1963 but still looks like the height of Motorolla technology. Actually the units are pretty cool and I was going to use them for a remote in my office for a 2m rig I keep in our wiring closet but I ended up buying a rig with a remote head that uses a 4 wire interface and decided I liked that option better.

I consider offers but I'm inclined not to let them go for any less than $25.00 each since I had an antique dealer offer me that much.

All state troopers/highway patrolmen/etc are on call 24/7. If the
department allows for a take home vehicle, then that officer is also on
call 24/7.

The PS sub-band is giving way to the 800 MHz trunk system in most of
North America. Michigan is one of the first to have a total 800 MHz
trunk system for all LE agencies in the state. It was the State Police
who started the ball rolling on that. Kudo's to them. You'll find that
when a city or county goes 800 MHz for the LE the cost is too great not

to include the rest of the local agencies, ie Public Works, Utilities, etc. The Fire Department goes without saying. I tried to spearhead the use of digital information for the DFD but the technology just wasn't there in the mid 70's. The plan was to digitize every structure in the city so that when a call came, the LT/CAPT and/or BC could have that information before the first FF entered the building. That stuff is now common place, courtesy of the technolgy developed in Amateur Radio.

I have a Kenwood TH-42AT 440Mhz HT that my wife was using until she got a F-6. The TH-42AT works fine and comes with the radio, antenna, manual, handstrap, protective cover, DC power cable (for charging -- we bought the radio used and it didn't come with a charger), and 3 Ni-cad batteries. The batteries all hold varying amounts of charge. I'd like to get $175 plus shipping for the whole package.

I never said that it didn't happen. Unlawful arrests and court procedures
occur all the time, and my point was that if the public is unaware of the
limitations of law enforcement, the police will often take advantage of
people's ignorance and take it as far as you'll let them..

> Second, I believe most states have laws regarding interfering with public
> safety personnel in the performance of their duties. In fact, several

> interfering with police communications, a state law. It seems to me that
> there was a former ham arrested last year for interfering with police
> communications out in CA, in the Los Angles area, as I recall.

All I said was that I couldn't locate any law other than interfering with
emergency CB communications in the California Penal Code, though the person
could have been charged under another code or different PC section..

> Nor did I
> say that Federal charges were filed, in fact I made the point that the
> charges were filed at the county level, what we in Oklahoma would call
> District Court.

I acknowledged this as well..

> As for how the sheriff justified confiscating the radio,
> find out who the sheriff was and ask him, I'm not defending him, just

> sheriff asked the young man and his parents to come to the office and
> demonstrate the radio. When the young man did so, the sheriff confiscated
> the radio. This was in northern CA, as I recall.

I dunno, but according to my understanding, having a modified radio is not
illegal, but only using one on unauthorised frequencies, and though I feel
that the action was appropriate, my point was that it is not necessarily a
legally justifiable reason for confiscating the radio..

> And as for FCC
> regulations not carrying any criminal penalties, you'd better check again,
> as it seems that several of the illegal low power FM "Pirates" have been
> fined and threatened with jail time if they continued to operate illegally.
> Many government agencies issue regulations that have the weight of law (look
> at the EPA and OSHA). Break them and they can, and will, through your ass
> in jail.

As I said, they will do whatever your ignorance of constitutional law allows them to do. According to the Tenth Amendment, unless it is dealing with constitutional issues, Federal Law is *not* enforceable within the confines of a sovereign state of the Union, but only in Washington DC and on federal government property..

There are several "pirate" FM stations operating with impunity..

> I'm not saying what happened is right, just telling you what transpired. My
> point is, until this issue is ruled on by the courts or a clarification is
> issued by the FCC, then you could get in trouble if you assume that 97.403
> is going to protect you if you operate out-of-band in an emergency.

I never said that I was advocating violation of FCC regulations, as even though I don't believe that the government has the constitutional authority to enact and enforce non-constitutional laws which are binding upon the states, I do believe in respect for order and the consideration of others who may be adversely affected by your actions..

> If you
> can afford the lawyers, and are willing to go through the legal hassles in
> order to set a precedent, then, by all means, go right ahead. It could cost
> you a couple of hundred thousand dollars and several years time, and then
> the courts might rule against you.

Money is not an issue, but the issue is that if I thought that it was worth the effort because my rights were being violated, I would go ahead with whatever recommendation my attorney suggested, though oftentimes it isn't worth the effort to exert so much effort to gain so little results..

> It's kinda where the "rights" meet the
> "might". A morally indignant attitude isn't going to accomplish much unless
> you have a good lawyer and a deep pocket.

So much for a "free" country which violates it's own Constitution and Bill of Rights and then allows money-hungry attorneys to take advantage of it's citizens when they can't get justice through the "public service" agencies.

I worked at a place that had a fax machine with buttons for dialing and memories.
Since there was only a few places we faxed their numbers were stored in the
memories and required only one press to send a fax and set the redial.
That machine was wanted elsewhere so it was replaced with one that looked the
same but with no buttons. I was expected to use a dial phone with no memories
to send a fax. When I prised off the dummy panel where the buttons should have
been I discovered all the switches and functionality of the other fax machine.

I bought a 300 channel radio scanner that is now 400 channels after clipping a
wire.

The ability to open up transmit is built into almost all commercial amateur radios.
The manufacturers must have some reason for that.

What sort of testing is done for type approval? The Yaesu dual band handheld
I have must have slipped through since cellular reception can be restored without
opening the case.

>Bel radar detectors used to come the same way, open up the cheaper one with no

Most such things do not provide the potential of illegal operation.

How would you feel about removing the pollution controls on your car because
it uses less fuel and drives better?

There are still more holes in their trunked system than they can count.
Out here, MSP officers assigned to the county have a county frequency in
thier car, to talk to county dispatch.
I will say it's improved from the days they couldnt even drive the freeway
without losing contact tho.

Hi Ken,

I have one each of the straight key and the paddles (separate items, not on the same base). In a word: JUNK. They're all plastic, with no "feel", poor contacts on the paddles (it's a couple of machine screws mashing against a standoff post!), the straight key uses a "click" switch, and so on. From someone who owns them... don't waste your money!

> District Court.

I acknowledged this as well..

> As for how the sheriff justified confiscating the radio,
> find out who the sheriff was and ask him, I'm not defending him, just
> telling you what happened. As I recall, the day following the incident, the
> sheriff asked the young man and his parents to come to the office and

> the radio. This was in northern CA, as I recall.

I dunno, but according to my understanding, having a modified radio is not
illegal, but only using one on unauthorised frequencies, and though I feel
that the action was appropriate, my point was that it is not necessarily a
legally justifiable reason for confiscating the radio..

> And as for FCC
> regulations not carrying any criminal penalties, you'd better check again,
> as it seems that several of the illegal low power FM "Pirates" have been
> fined and threatened with jail time if they continued to operate illegally.
> Many government agencies issue regulations that have the weight of law (look
> at the EPA and OSHA). Break them and they can, and will, through your ass
> in jail.

As I said, they will do whatever your ignorance of constitutional law allows them to do. According to the Tenth Amendment, unless it is dealing with constitutional issues, Federal Law is *not* enforceable within the confines of a sovereign state of the Union, but only in Washington DC and on federal government property..

There are several "pirate" FM stations operating with impunity..

> I'm not saying what happened is right, just telling you what transpired. My
> point is, until this issue is ruled on by the courts or a clarification is
> issued by the FCC, then you could get in trouble if you assume that 97.403
> is going to protect you if you operate out-of-band in an emergency.

I never said that I was advocating violation of FCC regulations, as even though I don't believe that the government has the constitutional authority to enact and enforce non-constitutional laws which are binding upon the states, I do believe in respect for order and the consideration of others who may be adversely affected by your actions..

> If you
> can afford the lawyers, and are willing to go through the legal hassles in
> order to set a precedent, then, by all means, go right ahead. It could cost
> you a couple of hundred thousand dollars and several years time, and then
> the courts might rule against you.

Money is not an issue, but the issue is that if I thought that it was worth the effort because my rights were being violated, I would go ahead with whatever recommendation my attorney suggested, though oftentimes it isn't worth the effort to exert so much effort to gain so little results..

> It's kinda where the "rights" meet the
> "might". A morally indignant attitude isn't going to accomplish much unless
> you have a good lawyer and a deep pocket.

So much for a "free" country which violates it's own Constitution and Bill of Rights and then allows money-hungry attorneys to take advantage of it's citizens when they can't get justice through the "public service" agencies.

I've had both radios, and I'd go with the Icom Pro (either original or II). It's built in filtering ability (for getting rid of QRM) surpasses the 870, and in my opinion the Pro has a sharper receiver - although I certainly liked my 870 a lot.

One draw back of having a Pro is that you get rather dependent on the scope - love to use it for checking band activity without having to tune up and down constantly. It's nice once you get used to it. The Pro II has a slightly more sensitive scope than the Pro, but not a huge difference.

Another great contest rig is the Yaesu MP - superb contest performance, but you have to buy all the optional filters - about a $1000l.

> upward.

You think so huh?

All you have done really, is to confuse the subject. All the previous text you have posted has nothing to do with using a modified radio out of band except 97.111 part 2. In all of the above posted text, there is not one instance where the fcc expects us to be able to use other services frequencies. It just says we "can" do so in an emergency. For me , amateur radio is mainly just a hobby. My interest is in radio and antenna theory, etc, not being Mr.Rubberduck Commando, emergency services at arms. If I decide to help in a public service event, it's more to the goodness of my heart, than just being an amateur. I think many people take advantage of this in "psuedo emergencies" like bike races, marathons, etc. Don't worry. If there is a real® emergency around here, I'm ready to do what ever is needed on the HAM bands. I can operate any band, any mode, from 160m to 70cm, base, mobile, or portable. Take your pick. I think I have handled my fair share of spectrum coverage. If PD wants me to talk to them on their frequencies, which is so unlikely around here to be laughable, then they can loan me a radio. MK

Sounds like you had a small xmit/rcve split also. The ft-101's were
notorious about that. If it received ok, it should have worked both
rcve and xmit if the software was using the afc. But, yes, I agree,
it's much easier on a newer radio that doesn't move around much. I
usually use my ic-706 for psk as it's my "computer" rig. MK

97. electromagnetic tuning fork use

Newsgroup: rec.radio.amateur.equipment
Date: 2002-01-02 19:32:43 UTC
From: c a l a n d e <rcalandeNOT@earthlink.net>
Message-ID: <3C33604C.C61794F@earthlink.net>
Source record: 49503

Iï¿½m trying to find out how an electromagnetic driven tuning fork would have been used in a radio.

This tuning fork was part of a huge collection of old radio parts that was received from a family friend in the mid 1960s. I left the tuning fork with a teacher in the early seventies.

The tuning fork was packaged in an aluminum can and included a pair of driver and pickup electromagnets attacked to the rectangular fork. When you drove it at its resonant frequency you got a nice pure sine wave output. I never truly understood how these tuning forks were ever used as part of a radio because of their low frequency.

Does anyone have any idea about hoe these tuning forks might have been used? Iï¿½ve tried to search the Internet for similar devices and closest thing Iï¿½ve found is an optical chopper.

Actually, it doesn't mean you're putting out any power at all. I had
the brick fail completely in my 241. The meter still read high output
when I set it to 50 W, medium output when set to "M", etc.

BTW, another source for the amp module is Consolidated Electronics in
Dayton. I think I paid $63, and they shipped right away. Kenwood's
price was absurd.

It strikes me that if FEMA wants us to upgrade our rigs to be able to "volunteer" in their nets, perhaps FEMA should pony up the bucks to pay for it! Just another elitist Government agency with not enough to think about. All they are accomplishing is elimination of any radios licensed under Part 97, therby removing Amateurs from participation in FEMA activity. Oh well, they either need us or dont.

No thanks

Martin,

I hope this information is of use to you, as your post is a couple of months old. This information is from the Harris service manual

1) The operating Voltage of the unit (PSU requirements)
13.6 VDC +/- 20%, 1.3 Amp typical

2) The tuning range
The operating frequency is 1.6 to 32 MHz

3) The minimum wire / whip length that can be used
1.6 - 32 MHz - Longwire, dipole, and 24-35 ft. whip
2.0 - 32 MHz - 16 ft. whip
4.0 - 32 MHz - 9 ft. whip

4) The maximum transmitter power the ATU will handle
RF input power: 125 watts PEP voice duty, 30 watts average

One item to be aware of when choosing antennas:

"JMP4 must not be installed when the RF-3281 is operating into a whip antenna from 9 to 35 feet long (2.7 to 10.7 meters). This combination may result in an overcurrent condition at low operating frequencies.

"Installing JMP4 configures the antenna coupler matching network for long-wire antennas from 75 to 150 feet (22.9 to 45.7 meters). When the jumper is installed, additional shunt capacitance is added to the antenna connection. THis capacitance is required to overcome the inductive impedence of the long-wire antennas when operated at frequencies where the electrical length of the antenna is between 1/4 and 1/2 wavelength."

Why do people buy HTs with MARS and the business band disabled?

Just as ridiculous it is for the freezer to be put into the fridge and to be sold disabled, is a ham radio built to operate on certain frequencies, than make them disabled.

They are a waste of money. I have the single paddle model and it makes extra unwanted "dits"......and no way to adjust it. Also, it is so light (and flimsy) that you have to hold it with one hand while keying with the other. Better to save your money for something more substantial.

I am again auctioning a Kenwood TS-450SAT HF Transceiver in excellent shape:

http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=1317524919

(item # 1317524919)

I initially offered this radio for auction in late November, 2001. The winning bidder kept me waiting until he said he lost his job and could no longer afford the rig.

Please take another look.....

Thanks!

These were used much like a crystal, as a means of mechanically
selecting a resonant frequency. For years they were used in various
configurations for generating or responding to a given frequency.

They were used extensively in radio for selective calling and CTCSS
encoder-decoders as recently as the 80's as they were often more
stabile, accurate and cleaner than digital alternatives.

A variation of this scheme was used simply to generate an AC signal
from DC in order to drive the transformer of a HV power supply
for tube projects. They were typically used in tube type car radios.
Another version of this item had contacts for the transformer primary
and secondary windings and could switch polarity in sync to provide
a switched HV DC back from the transformer again without the
need for rectifiers.

Can anyone help with paperwork - schematic - component layout - mods and general info on this unit please.

It drifts about 150hz and also is "very" QRP (about 2watts at 14.000mhz-3watts at 14.200mhz and 1watt at 14.350mhz....and not sure of input drive (works about the same with 2.5 and 0.5 watts from my FT290mk1 (2mtre).

Would appreciate any info.As this unit was a gift from a friend who is now "Silent Key" and i would like to put it to use in the shack for sentimental reasons (also to use it of course!!!) hi.

T.I.A.

Source record: 49529

I own a '98 Ford F-150 pickup with the 4.6 litre SOHC engine.
On HF, I'm getting what sounds like old fashioned spark plug
noise, varying directly with engine RPM, but its intensity
also varies directly with throttle position. In other words,
the harder I accelerate, the louder the noise is. At idle,
it's below the atmospheric noise floor. At full throttle,
it's S9 or higher. This doesn't seem like ignition noise
to me, because all of the ignition noise I've experience in
28 years of mobiling has been of a constant amplitude. Any
others out there having this situation?

Here is a quote crom the CW Howe web site:

"As from 17th April 2000, The QRP Component Company, G3TUX, took over
the HOWES KITS range of low power amateur radio kits for the home
constructor. Sales and product support for HOWES KITS should now be
obtained from The QRP Component Company. Please see www.g3tux.com for
details."

I didn't see a kit like you describe, however, you may be able to
contact the site owner and see if the information you need is
available. It may cost you a few bucks (pounds).

Source record: 49536

A known and common problem - in both gas AND diesel rigs - it occurs due to computer generated
triggering impulses to the injectors, and seems most serious around 7 mhz. Best seen fix so far is
careful and thorough wrapping of all underhood wiring in aluminum foil, and copious RF grounding at
numerous points - plus similar RF bonding of hood to body and exhaust system to body/frame, etc.
It's cheap, and relatively easy - and it WORKS!

In 10 years of servicing Motorolas and Micors, I can't recall ever having to replace a final transisitor in either a VHF or UHF unit

I did, however, have to replace a few of the driver amps in Micor Bases on UHF

now finals in hi-band Mocom 70's were a different story; I used to keep a couple of the 45-watt boards with heat-sinks made up for quick swaps.

I have the Yaesu MD-1 desk mic and a Heil BM-10 headset with the HC-5 element. I have gotten good reports with both. I use the MD-1 most of the time and the headset just for contesting. I am considering getting the Heil HM-10 dual element mic and the shock absorbing boom when I remodel the shack this year. I know several people with that mic on other Yaesu rigs and it sounds great.

Good luck and I hope to talk to you on the air.

Titan 10m mobile:

http://www.bills2way.com/equip/titan_mobile.html

Looking for whatever for both, I just don't need them anymore. Radio is in excellent condition although the included mic is not the original stock mic. The amp is in excellent shape, except for a hole on each side of the case where it was screwed into the floor of my car.
I am looking for either a 20 or 40m qrp rig or the like.

ve3tmt@rac.ca

I have a PK-232 in good condition, for sale. It is the heathkit version of the PK-232. It works fine but, is not something I am using in my shack. I use Kantronics gear.

It comes with two TNC to radio cables as well as the scope cable and the power cable connector, as well as another cable who's purpose is unknown. The roms say 1988 though I have no idea the significance of that. I also have the 'Y' data cable somewhere and I'll throw that in if I can find it (cost me $35.00 just for the cable!)

I'd like $80.00 plus shipping. Email with questions and I'll try to answer though I really know very little about this unit beyond what is mentioned here as I got it as a part of a collection of gear (a packet station) from another ham and was interested in the other parts, not the tnc but it was a package deal. I was going to use the TNC but decided to stick with gear I know (Kantronics).

Another shack cleaning special!

I have way too many 2M radios and so the Yeasu FT-270RH must go! The radio is about an 8.5 cosmetically. The radio has given flawless service. The LCD is clear. It has the DTMF mic and does ctcss tones. It comes with the radio, mic, power cord, and the mobile mount with quick release.

A few specs for those interested. 2 meter FM mobile radio, 45 watts output. 10 memories, and scan. It does not have the optional tone board.

I would like $95 plus shipping for the radio. If you need a picture, I can take one and upload it to my webspace for your viewing.

Source record: 49457

The ClearSpeech products (base unit and the speaker model) reduce atmospheric static, electrical noise from power lines, computer hash, automotive ignition noise and any other constant noise source by approximately 12 dB, heterodynes and carriers (tuner - uppers) by over 50 dB. If the source is a constant noise source you will be amazed at the effectiveness. However if it is a non-constant type noise source such as speech based I doubt it would have much effect since by design it passes speech information.

They have a toll-free tel# and a 30-day money back guarantee.

http://www.amcominc.com

1-888-803-5823 - sales
1-406-844-3052 - tech support

I am amazed everyday how well my ClearSpeech Base Unit works. I have logged several 'new ones" that I could not even hear when I turned the unit off..... there is no headphone jack per say...I have attached walkman headphones to the speaker out jack and that worked but since the jack is mono I only heard out of one earpiece.

I've spoken to him via email and he insists that his FT-1000D is "the best commercially made radio" and is incapable of causing interference. He trashed my 756Pro as the problem. We're about a 1,000 feet apart and both operate mostly on the 20mtr band. He uses a microphone equalizer and I think that's part of the problem. The other curious thing is, I heard him testing one day with S-9 sigs and he was barefoot on his dummy load! I switched my dummy load on, with 1.5kw and called him and he never responded. The 756pro has pretty steep skirts and I can knock him out quit a bit, but he still takes out any weak DX and the voice peaks are pretty annoying. I've also wondered if the Timewave DSP599 unit would help.

I considered the Timewave 599zx but many of those owners have found the ClearSpeech to do a much better job. It is also a much simpler DSP to operate with only an on/off switch. With the Timewave or MFJ or any of the others one is constantly fiddling with knobs and interpreting read-outs instead of concentrating on the QSO.

The reason the ClearSpeech DSP is currently the best is the proprietary algorithm that AmCom has licensed from ClearSpeech Technologies. ClearSpeech Technologies has nothing to do with Ham Radio but they have everything to do with communications intelligibility and enhancement through programming of digital signal processors.

I first witnessed what the ClearSpeech Base Unit could do attached to my friend's FT1000MP which has built-in DSP. I do not mean to ruffle any feathers but the ClearSpeech Base Unit was dramatically much more effective in noise reduction than the FT1000MP's built-in DSP. Now my friend simply leaves the ClearSpeech unit on and never touches the built-in DSP. It has been the best $149 I have ever spent on Ham Radio....OK off my soapbox!

You and your neighbor maybe too close for any product to help. My Elmer-W7NH (sk) lived one block away and we had to manage the best we could if both were on the same band. Proximity may be the real culprit here.

>Anyone try any of these budget-priced keys?

...All depends on what you want it for. I see several folks here have some experience with these keys.. but I can't believe someone would buy one expecting to use it as 'Base Station' key. They are way to light and have poor 'feel' for that sort of use. They weight all of an ounce or so and come with ridiculous little rubber feet (which do nothing to hold them in place on a tabletop).
.....BUT if you strip of the feet and glue on a square of Velcro (mounting the matching piece somewhere comfortable in your car) they make a passable 'Mobile CW' key. I've been using mine that way for over 6 yrs... it's never broken, works well enough, and at $12, is cheap to replace. It's the same reason I run 'Hamstick' type HF antennas on the car... cheap ($12 @ a swap) and easy to replace (vs >$250 for an Outbacker)... I don't even TRY to work weak stations while mobile... can't hear 'em over the road/engine noise anyways!

The Whiterooks... for a 'Base Key'... forget it! But in some other compromise situations they fit the bill nicely.

Both are good if they are working. I think the 930 was one of kenwoods
better older solid state radios, but it's kind of quirky in the fixing
dept. being they are getting so old. Hard to get parts, etc I bet. The
761 is slightly newer, and is good too, so myself, I'd probably go for
the 761. It's slightly newer technology than the 930. I do like a good
working 930 though.:/ It was a good radio for it's time. MK

I doubt the clearspeach gaget will do anything for you. A thousand feet is not very far, you might well be picking him up that close. Ham receivers are not as crunch proof as everyone would like us to think, check out the blocking dynamic range figures for your radio at the ARRL product review, those tests are made at a standard 20 khz spacing.

My first suggestion is to turn off your preamp in the receiver that might help. You dont want to hear my second.

Good luck. dj

No, it won't help with this type of problem. If the signal is strong enough to overload your rig's front end and blow by your filters, then your going to hear it no matter what. However, if it is of reasonable strength, but is one of these "Hi Fi audio" stations, you can try to let them know that they are too wide, but most of these "audiophiles" will just blow you off and blame it on your equipment (This is becoming especially annoying on 17 meters due to the limited bandwidth. Five or six of these guys on the band and it is pretty much unusable).

And no, there is no direct headphone support on the unit.

Check out Ten Tec (http://www.tentec.com) they have one you can assemble yourself in kit form or
the same desk mic already put together. If their desk mics are as good as their radios it's bound to
be a great mic. (As soon as the rat hole fund recovers from the purchase of the TT 6N2, their desk
mic is next on my purchase list :)

Hey Chris, just a quick question. I have a Justice Antenna, and use
it with the CC Radio Plus. It significantly increases the signal
strength reading on many frequencies, especially on lower frequencies.
However, on higher frequencies in the 1100's and above the signals
get mixed together, and do not improve by rotating the antenna. Is
this normal?
Thanks, Jeff

Chris, I have an original CCrane Radio and a Kiwa Pocket Loop. I was unable to couple a signal (at any normal distance)from the Kiwa's loop field, or their ferrite loop, or their direct am adaptor to the screws on back w/o extreme uncontrollable feedback. The same Kiwa works great w/ a Sony 2010 and also w/ their super regen addon module, I get additional performance.

Can you comment on this problem?

Also, can you describe the Justice antenna in more detail? Are you remotely dc tuning varactor diodes to two ferrite loops (outside) and providing some amplification and filtering inside? Are the loop fields at right angles to each other? How does your loop compare to a high Q, 2 foot LC air loop?

TIA, Ed Bonato (W3DLZ)

Call your local FCC department and they will send someone down with gear to measure the harmonics coming off his signal. It's best not to warn the other fellow that your calling or he will not operate as he normally would. I had to do this on someone myself cause i was getting allot of interference on nearly all bands. I confronted him many times and was as polite as I can be. Once you have followed every avenue of courtesy then you have to get tough. Sounds like his signal is harmonics rich from overdriving his FT1000. You got do what you got do. If he is at fault then the inspector will issue a warning and require him to tone it down. Failing this he can be charged and radio privileges removed as well as radio gear confinscated. Believe me they are serious!

Source record: 49486
Cross-posted to: rec.radio.swap,alt.ham-radio.marketplace,rec.radio.amateur.equipment,rec.radio.amateur.swap

I have a Kenwood TS 530S HF Transceiver. With the service and operating manual. I have owned this radio for 13 years and it was worked fine. It had a intermittent display problem where the display would not turn on 100% of the time. It has since failed. So I am selling the radio as a tech special. The radio does turn on but the display is not on. It comes with the manuals and 2 ssb filters YK88S and SN.

I used a professional Beyer Dynamic DT 108 headset with this radio and a RTS broadcast intercom box modified to interface with this radio. THIS is not included. If you want the headset and box the price is $100.

The radio and a NEW Radio Shack hand mic (not interfaced to the radio) and a used Shure Desk Mick (also not interfaced to the radio) $250 shipped free in the CONUS.

BULLSHIT!

It's far MORE likely the complainer needs a better understanding of the problems involved in dealing
with extremely strong LOCAL stations operating near their frequency on the same band - and ALSO he
probably needs a better understanding of proper operation of HIS OWN gear!

IF the complainer will disconnect his antenna, or use other methods to reduce the locals signal down
somewhere below S9, and be sure his receiver's noise blanker is switched OFF, chances are, he will
find the various spikes are GONE - and tuning across the "offending" signal may well reveal that it
is now "magically" as clean and narrow as OTHER signals of similar strengths encountered on the ham
bands!

QST published a well written article a few months back pointing out the need for many hams to better
understand the adjustment and operation of THEIR OWN EQUIPMENT before jumping on a soapbox or
pounding on doors trying to eliminate a problem that actually originates in their OWN hamshack due
to ignorance and improper operation of their OWN gear - just like the folks with guitar amps and
telephones that AUTOMATICALLY ASUME the nearby HAM is at fault when their non-radio gear starts
functioning like a short wave receiver...

Make DAMN SURE you fully understand where the problem REALLY exists before making a noisy fool of
yourself!

YET another BULLSHIT!

The FCC has FAR better things to do with their time than referree idiotic squabbles between hams -
especially when the "problem" is clearly an issue of two hams close together trying to operate on
the same band at the same time - any of you guys ever work field day where multiple stations packed
close together are all operating at the same time?

And "Zoom", do tell us how successful YOU were in getting the FCC involved, and the other ham's
equipment "confiscated"...

We'll wait.....

I didn't say it sounded awful, but when you consider that several off the shelf Radio Shack mikes sound as good or better - all for less than $50.00 ... There are many mikes, and other options available that will easily sound as good or better for a lot less money.

Hi,
Does anyone out there happen to have a Mic connector for an Azden PCS7000 they would like to sell? If you have one or know anyone who does, please let me know as I need one for my radio!
Tks very much,
Steve, K2FW

Pack it with the suitcases and it's no problem. Pack it in the carry
on, and be prepared to unpack it and do all that explaining every time
you change flights.

Yet another BULLSHIT.

The FCC will laugh at this. If the original guy who is whining about a HAM being close to her and overloading her front-end then she should has these options
1. Live with it
2. Turn off her radio
3. Move

Bob

I missed the original, and happen to need a few.
What's the length, and how much per?

I'm using these in a window-box, so I need about half an inch or better wall thickness.

No... the ClearSpeech won't help. ClearSpeech does not recommend
headphones use. When I asked them why, they told me in a round about
way, that most people are too stupid to make sure they turn down the
volume before plugging in the 'phones. No "audio padding" as they
described it. But, you can use 'phones no problem. The unit built into
the speaker is identical in design, but DOES have a headphone (ext.
spkr.) jack on the back. The speaker has good audio response.

As far as your neighbor... run your attenuator, and/or cut back the RF
gain, turn OFF your noise blanker (in this case the ClearSpeech would
help remove static). You can run a narrow bandpass filter to cut down
on out band of interference This probably won't help you being on the
same band. Maybe you need to explore different bands, or possibly just
operate when he doesn't. I've lived close to other hams, and we just
worked out a schedule.

Good luck. If all else fails.... GO MOBILE !

Well I take exception to being called a liar but I guess you can do that from your safe place behind your keyboard.

The fellows name here in Canada is Mr. Gary Cook in Kingston Ontario. He is with industry Canada which is similar to your FCC. He brought equipment over to test the harmonic strength coming from the offending station and found the harmonics generated to be beyond what is acceptable. He then introduced himself to the gentleman and asked if he could do further tests which the fellow agreed to. His gear was determined to be at fault and was ordered to have it looked at and another inspection would be done in a months time. He was also told of the circumstances that would arise if he did not do anything and continues to operate as he was. I was not the only one affected by his dirty transmissions. The fellow did comply and had his gear repaired and no further incident.

When a complaint is made your intitled to have an inspector come and investigate. It only takes him a few minutes.

Now if your FCC won't do that for you as they will here then maybe you should ask why not! I'm sure if you check into it there is a department that takes care of this within the FCC.

I've been polite and expect you to do the same!

Regards,
Robert

Without commenting on the "ClearSpeech" device, since I've no
experience with it, the advice above is good ... if the nearby ham
is REALLY strong at your location, he is probably causing front
end overload in your receiver ... cutting him down in signal strength
will help (but, unfortunately, it will also likely make some of the really
weak ones fall below your noise floor as well.

Good luck and 73,

Thanks for the replies....geez, didn't know it sounded like I was whining, just thought I was stating the fact that I'm getting interference from a nearby ham. (Gary and Bob seem to have gone to the same school with emphasis on getting their "BS" degrees) At any rate, yes, I definitely don't use the preamp when he's on and I can take out most of his signal with 18dB attenuation. He's generally about 40db over so it's not like he's pinning the needle. Actually, the other ham wasn't aware of the situation until I mentioned it to him, primarily because he ragchews and I hunt DX. Thus, my transmissions are generally pretty short. We had a cordial conversation and agreed to work toward a mutually acceptable resolution.

The ClearSpeech unit sounds like a great device.

73 and Cheers!

> Are any of the ADI/Pryme/Premier or Adonis mics decent? If so, what models?
> Any other suggestions welcomed! Thanks!!

You could make one from an electret condensor element for peanuts.
Thats what most of those radio companies will sell you as an
overpriced desk mike. On 2m rigs, this is usually the route I take, as
it's simple. The voltage "appx 8v" is already hot on the mike line, so
no batteries are needed. A decent electret can sound pretty good on
FM. Most of the hand mikes use them these days. I use an audio
technica unidirectional dynamic mike "studio" type mike on my 706mk2g
and TS-830. It's a bit better than an electret element. And believe
me, on FM it sounds much better than my stock HM-13 hand mike. On HF,
I could tell people my 706 was a 756 and they wouldn't be able to tell
it wasn't. It's a pretty smooth sounding 706 with that mike on it.
I've had some guess it was my 830 when I test them. But for your's I'd
probably just rig up an electret element. Thats what I did on my
ft-470, and my ft-2500m. You can buy an element at rat shack for
2.00$. You can also buy fairly decent studio type dynamics there for
fairly cheap. Rat shacks mikes are made by shure. Also at the music
stores like MARS etc. They sell all kinds of mikes from cheap to
ridiculous. I consider a mike that costs more than my radio as
ridiculous being the radio clips off over 3000 hz anyway... But they
still sell like hotcakes to the audio rack crowd. :/ MK

> Thanks, Jeff

Hello Jeff,

I haven't had any problems like you mentioned. I have however noticed that with strong nighttime skywave propogation, tuning can be a little difficult because of the gain of the Justice AM antenna and the overlapping signals on the AM BCB. I regularly listen to 1530 KFBK from Sacramento during the day and night. I live about 250 miles NW of Sacramento and the station comes in very strong, almost like a local station. However at night, I get a little overload from stations from Mexico. That's just the way it goes until I figure out how to change the ionosphere. hmmmm....

Be aware of the second harmonic when tuning the antenna. When the receiver you are using is tuned to 1060 and the Justice antenna is tuned to 530, the harmonic will saturate the front end and you will be listening to 530, whether you like it or not. 530 * 2 = 1060 ---- 540 * 2 = 1080 and so on.

The tuning indicator will make it easy to eliminate this problem by just looking at the dial face. You will also notice a sharp peak in the audio when tuning and can actually hear the 2.6kHz passband of the antenna. If this disappears when tuning above 1100 there could possibly be a problem with the unit itself.

If you are still having problems above the 1100's, try using the additional transmit ferrite on top of the radio. If all else fails, give me a call and I will get you taken care of.

Take Care and Best Regards,

Chris Justice
Research and Development Engineer

Here's some more for you Carl. Your "What's your problem" reply is exactly what I would expect from someone who is associated with NO CODE. The original whining post sounds like listening to a bunch of whining women on 2 meters. What repeater do you work on?

208. Six meter RFI/TVI

Newsgroup: rec.radio.amateur.equipment
Date: 2002-01-05 00:17:10 UTC
From: Ed Cregger <nm2k@arrl.net>
Message-ID: <u3ch8lc0td4lda@corp.supernews.com>
Source record: 49407

I have been operating on six meters since 1982 with power levels of up to 170 watts. I have yet to receive one complaint from a neighbor regarding RFI or TVI caused by six meter operation. I cannot say the same thing for operating on fifteen meters.

My station, for the first sixteen years, was in the middle of a tightly packed community in NJ without a single complaint. I am now having no difficulty in a typical northwest Georgia residential community. I do not use special filters or any other "tricks" to limit my neighbor's exposure to RFI or TVI.

Cable and satellite TV has made the issue of six meter interference problems a thing of the past in most instances. Someone watching TV while using rabbit ears might have a problem. But how common is that these days?

I wouldn't worry about running six meters.

mu own personal experience is that if yo try to be open about
anything electronic, then those nice people at security
will try to be nice back but will then suggest you put it
in your checked-baggage.

then you have the problem of wondering whether you will see it again!

The whole story is fully contained in your *new* statement that YOU were NOT dealing with the FCC,
but what you THINK to be the Canadian equivelant...

Sorry charlie they are NOT the same, nor are you likely to get the same treatment on THIS side of
the border - hell, we can't even get the FCC to do a check on an illegal CBer running a dirty,
overpowered and out-of-band station, even when we give them the guys name, address and times he
normally operates - and yeah, you're RIGHT, they SUCK!

Hello
I am in need of a Telex Model CM1210 16 ohm Headset with Boom Mic 8 Pin Connection Circuit. (It also has an Inline rocker switch for P/T)
Would be very much appreciated if someone could send me a circuit diagram or just the pin connections to:

VE3FDK@rac.ca
Tnx in advance John

FOR the record, *I* have SEVERAL good friends who are also hams, and who live/lived near me - they
frequemtly run high power, and when they DO, it's entirely POINTLESS for me to attempt to operate on
the same band they are on. It's NOT because they are running dirty stations, just strong signal
overload that FEW rigs in ANY price class are designed and built to operate with. I can attenuate
their signals down to an S9 or below by disconnecting my antenna or connecting a dummy load, and
their signals instantly become clean and appropriately narrow - stations involved are me, WX6M,
N6WVF, and K6ZU... 2 of those stations are within about a quarter mile from me - and ALL run amps, I
lived across the block from the other when living in town - HE was strong enough to register on my
field-strength meter when he transmitted! (that's how I usually checked to see if he was operating
before I fired up MY rig!) 2 of my other friends, W7DI and W6ER have only ONE house between them in
Fairfield - do you think THEY use the same band at the same time? Not on your life!

NOW, *I* could have made various comments about how "wide", and "splattery" their signals were, but
I would have been DEAD WRONG - there was NOTHING wrong with their stations other than the plain and
simple FACT that we just lived too close together to operate normally!

The solution is as you have now suggested, rather than intimate there's something wrong with the
other guys station that HE should correct to appease you, and doing as some others have suggested
and go running foolishly (and POINTLESSLY!) to the FCC, try to work ot a schedule or band use plan
you can both live with - perhaps YOU use 75 meters when HE is on 20, etc...

OH, and don't forget, even a GOOD, expensive transmitter giving you a 40 over signal on its PRIMARY
operating frequency will ALSO be giving you an S8 or better on its harmonic frequency - that just
the state of the art in current transmitter design and production - and THAT'S not the other guys
fault either!

Regards...

max,

During Jan-Feb 1999 in Fairbanks, AK the outside temp was minus 55 for at least two weeks. I never removed a radio (VHF/UHF) from the car, nor did I have any problems with condensation. Of course I know it was not the best for the electronic gear--but I got through it...

Max wrote:

hello,

i have for sale a complete swan 500 station.
swan 500 transceiver 80-10 meters 70-200+ watts out depending on band.
looks very good for age. no knobs missing or extra holes. front panel is
nice. comes with w7fg copy of manual
117vc power supply. works and looks good. has muffin fan wired to jones
plug that sits on top of finals in the rig. has hook ups for a dsp 9 added
model 410 external vfo. nice condition. works well
model 22b vfo adapter. works well, for vfo
model vx-2 vox adapter. i have not done the wiring change inside the radio
for this because i did not use this rig or cw. mod can be done very easy.
Sure 444 desk mike with swan logo. good condition.
model fs-2 swan field strength meter. meter not cracked and has original
antenna, which is a rare find these days.
Swan model wm-3000 2000 watt meter. works and looks well.

best offer over $375.00. alot of equipment for the money. it took me
nearly three years to collect all this gear. hate to sell but have other
interests and too many rigs. pics can be seen at
http://home.earthlink.net/~ku4yp will sell to lower 48 only. actual packing
and shipping extra. the price is pretty firm but i will listen to offers.

thanks.

Maybe it was not intentionally meant to be, but everybody I know (including myself) who has ever tried one ended up buying one (or more). I was very skeptical of this device, having already owned several Timewave units. However, all I can say is this simple little box makes all the difference in the world, especially when running mobile.

Small, no knobs to mess with, and it performs way better than my Timewave units (DSP 9+ and DSP 59Y). At home, I turn off the DSP in my 756 Pro, and use the Clearspeech unit 90% of the time, in the mobile, it is in use with my FT-100 100% of the time.

Source record: 49440

Hello All,

I recented aquired a Kenwood TK-706D 2 channel VHF mobile
and need some information on how to program it. I have the correct
SW which is KPG-6D. I will have to custom build a programming cable also
as I don't want to pay a fortune for a new one.
When I received this radio there was no XMIT from it. Is it possible
that programming/EEPROM has been cleared and it just needs to be
re-programmed.
If this is the wrong newsgroup for asking technical info I apologize
as I am not sure where to inquire otherwise.

TIA

236. Kenwood TH-D7AG Antenna Connector

Just have to jump in here. I used to live across the street from another ham. He saw my station and got interested. We rarely operated on the same band at the same time, although sometimes we did. We both ran barefoot CW and as expected, we might hear backwash or desense and even see it on the meter if we were on the same band together. This is absolutely normal.

Any typical superheterodyne receiver will NOT have selectivity in the RF stages sufficient to avoid undesired mixer products or desense. Also, check your specs for selectivity of your 1st IF filter at -60db because you are dealing with a signal quite capable of exceeding this selectivity AND for low level feculence to be heard even when far below FCC standards and the spec of the respective radios.

In the above situation, we were both using tube radios, and I was using a dipole while my neighbor had a vertical (theoretical 20db isolation from cross polarization) and we were less than 200yds apart. My answer is that if you both use Amps on the same band, you better be friends and avoid annoying each other, or someone should move. Check around within a couple of miles for HF antennas before you buy if you like weak signal work on 20 meters.

: FOR the record, *I* have SEVERAL good friends who are also hams, and who live/lived near me - they
: frequemtly run high power, and when they DO, it's entirely POINTLESS for me to attempt to operate on
: the same band they are on. It's NOT because they are running dirty stations, just strong signal
: overload that FEW rigs in ANY price class are designed and built to operate with. I can attenuate
: their signals down to an S9 or below by disconnecting my antenna or connecting a dummy load, and
: their signals instantly become clean and appropriately narrow - stations involved are me, WX6M,
: N6WVF, and K6ZU... 2 of those stations are within about a quarter mile from me - and ALL run amps, I
: lived across the block from the other when living in town - HE was strong enough to register on my
: field-strength meter when he transmitted! (that's how I usually checked to see if he was operating
: before I fired up MY rig!) 2 of my other friends, W7DI and W6ER have only ONE house

between them in
: Fairfield - do you think THEY use the same band at the same time? Not on your life!
:
: NOW, *I* could have made various comments about how "wide", and "splattery" their signals were, but
: I would have been DEAD WRONG - there was NOTHING wrong with their stations other than the plain and
: simple FACT that we just lived too close together to operate normally!
:
: The solution is as you have now suggested, rather than intimate there's something wrong with the
: other guys station that HE should correct to appease you, and doing as some others have suggested
: and go running foolishly (and POINTLESSLY!) to the FCC, try to work ot a schedule or band use plan
: you can both live with - perhaps YOU use 75 meters when HE is on 20, etc...
:
: OH, and don't forget, even a GOOD, expensive transmitter giving you a 40 over signal on its PRIMARY
: operating frequency will ALSO be giving you an S8 or better on its harmonic frequency - that just
: the state of the art in current transmitter design and production - and THAT'S not the other guys
: fault either!
:
: Regards...

Cooked Micor PAs are rare (many were continuous keyed, full power
for years with no trouble) but expensive with fragile microstrips.
The previous stages would often wink out in succession. Mocom
70 Hi Band PAs were notorious but cheaper to fix, and on UHF
models, drove a Varacter tripler for more trouble. Not bad
considering the extreme beatings many of them took. Mocom
anything is not much worth Duplex efforts if Motracs, Micors or
even Mitreks are cheaply available at swap-meets.

There are lots of properly packaged receivers out there that should
do the job, but you have to take into account other strong signals
besides your own transmitter at most sites. A pass-notch duplexer
alone won't always isolate you enough from other nearby transmitters.

Hello Gary

I have several VHF Micor 65-watt base stations that have blown PA
transistors
Awaiting repair. The last stage on the exciter board is another common
failure
we've experienced.

These are all in commercial service with very low TX duty cycles.

Peter

Hello all,

Just wanted to let everyone know that Sauder Electronics is now online with a secure catalog. This is the same Sauder Electronics you see at Hamfests and at the Dayton shows. Many of you have spoken with Kathy Sauder about getting a website together and she has finally delivered.

Happy browsing, ordering, etc.

I tried a bunch of em on my TS-850SAT and (IMHO) opted for the MC60 in conjunction with the Hi-Boost button in and moderate speech proceesing for DXing and no speech proceesing for rag chewing. In neither case did I find the need for the built in mic amplifier.

However I worked a JA who had superb audio, when I asked what "Japanese mic" he was using, he replied "the handheld supplied with the radio". He also always used Hi-Boost. I found it great also but wanted a desk mic.

248. CW DSP experience - rehooked on amateur radio...

Newsgroup: rec.radio.amateur.equipment
Date: 2002-01-06 02:31:18 UTC
From: jehancoc@pacbell.net
Message-ID: <a95870c1.0201051831.7cfa35bc@posting.google.com>
Source record: 49352

I was an active novice operator 25 years ago. My experience and interest in electronics led me to a very successful career in hi-tech, though I moved away from engineering and went into sales. I gave up amateur radio but always had a receiver of some kind around.

I received one of the popular atomic clocks for Christmas. In studying the way it works, I got out a general coverage receiver but found I couldn't tune below 100khz. The WWVB signal is on 60khz. I picked up the trusty amateur radio handbook looking for a circuit, searched the web, found a few circuits, but couldn't put the handbook down. Now I am building a receiver, from the front back.

In my search for a receiver to build, I came across the article on using DSP with the R2 receiver. Over the past week, I dug out a motorola DSP56309EVM that I received but never tried. I had a little experience with a few DSP5600xEVM's that I used for audio contouring for rooms in my house. Though I understood the math involved, for some reason I wasn't able to get filter coefficients calculated/implemented correctly. I had put them aside a few years ago. This weekend, I powered them up, bought about $300 in books on DSP, figured out where I went wrong with the filter coefficients, and before I knew it, I had a working CW and SSB audio filter that is performing way beyond my expectations.

The DSP56307EVM is running at around 100mhz. I am using 2k of storage to hold my four, 512 point FIR filters, though I am going to move them to 256 points ad store eight. I cycle through them using one of the interupt switches on the EVM. I am also planning to change the code so that I can download filter coefficients through either the serial or parallel port on the EVM.

I ended up designing the filters using Matlab, though I also worked out the coefficients on MS Excel. My frustration in the past was duplicating the exact coefficients in the examples from books. I found that generally, the software used in a couple of the books moved the cutoff points slightly depending on the slope of the filter. This caused my problem. I am using the student version of Matlab that includes the signal and systems toolbox. I don't think the new version of the student edition has the signal toolbox. The student version sells (sold?) for around $99 a few years ago.

The implemented filters on the EVM boards are giving me over 60db of suppression with very sharp shoulders with a 200hz bandwith at 800hz for CW. They are extremely close to the calculations from Matlab.

If anyone is playing with the motorola products and would like to look at what I have, I'll gadly share the code, spreadsheet etc. The EVM modules are getting better all the time.

One question: What happened to all the CW? I've found very, very little (could be my radio). Where is a good place to look? The only activity I've found is around 7035 to 55. I am planning to try QRP but I live up against a hill. I have a great view to the east but the west is blocked.

Thanks.

GE called it "ChannelGuard", at least back in the days of Progress Line mobiles. I don't think it used plug-in reed-type tone-determining elements. I didn't spend enough time looking at one of my old manuals to get all the details. I could do so if someone really wants to know more about it.

The charging circuit IS in the transceiver, so practically any 12 VDC
source will suffice.

"ChannelGuard" was GE's proprietary name for CTCSS, just like
"PrivateLine" was Motorolas name for CTCSS and "QuietChannel" was RCA's
name. While Motorola called their CTCSS reed devices "VibraSponders"
and "Vibrasenders", I think the question is still unanswered if GE or
RCA had a "pet name" for the components which allowed the radio to send
or decode the actual CTCSS signals.

If the same rules apply in the public safety licensing rules and regs.
Point is getting silly any way, now we are arguing for the sake of arguing.

Here is the way I look at it-

Legal or not if somebody is either in danger or injured, or "important"
(define for yourself, I wont define it for you) property is in danger I will
contact the authorities for help. If I have a phone handy (cell or
landline) I will use it. If I don't and there is a radio near I will use
it, first with in spec to raise someone, if not possible I will do whatever
it takes to get help.

: Dave,
:
: Call me. I will send you one to test. You can try it, test it, throw
: it around the house. If you like it, let me know. If you don't, no big
: deal. Use it to stir soup, clean out the cat box and shock test it
: with a hammer then send it back to me. :)

Chris, I know of you as the web page CCrane mentions
that you developed this product. I am the one who started
this thread as I am thinking of buying one.

I would inside a building that gets poor reception. I
use a Sony SW 7600 that can only get the local stations.
But I do like listening to WLS in Chicago which is
some 150 miles north. Can your device help?

I am both posting this and emailing it.... N9NWO

I took my Kenwood D7 portable (the one with the APRS TNC) with me on a business trip. I stuck it in my check thru suitcase. On the way home it got turned on by something in the suitcase. (It's just a push on/off switch.) Of course it happened to be on the APRS freq. When I picked up my suitcase, I could hear packets coming out of it! It was beaconing my last position all the way home from Las Vegas to Chicago! We obviously survived the trip, but I always take the battery off now before I pack it.

Hi n9nwo,

I've been using the Justice with a DX-398 for (almost) a couple of months now and I just love it! True, it's no Kiwa Loop, but it's also not 400 dollars.

I'm in Chicago and at night I can get stations from Boston to Dallas and Denver, and from New Orleans to Toronto-basically all of the stronger stations in the East and Midwest.

In the daytime I can get the stronger stations from surrounding bigger cities like Milwaukee Wi, Grand Rapids Mi, Urbana Il, Cedar Rapids Ia-basically a 100 mile radius.

The optional 20 ft. coax cable allows me to place the unit close to a window and have the radio at my bedside.

Someday I'll get a Kiwa, but for now the Justice is pretty darn rockin'!

fan

Oh, and thanks Chris!

Stick some tape across the contacts, or you're likely to find more than
packets coming out of the suitcase.
I think it has a fuse, but I'm not sure. Blown fuse kinda cramps your style
too.

I carry my D7 whenever I travel. It's been a constant companion since about
a month after they came out.
When I go by air, I pull the battery, tape the contacts, and put it in
checked luggage. I have a small "lunchbox" size hard case that goes inside
the main suitcase, for protection. All my techy toys ride there. Chargers
and such too.

Anyone who has experiensed how to use the "Data-plug" in the rear and
actually use software like "HamScope" ?
The user-guide seems to be somewhat erroneus, and i have no clue of how to
get it done succesfully.
The pin 1 should be audio in
Pin 2 GND
Pin 3 PTT
Pin 4 Data (Sound) out at 9600bps
Pin 5 Data out at 1200 bps.
Pin 6 Squelch-control open at +5v closed at 0 v.

However, closing pin 3 to ground does not activate PTT...
Sound comes out of pin 6 !

Thanks for all help--

T.

The 847 has a port like this for FM data (packet) only. For digital
modes like RTTY etc there is an HF data port. Maybe the 817
has something similar?

Chris,
Thanks for the info.. I do find that using the ferrite bar works much better than the direct connection. Also, since there is a 5kW station about a half mile from my house, using the direct connection, it spills over much of the dial. There is a stronger station on 1130 which probably affects some frequencies in that area too. The difference in reception is very significant over most of the lower part of the dial. I haven't really found that using the select-a-tenna with the Justice makes much if any difference.
Thanks again,
Jeff

It still takes longer than just yanking it out. That gives me a
better chance of catching them.

Most of the thefts from cars around here are fast smash-n-grabs. They
usually don't even bother with stuff that's mounted. Probably has
something to do with TX being one of the rare states where deadly
force is legal to stop certain property crimes.

it was a red or black doobeejoob about 7/8" square and 3 inches long, it was under the CG board in MastrPro's, you took out two screws and the CD board swivelled up on hinges, the CG element was held to the chassis by a clamp, plugged into either a 7 or 9-pin socket like a tube socket (socket on the end of a cable with that black woven-mesh stuff around it), and the part number began with 19A.....

I think there's a Pro buried in the garage somewhere, time to dig

Yep. Two versions..A transister version, and a "deluxe" version using
the MAX232 chip. You could make a "psuedo" SM-20 mike from a rat shack
electret condensor element and save more big $$$. After looking at the
healthy prices they want for a simple cable for the faceplates, I'm
thinking of making one of those myself also if I can find some usable
end connectors. MK

OK. Things are in a better situation this morning to provide some definitive answers.

From "Instructions for General Electric Progress Line Reed Channel Guard Model 4EK10B10" Manual LBI-3463. I could not find any date references within, but I'd guess it was printed in the early 1970s. GE, unlike Motorola, rarely made production changes, so one set of schematics would do for hundreds of radios (I guess the engineering went in before the name went on, or something like that). Therefore, design mods, and dates thereof, are hard to find in GE manuals.

Equipment List shows "Reed Encoder... 3R161-P*" and "Reed Decoder... 3R160-P*" where * is replaced by 10 times the subaudible tone frequency. So the part numbers for a 136.5 tone would be 3R16x-P1365.

Both parts seem to use a standard 7-pin miniature tube pins and sockets. The encoding reed is just a resonant coil. The decoding reed has a set of contacts within that (I guess) close when the tone is decoded, or else are part of the vibrating reed and make contact as the reed swings from side to side. The pinouts seem to be the same, although only the coil terminals are used by the encoding side.

There are two separate deviation pots on the unit, one for each frequency. For whatever reason, they are isolated by a triode section of a 6C10 tube (3 triodes in 1 package Strange beast: 12 pins with an octal-tube-type keyway in the center). This tube does all the encoding work. A 12AX7 and 12AT7 (2 triodes in each) are used in the decode section.

Any more questions, please do not hesitate to ask.

V-e-r-y clean Motorola Triton MP+ marine handheld. Comes with good nicad,
and rapid charger.
This has all the channels domestic and international, scan, all weather
channels, prioriety, etc, etc. It is a top of the line marine handheld.
$150 shipped or trade for VX-5 Yaesu handheld.
Frank 630-653-9090

I've had mine for just about 10 years and haven't had any problems. In fact, although it must have one, I never realized it did until your message.

The parts depots that deal with Kenwood parts are probably the place to order one from. I have the service manual and I can research how one would get to the battery if need be. I don't know if anything other than user frequencies is stored in this memory, so it may lose calibration values and other important identity items if the battery is removed. Icom radios even stored the personality program in RAM, so replacing it meant a trip back to Icom for reprogramming.

Most evenings, and days, too, you can go to 7.0 mhz, and tune upward for 20 or
30 khz, and you should hear numerous cw signals in the lower part of that band.
If you don't, there's probably a reception problem.

There's usually something happening at 10.1-10.150 mhz, too...

After looking thru a Mastr Pro Maintenance Manual, I have come to the conclusion that the only thing GE called the tone network was 'Tone Network'.

I guess they didn't have a snazzy name for it.

The GE part number was 19B205280-G'X'; 'X' was '1' for 71.9 Hz and went to '26' for 203.5 Hz.

>
> Thanks.

I think 40 and 20 probably have the most CW activity. 30 can be good
at times. There is still a bit on the low end of 80 and 160, but not
near as much as 40.
There is still some on 15 and 10 also but not as much as there used to
be. With the new CW requirements, CW will continue to slowly die off.
There is still the hard core, but not nearly as many new CW op's as
there used to be.
At 5 wpm testing , it's pretty much no-code now as far as getting a
ticket. So many don't even bother with it anymore after they get a
ticket. The CW activity started dropping drastically when they gave
novices 10m phone back in the late 80's. It's been fast downhill ever
since. I suspect the tickets will be codeless before too long. BTW, I
used DSP cw filtering on my ic-706g. It is pretty powerful overall.
Some blowby if you don't have real filters, but still a drastic
improvement over no filter at all. Use both, and you have the best of
both worlds. IE: I can use dsp with my already tight filtered TS-830,
and I have super cw performance. I like the steep skirts on the dsp
filters. Like a brick wall if the blowby doesn't get you. And thats
usually only with busy band cdx like a contest or whatever. A real cw
filter will help knock that out. You don't need a real narrow one. 500
hz will do. Of course, many times I prefer a wide pasband for CW ,
like on 160m. I seem to hear weak signals better with a barn door wide
filter, than a narrow one on that band though noise unless someone is
crowding me. I'll usually run the 830 with the ssb filter and just
tighten things up with the VBT. The s/n ratio seems to drop if I get
too tight. MK

AMATEUR RADIO NEWSLINE(tm) REPORT #1273 - January 4 2002
(Total Running Time with RAIN Promo: 24:48)

==========

A NOTE TO THOSE WHO ONLY “READ” AMATEUR RADIO NEWSLINE(tm)

For those of you who only know of the Amateur Radio Newsline (tm) as a text newsletter we would like to invite you to listen to the audio version. This Amateur Radio Newsline (tm) script is actually written for the “spoken word.” It is recorded each by professional broadcasters and is available for private listening or rebroadcast over your repeater. Three methods of delivery are available: Streaming audio using RealAudio, FTP RealAudio, FTP MP3 or dial-in telephone. Please visit our website at http://www.arnewsline.org for a list of telephone numbers (you have to pay your own long distance charges) and links to audio servers providing our voice newscast. On site free FTP Downloads are available at our site by clicking on the newscast number at the top of the page.

de
The Newsline Production Team

==========

Amateur Radio Newsline report number 1273 with a release date of Friday, January 4 2002 to follow in 5-4-3-2-1.

The following is a Q-S-T. A “V-E team” finds a way to test kids in one of the most remote regions of the country and the FCC again says no to expanding PRB-. These stories are first on Amateur Radio Newsline report number 1273 coming your way right now.

(Billboard Cart Here)

HAM RADIO TESTING REACHES WHITE MOUNTAIN ALASKA

Ham radio examinations have finally come to one of the remotest areas of the nation. This, after a team of examiners from the W5YI VEC perform a fly-in examination session in White Mountain Alaska. Amateur Radio Newsline’s Norm Seeley, KI7UP, has the details:

--

White Mountain is a remote fishing village in the far North-West of Alaska. It’s major claim to fame is that its the next to the last checkpoint for the famed Iditarod dog sled race. And it wanted someone to come in and give ham

radio exams.

The closest big city is Nome. White Mountain is only about sixty miles from Nome but its over some rather treacherous terrain. There are no roads in or out and all supplies to White Mountain have to be delivered by plane or boat.

But White Mountain does ham a ham radio operator for its mayor. He is reindeer farmer Tom Gray KL0CQ. And one of its school board members is Eric Morris KL7HT. Both will tell you that a temperature of minus 40 degrees Fahrenheit and a wind-chill factor of minus 100 degrees is not uncommon in winter. These were the conditions faced by a four member W5YI VEC test team when it chartered a plane and flew in on December 11th to administer exams to four adults and fourteen youngsters who were determined to make ham radio a part of their life.

The trip which cost $800 for the flight alone was sponsored by the Seward Peninsula Amateur Radio Club. Braving the weather were examiners Ramon Gandia AL7X, Michael Nurse KL7UJ, Scott Webber AL7RJ and Thomas Busch NL7H. Al four are from Nome. Most of those to be tested came from the Bearing Strait School District’s only inland school. They had all been studying for their Amateur license as part of a search and rescue course. Neither the applicant or the VE team were disappointed. All eighteen passed the Technician class exam.

For the Amateur Radio Newsline, I’m Norm Seeley, KI7UP.

--

Those involved in ham radio testing are keenly aware of the problems faced by remote areas of Alaska. At last July’s VEC Conference in Gettysburg Pennsylvania Jim Wiley KL7CC told the group that many applicants in Alaska are denied n Amateur Radio license exam due to the inaccessibility of their locations or the high cost of travel in that state. (W5YI)

**

HAM RADIO AND THE LAW: FCC SAYS NO ON PRB-1 EXPANSION REQUEST

Ham radio has lost yet another battle against deed restrictions, but the war is not over yet. At least that’s what the ARRL appears to be saying in a bulletin that describes the latest skirmish with the FCC over this politically volatile issue.

In the latest round, the FCC has affirmed a November 2000 staff-level decision that declined to include privately imposed deed covenants, conditions and restrictions under the limited federal preemption known as PRB-1. That’s the federal government policy requires municipalities to ''reasonably accommodate'' amateur communication in antenna-related zoning and regulation.

The ARRL last year appealed to have the full FCC review the earlier denial. The Commission turned down the League's Application for Review December 18 in a Memorandum Opinion and Order released December 26. As a result, it now looks as if the ARRL will bypass any further dealings on this issue with the FCC and will look for congressional relief instead.

The FCC itself even hinted that Congressional action by the ham community might be a next logical step. Its memorandum, opinion and order of dismissal did note that if Congress were to see fit to enact a statutory directive mandating the expansion of the FCC’s reasonable accommodation policy that the Commission would expeditiously act to fulfill its obligation there under. Translated: If Congress tells the FCC to include deed restrictions under the provisions of PRB-1, it will be more than happy to do so. (ARRL)

**

HAM RADIO IN SPACE: PROJECT JJ - HE EAGLE HAS LANDED

AMSAT-NA's newest satellite project, known as Project JJ for the past year, now has a new and official name. This, as AMSAT North America President Robin Haighton, VE3FRH, announces that effective January 1, 2002, the satellite will officially be known as 'Eagle'.

The name Eagle was submitted by Bill Allen, W7US, of Tucson, Arizona. It was selected from a list of forty-five names submitted by twenty-nine satellite operators.

For his winning suggestion, W7US will receive a free dinner at the annual AMSAT dinner held during the Dayton Hamvention. We will have more ham radio space related news later on in this weeks Amateur Radio Newsline report. (AMSAT-NA, ANS)

**

BREAK 1

Welcoming in the new year with ham radio news coming to you from the United States of America. We are the Amateur Radio Newsline, heard on bulletin stations around the world, including the N7VGS repeater serving the Salt River Star Valley Wyoming and congratulating 13 year old Devin Cassity, on becoming the youngest ham in South West Wyoming. Devin is now KD7PHN.

**

EMERGENCY PREPAREDNESS: NORTHERN CAL TOWN CHOOSES HAM RADIO

Ham radio started the year with some very positive public exposure in the Los Angeles Times. The January 1st edition featured an in depth article about a Northern California town that will tap into older technology to prepare for future emergencies.

Worried that a disaster will knock out e-mail and cell phones, Los Altos Hills has decided to turn to its local ham radio community and make it the primary back-up to normal disaster preparedness communications. And as you might expect, the hams are more than ready to oblige

The complete story can be read at the Los Angeles Times website. The complex URL is http://www.latimes.com/news/local/la-000000203jan01.story. (Highlighted by ARNewsline™)

**

AMERICA AT WAR: POPCOMM COLUMNISTS SAYS “DONT TURN THE OTHER CHEEK”

Popular Communications writer Eric Force has some strong words that are obviously aimed at the pacifists who oppose the United States military retaliation against Osuma bin Laden and his al-Quida terrorist network. As a response to those he calls the “do-gooders of the world” who promote turning the other cheek, Force says to look, really look at the attack that brought down New York City’s World Trade Center twin towers. He then says that it could have struck a lot closer to them.

Force says and we quote: “Consider that it could have been you, your mom, dad, brother, sister other relative or a close friend in those planes and buildings who were terrorized, murdered and buried in the rubble.” He adds that just thinking about the incomprehensible terror, suffering and losses incurred by innocent human beings a the cowardly hands of international thugs continues to tear at his heart.

Force has dedicated his latest I-Waves column to the sights and sounds of September 11th that are available on the Internet and to the victims of the tragedy. Its a very compelling article. You can find it starting on page 66 of the January edition of Popular Communications Magazine that’s on newsstands right now. (PopComm)

**

AMERICA AT WAR: FEDS TO AID NYC TV STATION REBUILD

New York television stations will be getting federal help rebuilding transmitters that were destroyed in the September 11th terrorist attack on the World Trade Center. A total of ten New York area stations will receive eight point two million to offset the thirty million to forty million dollar price tag for purchasing and
constructing a new transmission facility.

According to the Broadcasting and Cable newsletter, Senator Charles Schumer managed to secure the funding as addition to emergency aid appropriation for victims of the attacks. As previously reported, there is some speculation that the replacement transmitting facility could be a 1500 to 2000 foot high stand-alone tower constructed near the former site of the Twin Towers. (Broadcasting & Cable)

**

ENFORCEMENT: NAL CANCELED

The FCC has canceled a proposed ten thousand dollar fine that it had issued to Jeffrey Alan Pettrey, This, for his apparent violation of Section 301 of the Communications Act involving operation of an unlicensed radio transmitter.

Back on July 30, 2001, the District Director of the Commission's Columbia, Maryland Field Office issued a Notice of Apparent Liability for Forfeiture in the amount of $10,000 to Pettrey for the infraction. Pettrey filed a response to the N-A-L on August 7, 2001 accompanied by documentation regarding his

inability to pay the proposed fine. After reviewing Pettrey's response, the FCC conclude that cancellation of the proposed $10,000 forfeiture is warranted based on Pettrey’s inability to pay. (FCC)

**

ENFORCEMENT: FCC CANCELS CONVICTED HAMS LICENSE

The FCC has canceled the Amateur license of Kenneth P. Kelly, WT2FBI, of Greensboro North Carolina after Kelly failed to show up for a re-examination. But at the time of the FCC retest order Kelly was otherwise occupied. He was fighting criminal charges in relation to a jamming case in Ohio. We have this report:

--
On November 30, 2001, Kenneth Kelly, the ex-WT2FBI was sentenced to 5 years probation by the Judge H. J. Bressler in a Butler County Ohio court. He had previously been indicted on a 4 th degree felony charge of disrupting public service by his jamming and talking on the Middletown Ohio police radio system.

At his hearing, Kelly agreed to a plea bargain. He admitted his guilt to a reduced charge attempted disrupting public services. At the time the FCC pulled his ham radio ticket Kelly was being held in the Butler County Ohio Jail pending sentencing.

By way of background, a person later proven to be Kelly was first noticed on the Middletown police radio channel the third week of July 2001. Initially the police dispatch radio system was not recording him but that was soon remedied by city radio technicians. After several days of taping, it was observed that the voice on the police radio was similar to one heard on the local 2 meter Amateur frequencies.

Several members of the Dial Radio Club then assisted police by monitoring and taping Kelly on the 2 meter band. Tapes from 2 meters and from the police were then voice printed the aid of computers to check similarities. Dial club members also tried to direction find and locate the signal both on 2 meters and on the police channel.

Through some luck, detectives working with a metro housing police officer and discovered that Kelly was now living in their jurisdiction. After they interviewed him, they felt that he was the person interfering. As the investigation progressed, he admitted to detectives that he may have accidentally transmitted on their frequency by accident. He claimed that his signal may have been mixing with an FM broadcast station and another ham repeater.

But Police did not believe it was accidental, because he was taped trying to talk directly to the police dispatcher and the cars. Later Kelly did admit his guilt and entered into the plea bargain. Now sentence has been passed by both the local court and the FCC.

For the Amateur Radio Newsline, I’m Burt Hicks, WB6MQV, reporting.

--

When he was finally caught Kelly had a Yaesu VX-5 hand held in his possession that had been modified to transmit out of band. The assistance of the Dial Radio Club members is credited with helping to solve this case.

Note: Information and documents from the case can be obtained from the Butler County Ohio Clerk's office or online at: http://www.butlercountyclerk.org/ Click on Butler County Court Records Search. Then enter Kenneth Kelly. (FCC, Dial ARC, others)

**

ENFORCEMENT: MITNICK TO FIGHT TO KEEP HIS HAM LICENSE

Another ham who appears to be getting ready to do battle with the FCC is former computer hacker turned talk show host Kevin David Mitnick, N6NHG. Amateur Radio Newsline’s Bill Pasternak, WA6ITF has the latest:

--

As reported last week, the FCC is challenging Kevin David Mitnick's request to renew his ham radio license. The agency claims that his criminal background raises a substantial and material question of fact as to whether Mitnick possesses the requisite character qualifications to be and remain a commission licensee.

Now, N6NHG has told the U-K Newspaper the Register: "It's just another example of them trying to harass me. Now I've got to spend money to keep a ham license."

Mitnick insists that he has totally abandoned his former ways. The Register article notes that that he was recently called to testify before Congress on federal computer security matters. Also that he spent two days briefing the U-S Commission on National Security on these issues. Mitnick tells the Register that he cannot understand why the government is now questioning his character.

Mitnick is currently the host of the radio program called The Dark Side of the Internet. It airs in the Los Angeles area from 5 to 7 a.m. Sunday mornings over radio station KFI 640 AM. And in a recent appearance on Coast to Coast A-M hosted by Art Bell, W6OBB, Mitnick said that he is hoping for a career in computer security once his term of supervised release from prison has been completed.

For the Amateur Radio Newsline, I’m Bill Pasternak, WA6ITF.

--

The complete Register story and interview with Mitnick is on the web at a rather long and complex U-R-L. You will find it at http://www.theregister.co.uk/content/55/23494.html (Adapted from the Register)

INTERNET SECURITY: CIA GOES OUT OF ENCRYPTION COMPANY FUNDING

And speaking of Internet security, word that a Central Intelligence Agency funded company that allowed Web surfers to browse anonymously has closed. According to news reports, Emeryville California based SafeWeb enabled Internet users to gain access to the World Wide Web and browse sites through its encrypted service. This made their on-line habits and history untraceable. In the 2000 - 2001 fiscal year, SafeWeb received one million dollars in funding from the U-S Central Intelligence Agency's venture capital arm. (published reports)

HAM RADIO BUSINESS: AMATEUR RADIO TRADER CEASES PUBLICATION

Ham radio Internet auction sites may be responsible for a twice a month ham radio equipment sales magazine going away. This, after Amateur Radio Trader magazine announces that it has ceased publication.

According to Editor Barbara Patterson, KF4MMV, the Amateur Radio Trader was no longer a viable product. She says that the firm will be redirecting its resources into other areas.

Meantime, the company has also pulled its amateuradiotrader.com website off line. But unlike other publications which have gone under, in this case subscribers are being reimbursed for any outstanding issues. In addition to handling buy and sell ads, Amateur Radio Trader also donated page space to advertising the annual Newsline Young Ham of the Year award. (ARNewsline™)

**

HAM RADIO HERITAGE: MAKING WCC A PART OF THE FUTURE

A ham is campaigning to preserve part of radios past and have it become a part of the future. This as Lewis Masson, K1LJ-S, says that the town of Chatham Massachusetts should convert the site of radio station WCC into an Amateur Radio station along with a training curriculum to teach the kids in the area about communications technology.

WCC is one of the original Marconi Marine Radio Stations. Masson is an ex-marine telex operator at WCC. The site was recently turned over to the town of Chatham and Masson believes it is important to preserve the operations building as an operating amateur radio station and keep the hotel building as a museum to preserve and display memorabilia.

Masson says over the Internet that he has formed a committee to work on this project and that they are looking for nationwide support for this campaign. If preserving the past as an investment in the future is of interest to you, please contact K1LJS by e-mail to lemasson@juno.com. (Internet)

**

SPECIAL EVENTS: HAM RADIO UNIVERSITY 2002

A reminder the third annual Ham Radio University event takes place on January 20, 2002. Location is the Babylon Long Island New York Town Hall Annex with the doors opening at 9 a-m Eastern time.

Ham Radio University is a day of education about Amateur Radio. This there will be twenty, one-hour presentations with special forums geared to the non-ham as well as the experienced Amateur Radio operator. The focus will be "hands on" with many demonstrations. Besides the forums, there will be tables set up with information about the different groups, ham radio classes, exam session schedules, public service and other activities.

For more information about Ham Radio University, please contact its Chairman Phil Lewis N2MUN by e-mail to n2mun@optonline.net. You can also get in touch with ARRL New York and Long Island Section Manager, George Tranos N2GA by e-mail to n2ga@arrl.org. Also check the Ham Radio University website for a full list of forums, directions and talk-in information. Its in cyberspace at www.arrlhudson.org/nli/hru2002.htm (N2DO)

HAM RADIO RECORDS: BEST OF THE WEST AND VHF CONTEST HONOR ROLLS

Tim Marek, K7XC, says that he has updated W6 / W7 & "Best In The West" VHF Contest Honor Rolls. They are now available at the following web sites.

http://k7xc.tripod.com/VHF_Records/index.html s the stand alone records page. http://k7xc.tripod.com/K7XCweaksignal/ is where individual links can be found to each contest. (VHF Reflector)

**

HAM RADIO SCIENCE: NEW 6 METER PROPAGATION BEACON IN WASHINGTON STATE

Rich Ewing, KO7N reports over the VHF Reflector that Bruce Shurtz, W7BAS, has installed a propagation beacon in gridsquare CN87TG near Kennmore Washington. It operates on 50.069 MHz putting out 10 watts to a 5 element yagi pointing 90 degrees. The beacon is operational 24 hours a day, seven days a week. QSN reports go to W7BAS, at his callbook address. (VHF Reflector)

**

HAM RADIO IN SPACE: VERY FEW LAUNCHES

Peter Guezlow, DB2OS, reported that 2001 has turned out to be the slowest year for space launches in nearly 40 years. Ham radio or otherwise. According to DB2OS, only 58 flights reached orbit, and there was one complete failure.

Guezlow says that historians note that we must look back to 1963 to find a year that produced fewer launches. He says that in 2000 there were 82 launches to orbit plus three failures. By contrast the most productive year was 1984 when 129 launches delivered payloads into orbit.

But there is at least one bright note. Russia successfully placed five satellites into orbit recently after launching them aboard a Zenit rocket. The cargo rocket, carrying three Russian, one Moroccan and one Pakistani satellite, took off from the Baikonur space center in Kazakhstan. (AMSAT, ANS)

**

HAM RADIO IN SPACE: NEW INDIA WEBSITE

The AMSAT-India website has been officially launched recently by the government of India and the Department of Space. VU2POP says that you can check it out by taking your browser over to www.amsatindia.org. (ANS)

CONTESTS: HUNTING LIONS ON THE AIR

The 31st annual Hunting Lions in the Air contest will take place on the weekend January 12th to the 13th. The contest period will be 48 hours and will run from midnight UTC Friday night to midnight UTC Sunday night, and all hams are welcome to participate.

According to its sponsors, the objective of this operating event is to create and foster a spirit of international understanding and cooperation among radio amateurs and members of the Lions Clubs through the use of world-wide radio communication. The contest also commemorates the birthday of Melvin Jones, the founder of the Association of Lions Clubs who was born at Ft. Thomas, Arizona on January 13, 1879. (Q-News)

**

DX

In DX, word that the recently postponed Ducie Island Dxpedition is on again for March. Ducie Island became a DXCC entity last November and it immediately jumped to the top of the most wanted contact list. But rough seas scuttle the first attempt to put it on the air. (RSGB)

Meantime 6 meters continues to be the V-H-F D-X band of choice. On Monday December 31st, Kevin Bishop WB8XX, says that he started hearing O-H-1-X-T at 1300 U-T-C on a backscatter path. From then on until 1620 U-T-C he worked 8 new countries and over thirty new grids in Europe and Asia. (VHF Reflector)

**

STRANGE TECHNOLOGY: ARE CELLPHONES KILLING GHOSTS?

Now, from radio communications to the effect of radio communications on supernatural communications. This, as a British expert who has spent years researching the occult says that cellular and other mobile phones are killing off ghosts. Don Wilbanks KC5MFA has the details:

--

No, we are not kidding you. In fact, Tony Cornell, of the Society for Psychical Research, has told the London Sunday Express that reports of ghost

sightings started to decline when mobile phones were introduced 15 years ago.

According to Cornell, ghost sightings had remained consistent for centuries. In fact, until three years ago the society received one or two new ghost sighting reports every week. But with the introduction of mobile phones 15 years ago, ghost sightings began to decline to the point where they are not receiving any.

And why are there no longer any ghosts being observed? Apparently paranormal events, which many scientists attribute to unusual electrical activity, my be drowned out by the electronic noise produced by cellular telephones and text messaging pager transmitters. And according to the newspaper, the lack of ghost sightings could adversely impact on the nations economy. It says that haunted tourist attractions in Britain could be under threat if the number of cellphones continues to grow from the present figure of about 39 million now in use in the U-K.

Don Wilbanks, KC5MFA.

--

And all of this begs that one question be asked. If ghosts are the spirits of the dead, how can anything actually kill them? (Science Today)

Source record: 49391

Jerry, I think the problem is that all areas of the radio spectrum are dying off. Even your car stereo is being replaced by Satellite radio. The old hams are dying and there are no new kids to learn the hobby. So the FCC figures, ah, we have better people to bust.
I use 11 meters, and I talk skip. I also use the "Free Band". But I stay far away from 12 and 10 meters. I don't, let's say transmit 200 watts on 27.605mhz. Or talk at 27.995 mhz. Or use my Galaxy Turbo to talk on 24 to 25 mhz.
If I guest busted because someone wants to be a Johnny-2-Shoes, than that is stone cold.

What is a good 1kw antenna tuner like the MFJ-Versa Tuner, that has outputs for balanced line wire(with balun), long wire, and coax?? Or is MFJ the best.

Thanks

Frank

MFJ is OK!
Look for something with quality Capacitors and inductor. My preference is switched inductor because a roller is nice but the rollerbecomes oxidized after a while requiring cleaning. The switched inductors use a ceramic switch and the contacts are plated to help prevent this and are somewhat self cleaning when the wiper switches from one tap to the other.

I have nothing against rollers but they need a little attention from time to time to prevent higher insertion loses.

Dentron makes a nice 1KW tuner that does it all called the Super Tuner.

If by chance your looking for a tuner to tun in the CB bands then why bother. It's really not worth it since your on just one band. Your matching network should come from your antenna.

Hi all. I'm looking for a functional M57726 RF Amplifier module,
doesn't have to be new. Yes, I know I can get them for $60 plus
shipping from RF Parts, but I'd like to find one a lot less expensive.
(It doesn't make sense to put a $60 module in a radio only worth about
$90 on a good day.)

So, what have you? Maybe you've got a junker with a known good
module?

I look forward to your email or call; cosmetics DON'T matter to me on
this one.

Thanks;

a CR-2032 lithium battery is an easily available item in most areas....
check a local camera shop or even the supermarket... the one in our area
carries them...

if your radio requires a battery with attached contacts to solder into the
circuit board, you're probably better off buying it from yaesu, even though
it might cost more, because it's easy to kill the battery with the heat from
soldering...

hope this helps...

>
Somebody's got their story wrong. As I recall it was the passband
tuning that got them into a legal problem and was removed in the 765.
The 761 does not use a mechanical filter. The band stacking registers
in the 765 is probably the most significant difference (i.e. when you
select a band it returns to the last used frequency on that band).

304. Re: Antenna tuners

Well, I would not own an MFJ tuner if they paid me a hundred bucks to use
it.
Sadly, you have to look at older Drake, or Heathkit etc. tuners.
I have two tuners on ebay now, you can take a look at them. The Heathkit is
better, but I prefer the Swan so that I don't have to tune forever with a
roller inductor. You can see the two here.....
http://cgi6.ebay.com/aw-cgi/eBayISAPI.dll?MfcISAPICommand=ViewListedItems&us
erid=ham@cybercomm.net&include=0&since=-1&sort=3&rows=25

But I will repeat what another said... If it is for CB, it does not make any
sense to have a tuner.

The 761 had a passband tuning scheme that copied a patented system that was in use by, I believe, Kenwood, and Icom got sued. They revised the rig as the 765; it came out about 1990; it has if shift, but no passband tuning. They also made some refinements -- the 765 has a quieter synthesizer (the same as the 781's), and it handles break-in cw keying in a smoother manner.

That's strange since the 761 and 765 have the exact same PLL unit except the
761 came stock with the TCXO and the 765 has a plain xtal.

The PBT is re-enabled by 2 diodes and a jumper wire...

I had them both. I always felt the 761 had a better filter combo in the FL-80 and the FL-44A, both expensive crystal filters. The 765 came with the cheap FL-30 and the FL-96 not cheap but I dont think as good as the FL-44. There was a issue with the PBT in the 765 and was partly fixed with a little mod but I dont think the PBT was ever as effective as on the 761. The synthisizer is better in the 765, as it used DDS (direct digital Synthisis). I think the blocking dynamic range numbers were better in the 765 too.

I used the information on K6XX's website, search for BBox.

You may be looking at the pins the wrong way around, for PSK31 I just
wired DATA OUT to SOUND in
DATA IN to SOUND OUT and PTT on the 817 to the collector of a 2n3904,
whose base came from DTR, pin 4 of a 9 pin D-type connected to a
COMport. The ground of the transistor, PIN 5 of the 9 pin and shields
of the two 3.5 MM jacks going to the sound card goto to ground on the
FT817.

Unfortunately I would have to disassemble my plugs to figure out which
way around the pins are numbered.

It does work nicely on digipan...

Uniden and CES, Part II
Posted on 01/05/2002 17:53 EST

Marcel recently posted the full press releas regarding the teaser headlines he posted earlier today:

UNIDEN DEBUTS NEW APCO 25 DIGITAL
SCANNER MODELS

Electronics Giant to Sell Software to Customize
Monitoring Experience

Uniden lifts the curtain on its long-anticipated
APCO 25 digital scanner models.

LAS VEGAS (January 8) ï¿½ Uniden America
Corporation today unveiled its new digital scanner
line for 2002, including the consumer electronics
leaderï¿½s much-anticipated base and handheld
APCO 25 digital scanning models.

Speaking at CES, product manager Scott
Carpenter showcased the new scanner products,
underscoring the companyï¿½s commitment to
keeping its customers at the forefront of scanning
technology. ï¿½Our retailers have been pushing us
for a Uniden APCO 25 product for months, and
our new BC250D handheld and our BC785D
base/mobile scanning unit represent the fulfillment
of our promise,ï¿½ Carpenter said. ï¿½With the ability
to monitor conventional, trunked and APCO 25
conventional and trunked systems these models are
state-of-the-art radio scanners.

According to Uniden representatives, the Bearcat
BC250D and the Bearcat BC785D models, which
are slated to hit shelves in late 2002, offer 1,100
channels, 10 banks and a frequency range of
25MHz ï¿½ 1300MHz. The BC250D comprises all
of the features of Unidenï¿½s market-leading BC780
XLT in a handheld model, plus adds APCO 25
capability and an additional 600 channels.

Users of both models must purchase an APCO 25
card, the BCi25D, separately. ï¿½Weï¿½re pleased to

be bringing these great Bearcat APCO 25 units to market,ï¿½ Carpenter said. ï¿½We expect more big cities to migrate to the APCO 25 digital technology, like Los Angeles did this past year, to ensure agency interoperability among police, fire, EMTs and the like ï¿½ and we know news organizations, businesses and consumers will want to monitor their signals.ï¿½

Uniden officials stressed that APCO 25 digital scanning technology simply gives users the ability to monitor the day-to-day activities and signals of standard city and government service departments ï¿½ but in no way allows users to monitor encrypted signals from national and local security organizations.

In a separate announcement Uniden also announced its plans to market its own easy-to-use scanner programming software, which it is demonstrating in its booth at this winterï¿½s annual Consumer Electronics Show in Las Vegas. The software will allow the users of all Uniden scanners with data ports to easily program frequencies into the channels and banks of their scanner.

About Uniden
Uniden America Corporation, the North American subsidiary of Japan based Uniden Corporation, manufactures and markets wireless consumer electronic products including cordless telephones, business telecommunications systems, multimedia communications devices, scanner radios, CB radios, FRS, Marine radios and other wireless personal communications products. Based in Fort Worth, Texas, Uniden sells it products through dealers and distributors throughout North, Central and South America.

Very interesting! So Uniden will not only be offering two new trunking scanners (which are just like the current BC780XLT) but users wanting to monitor digital systems will have to buy the optional plug-in card to do so.

Thanks for the posting, Marcel, and to Karl Dahlquist and Peter Kirk for forwarding it to us as well!
http://www.strongsignals.net/access/news/news.cgi?type=single&section=radio&entry=263

So if you want to listen to the police, this is the way to do it. Otherwise you are out in the cold. And most gun owners seem to

want to keep an eye on the cops, for whatever
reason.

While there are 'cheaper' adaptors out there, the contact below will get
you a fellow who makes a sma to bnc adaptor for your radio.
I've purchased one from him for my yaesu ft-50,and find it to be well
worth the cost. (neighborhood of 13 bucks and some change with shipping).
The reason I'd recommend going to the better adaptor, is stephens adaptor
makes some provisions for sharing the load of the bnc antenna, reducing
stress on the radio, and providing for a longer life of the connector.
I'm using a diamond high-gain antenna, 4 times the size of my ht, and not
had a problem at all.
Contact Stephen at gulyas@earthlink.net and tell him what you need.
He's very pleasant to deal with.

I fly regularly. I always carry a handheld with me in my laptop case. I
also carry a cell phone. I have been asked to turn on my computer, open
my cell phone, but never been questioned about my ham radio.

What is the problem, you carry your ham license with you. You have ID
stating it is legal for you to use the radio.

322. Wanted: Heath Apache or Marauder (D/FW area)

Newsgroup: rec.radio.amateur.equipment
Date: 2002-01-07 17:47:55 UTC

My Heath Mohawk receiver needs a mate...

Looking for a Heath Apache or Marauder transmitter. Must be complete and in decent shape, with NO extra holes drilled in the front panel and NO undocumented modifications. Prefer a working rig but not afraid to tackle a reasonable fixer-upper. Since those monsters are so big and heavy, I'd prefer to find one somewhere in or near the Dallas / Fort Worth are and just pick it up in person to save big bucks on shipping (and prevent shipping damage!).

Also looking for some restoration parts for the Mohawk, such as a front panel with nice markings and no extra holes, a VFO dial drum that isn't shattered, one small satin-chrome knob (missing one off of the "Calibrate" control), and the bellcrank linkage used on the "Selectivity" switch.

For balanced line, a tuner with a torrodial balun can be very ineficient at some matching conditions.

If you want a tuner designed for balanced line look for a Johnson Matchbox. The 275 watt units are usually available on Ebay. $50 for an ugly one. $100 for a pretty one. The 1KW ones go for 200 to 350.

I bought two ugly 275's, combined the parts and have one Really ugly one and one good one. I recently enhanced The really ugly one with some extra parts that had to go through the front panel, but gave it a wider range.

The TK-705 uses the mic jack for programming, maybe the 706 does also.
I have the manual for the 705 not the 706.

Grundig YB400 Receiver - HF Ham Bands, AM/FM, SW Radio - Ebay

This is a magnificent radio design. It receives all of the HF ham bands (SSB, CW, AM), as well as the popular short wave frequencies and the standard AM/FM broadcast frequencies. This particular radio has received "light use" and is in excellent condition. The Grundig Yacht Boy 400 World Receiver has many features, and comes with the carrying case, original instruction/operator's manual, earphone, and wind-up antenna. Nice size for packing or carrying: 8"x 5" in carrying case.

This is a great receiver to take on vacations or field trips.

Features:
FM/MW/LW/SW receiver, USB/LSB AM Dual Conversion PLL synthesizer, Digital Direct Tuning, 40-Station Memories, Alarm/Sleep Timer, World Time Clock with Second Time Zone, LCD Display, Data Monitor, Signal Strength Indicator, External Antenna Socket, Built-in Telescoping Antenna, Earphone Jack. Power: 6-AA batteries.

For auction on Ebay, click on:
http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=1317550463

I will be glad to provide additional information. Contact me at w4tq@mindspring.com

Fellow hams:

Okay! Now that I got your attention, I bought for $40 a bunch of PC power supplies, and I am curious about how I can combine them into one supply!

They have a 25amp 5V output on each one, and an 8amp 12V output on each one.

I am curious to know what or how I can:

(a) combine the 5V outputs from 3 supplies to yield me a combined 25amp 15V source (presuming three are powered up at once)?

(b) take 3 8amp 12V outputs and merge them into a single 24amp 12V output

I have PC supplies out the a$$, and wish to combine them to build a massive 200amp supply, any ideas how to do this? I long ago forgot my electronics theory with regard to power supplies, and I think you need diodes or something to keep the electricity from flowing from one supply to the other.

I have two HT750 UHF radios for sale.

Model Number for Both Radios: AAH25RDC9AA2AN

Both in Excellent / Like New Operation. One has 'eng' scratched into
the front plastic and the other is in 'like new' condition.
Both Radios are 4 Channel HTs. Both come with: Radio, Lithium-Ion
Battery with Belt Clip, and Antenna. Plus a desktop Charger.

$520 for the pair.

Jonathan

Source record: 49198

Folks,

I'm interested in getting a report from a Kenwood TS-440 owner who has an SSB narrow filter installed (part YK-88SN).

The passband for the filter is 1.8khz, and its 2.2khz without it.

Does the filter improve the received SSB signal significantly?

I thought I might get one, just to have it. I already added the narrow CW filter to my rig. I was thinking of times when the QRN was running above normal...and I had an already weak SSB QSO going....

Appreciate any comments.

Kenwood TS-430S HF Transceiver / General Purpose Receiver

Accessories Installed IN radio:
Inrad 400HZ CW Filter (88H400BC)
Inrad 6.0kHZ AM Filter (88H6.0AC)
Kenwood-Trio (stock) SSB Filter (YK88S)
FM-430 FM Board

Additional Accessories:
MB-430 Mobile Bracket
Power Cord
Kenwood MC-42S Hand Mic w/Up-Down Freq. Control
Shure (GE Labeled) Desk Mic, wired for Kenwood
Cheepie Key on wood base
Realistic (aka Radio Shack) External Speaker w/cord & plug
Original TS-430S shipping box
Copy of users manual AND copy of Service Manual AND all
Kenwood Service Bulletin's AND QST hints & tricks etc., all in a nice
binder.

I have owned this radio fro about 2 1/2 years, and have made contacts
around the world on 40-10M, and a few contacts on 80M, although I
never really had an antenna for it! I've gotten many compliments on
the transmitted audio quality using the Shure desk mic, and the
Kenwood receiver is legendary. This is a great first HF radio, or a
great back-up.

Cosmetically, the radio was repainted by a previous owner a
copper-brown. The front plate is in good, but used condition, with all
labeling intact and readable. The radio is 100% operational, with no
known problems, however it is sold as-is.

I am asking $450.00 with all accessories as listed.

Also available is the matching power supply, a Kenwood PS-30 for
$100.00 and a MFJ-949E Versa Tuner II cross needle 300W Tuner for
$70.00.

Buyer pays shipping, and I'll ship it anywhere you want to pay to have
it shipped!

You are quite correct about needing to isolate the supplies outputs from one another. This is especially important with switchers. Another problem or two that you are likely to have, depending on the design of any particular supply, is that a) some supplies don't even put out a voltage unless there is a load applied when they first power up and b) most computer power supplies put out 12V plus or minus 1%.. and are not adjustable, so you are already under voltage for your 13.8V rigs.. and then you put in the isolation diodes and drop it to ~11.4V. Seriesing the 5V supplies for 15V would be trickier still because of the differing load regulations for the different supplies..

Hmm, most people assume FS means For Sale....

Well, now for the answer you're not wanting to hear, it'll be nearly impossible to combine them into a massive output supply. The biggest problem you run into is how to get the voltage regulation to synchronize between them all (none will be at the same voltage, so some will carry more of the load than others, then those will over-current and shutdown or fry, allowing the next ones to do the same shortly thereafter). This is a big problem for high reliability systems with multiple supplies, they use all sorts of fancy current sharing schemes.

First off, you need to isolate all the outputs from each other with diodes so the lower voltage ones don't suck current from the higher ones trying to get the voltage down to what they think it should be (the higher ones will boost their output to compensate for the "load"). But, you still have the problem with the higher voltage ones taking tall the load. Without serious modifications to the voltage regulation circuits, it just won't work...

No, actually, since there is no ban on scanners with cellular receive, just a mandate that no more will be made after a given date. It would be more like the machine gun "ban" where those that already exist are grandfathered, but no more are allowed.

Message-ID: <3C3B4119.5156C6CD@ridgefield.sdr.slb.com>
Source record: 49221

I have an option to purchase a Tempo 2020 with external VFO and speaker
with a separate Antenna tuner. The selling price is $250. It appears to
be in very good condition.

I am a newbe Ham with a general license. I have 2 kids, the 10 yr old
has her Tech ticket,
the 7yr old is presently taking a tech course along with her mother.

What I need to know is: is this a good deal and 2nd if this a fairly
easy rig to operate?
If my kids & wife want to use it (listen on it) is there much of a
chance they (or I) could do damage to it?
(I know the limits that a tech license has in HF.)

For that matter have the newer rigs changed much (in operation) compared
to this one?

TIA,

Mike (KB1GAX)

This isn't meant as a personal attack or anything, so please don't get
mad.

Why? I've always been curious why someone would want a transmitter that
worked on frequencies they weren't licenced to transmit on.

I go into malls, restaurants, etc., and just listen to people.
They'll say the most interesting things when they think no one is
listening. Of course most of the conversations are mundane and boring
and uninteresting, but then so are most police/fire transmissions.
Why would anyone want to eavesdrop on them?

TO WHOM IT MAY CONCERN:

I posted messages in several newsgroups last month in reference to a Jordan Arndt, VE2SWL, of Calgary, AB, Canada, concerning his failure to ship items which I had paid for. In spite of my filing mail and wire fraud charges against Mr. Arndt, I told him that I would place an information bulletin in the newsgroups retracting the statements I made if I ever received my merchandise.

Mr. Arndt has been kind enough to allow me to pay for shipping a second time via Federal Express, and he allowed FedEx to come by his home at my expense to retrieve my merchandise and bring it to me. It arrived about a week ago, and was exactly what I had purchased.

I had originally paid for the items around October 15th, and it just took my paying shipping a second time, many threatening letters, and two and a half months for my goods to arrive. But Mr. Arndt DID finally come through on my items, so I can't fault him on the items. The items I ordered WERE in the box, and they WERE in good condition.

So, instead of stealing my money for goods, it appears that he actually only stole my money for shipping. I apologize to Mr. Arndt for accusing him of stealing something he didn't steal.

Mr. Arndt was nice enough to explain that he had been undergoing financial difficulties and that he needed to redirect all the money I sent him for goods and shipping to pay his rent, buy food, etc. and as a result, no longer had the funds I sent him to pay for shipment of my items.

Mr. Arndt, if you are reading this, I apologize for accusing you of stealing -ALL- of my money. I now know you only intended to steal -PART- of it. Please excuse me for placing false information prior bulletin concerning your theft. I take back every last word.

Thank you all for taking the time to read this,

Webster D. Williams, KR4WM in Myrtle Beach, SC

I have a Heathkit SB-220 amp for sale. Has just been professionally checked out and is in great shape. Has several of the mods and comes with
a spare 3-500z tube. Asking $450 location is in Chesapeake,Virginia willing to ship anywhere in usa.If your looking for a great amplifier that will give you years of service this is the one that will work for you.

380. Re: mods for ICOM 75x series?

Newsgroup: rec.radio.amateur.equipment
Date: 2002-01-08 23:36:20 UTC
From: Andy La Varre <alavarre@nntp.amail.lavarre.org>
Message-ID: <u3n2ci2mjg84dd@corp.supernews.com>
Source record: 49235

Actually, now that I think about it:

1) You are authorised the use of *any frequency for purposes of resolving distress.
2) The only use I have for frequencies other than Amateur bands are distress frequencies.
3) The reason for "type accepted" regulations is, objectively, to ensure that proper frequency control is imposed on persons generally not considered trained to impose such controls on themselves. For this reason amateur gear is not required to be "type accepted" while marine gear is.
a) ICOM builds their gear to specs that far exceed type acceptance specs. Snipping a wire to extend the range will not violate these.

4) Cynically, the type accepted rules keep a lot of people off welfare. Snipping will not resolve that.

Hope this responsibly answers the mail.

Cheers, Andy

Hehe!

I bet he'll find something to "plug" up that hole with! LOL! Reminds me of a friend who is a ham and spend most of his life in the radio repair business. His shop is a veritable museum of ham rigs, old Motorolas, CB sets, and big AM transmitters. Several summers ago, he asked me to help him clean out some of the stuff because he couldn't get into the garage door of the shop. So I spent several weekends helping James clean out and haul off old worthless stuff. The shop's floor hadn't seen daylight in years! After clearing out a fair amount of space, we swept and sweated, and finally it was done. The next week, there was another big AM trans-mitter there awaiting repair. Once that transmitter found a place there in front of the door, things rapidly went downhill! Soon there was another.....and another.....and another.....until it was filled right back up! We again cleaned it out (or rearranged it?). Once again it filled up with radio "toys". The third time, he filled it up yet again. So far, I have refused to help him move that heavy stuff again--unless he promises not to fill up that hole again! LOL!

I'd really like to sell this here vs. eBay so:

Surplus to my needs, a beautiful example of the Original chrome Bug. Serial number 246K, red bug on number plate.

Plexiglass presentation case. New finger pieces and "jewel". This bug is in beautiful shape and would make an excellent addition to your collection or your shack.

Still almost $300 from Vibroplex new.

$150 including shipping CONUS

Larry, N0XB
Northfield, MN

Bob,

I well remember the old party lines, and I understand that there are a few places that still have them. It was quite a job getting the line away from the resident hens who had nothing better to do than to gab all day--or listen in to others' conversations. We kids used to end our phone conversations (when we WERE lucky enough to get the line) with "I hope you got yer ears full, Mrs. Davis", knowing that she wouldn't tell our parents because the question then would be, "What were you doing listening in". I once was annoyed with one of these hens, so I got one of these steel coaches' whistles and blew it as hard as I could into the phone. CLICK!!

One Saturday night, stranded at home while my folks were out and I couldn't get the car (remember when you had to ask Dad for the car?), a buddy and I were trying to call some girls. Of course, Mrs. Davis (not her real name) and Mrs. Sims were yakking away (I told her such-n-such, and she said that so n so said to tell whatsisname, but not to tell fussbudget, I said, she said, he said, on and on.) Larry kept picking up the phone, and it went on for an hour. Finally, Larry yelled into the mike, "HEY LADY, YOUR BEANS ARE BURNING!" Although I wasn't on the phone I hear Mrs. Sims scream, "OH MY GOODNESS !!!" Then there was a distinct CLICK and brrrrrrrrrrrrr as the dial tone came on. We got the phone and kept it away from the gossips. Boy, did we ever get some wicked stares at church Sunday morning! LOL!

I am not sure if this is the rig with a tube that is hard to come by and could be very expensive to replace. I don't remember the tube but it is on that has all numbers instead of the more common combination of a number, couple of leters and another number. It is not a big power tube but one of the smaller ones.

I find it does help quite a bit. The QRM can be cut down considerably if
that's a problem. It generally cuts down on some of the high-end "hiss" making
the SSB signal a bit easier on my ears.

Your mileage mar vary...

Back before the ECPA (the law that made listening to cell calls a crime)
I overheard a conversation between cop and his superior getting their stories
straight to explain how a young man ended up dead. Shot in the back.
While pinned on the ground by the feet of several officers and handcuffed.
I heard the police dispatch and some funny comments and started hunting
the cell call that I suspected I would find. The comms started out on the
police radio, moved to a ham radio and then to a cell call. The cops got away
with murder.
In the USA many cops are running private comms on cell/pcs to avoid being
taped by the department. Almost every PD records all radio traffic on their
radio system, and cell/PCS allow cops to escape the eye and ears of both the
public and thier bosses, who, when bad cops turn up, can claim "But there was
no sign we had a bad apple".

And while it is illegal for anyone to listen to any cell converstain without a
court order, I know for a fact that a ceratin PD had several (5+) Pro2004
modified to allow cell reception after the ECPA became law. I know the tech
who did the mods, he got in a moinor jam and bought his way out by providing
the LEO with another tool to break the law.
And I am sure that the cops never, ever monitored cells calls without a
warrent.
Yea, and the Easter Bunny is laying those chocolate eggs (BTW did you know
theat Cadbery has their HQ in Hobat Tasmania?) for Easter.
Never ever trust the cops.
They violate laws every cahnce they get.
And almost always get away with their crimes.
Only bad luck or stupditiy bring their collective guilt to public scrutiny.

Yo Web...

I'm after Dave Munroe (or whatever he calls himself these days).... In Keene, Ontario, Canada.
Pay double ??? For what you agreed to??? Is Canada the breeding ground for the new internet rip-off artists?? Perhaps, but I wont stand for it. The individual I dealt with, dishman@northshells.net, swl@northshells.net, speedy@northshells.net have one thing in common.... northshells.net... and they have been put on notice. I've taken my case to the FBI and US Postal Service and have hired an investigator in Ontario to nail this guy. I've had many honorable dealings on the net but as of late our dear, loving, neighbors, up north, are more than willing to rip us off. Re-directing of monies ????? Good Lord !!! Is this the new welfare ???? Internet fraud to pay the bills ??? Lock and Load !!!! Let's shut these suckers down !!!!!!! Call the FBI...They are on the net.... Contact the Postal Service !!!! Argh !! Yer breakin my friggin nuts here.... Pay double... It would be cheaper if a bunch of us "Canuc trustin but got ripped off types" would take a bus up north with some Louisvilles and do some serious research . (If you know what I mean.) These "A" holes believe the US-Canada boarder affords them some protection.
Yo !!! Canada !!! I'm declarin' war !!! Thieving rodents !!! Yer goin down !!!!
NUKE CANADA !!! The new welfare state !!!!

I am looking for opinions on what would be the best microphone for this HF rig. I was
thinking of getting a electrovoice RE-20 has anyone used this professional broadcast microphone on a HF rig. How would or how did it perform. Please let me know which microphone
you think is best for this application.

Hello Anybody,

Would you have a kenwood ma-5 mobile antenna system for sale? Please
let me know.

Thank you,
Anthony A. Andrianos

Why would you want to use a broadcast microphone on a ham radio rig?

Go see a demonstration by Bob Heil, K9EID, to understand that
question. Then buy a Heil mike.

Showtime,
Try a Heil HC-5. Turn on the compression but run it at
a very low level, (a sharp whistle should only produce one
'dot' on the scale). Mic gain set about 9 o'clock. It doesn't
get any better than that. DON'T use a 'studio' mic. DON'T
use wide (or no) filtering. DON'T believe all the 'bull' about
'broadcast quality'...
'Doc

>for that kind of money.
Good thinking.
The price is about the same as the original, but the manual contains
various sizes of PCB-layouts in multiple colors. If they are offering
B&W copies, a lot of info on the PCB's will be lost. If they offer
colorcopies, it'll be no problem.

Sorry I cannot be of more help, I know of no source. Good luck!

Bart.

If I was you, I'd spend a little bit more and get an older ICOM or Kenwood that are either all solid state or possibly have 6146 finals. I've seen ICOM 735's going for $350, and Kenwood's with tube finals even less. The Tempo is really old (Likely 1980) and a rather low tech design.

Some of the SGC/Icom/Yaesu black box auto tuners do hf & 6. Otherwise, I'd just get a cheapo mfj 6-meter tuner, and look for a separate hf job.

410. Problems w/Samlec switching PS - any tips?

Newsgroup: rec.radio.amateur.equipment
Date: 2002-01-09 13:54:56 UTC
From: Roger Stierman <r-stierman@ti.com>
Message-ID: <a1hi2t$3j9$1@tilde.csc.ti.com>
Source record: 49263

My Samlec 1223 (yes, the cheapie from RS) switching supply voltage is starting to droop when current draw is 3 amps or more. My knowledge of switching supplies is theoretical, not practical (yet) - I suspect some capacitors are failing; anybody have any experience or tips for which to check first? Yes, I know voltages inside are high so I'm being careful.

Thanks & Best Regards,
Roger Stierman WA0VYU

Hey "Finalquest" <finalquest@earthlink.net> your real name wouldn't be Osama bin drinkin' would it?

Nuke Canada? Are you really THAT STUPID? Are you going to kill millions of nice innocent people just because your stupid and lost some money to ONE thief?

Why don't you just drive up to Canada and pay Mr. Munroe a visit in person, that in it self will suprise the hell out of him. And while your there in Ontario drop by the RCMP post and talk it over with them? I'm sure they would like to know about him. But don't mention you posted that trash about nuking Canada, or they might just take a cold hard look at YOUR ACTIVITIES!

I'm damn glad you don't have control over ANY of our national defense structure!! BTW if your a ham please turn in your license, you don't deserve to be one!

416. MFJ Grandmaster Keyer Question

Newsgroup: rec.radio.amateur.equipment
Date: 2002-01-09 18:25:58 UTC
From: rmead100@aol.com
Message-ID: <20020109132558.15037.00000635@mb-ba.aol.com>
Source record: 49270

Greetings to all

I have an mfj 484c Keyer that I got a while back at a hamfest. Although I have learned how to clear and to program the memories, they revert to what was in them originally (when I bought it) whenever the power switch is turned off.

Does anyone know how to keep stored what you have just entered??There must be a way to do that.

Thanks
Randy K8BUX

I have a Tempo 2020, for the past 20 years, I sent it out once to be
calibrated, the radio is still in use.
It has been a real good radio, even ran it mobile
I will tell you this the radio needs calibration again but I can not find
anyone to do it
Henry Radio who made the radio has not service it for the past 10 years

420. ACOM 1000a problems HELP!

Newsgroup: rec.radio.amateur.equipment
Date: 2002-01-09 20:14:51 UTC
From: Ken <kenkopp@qwest.net>
Message-ID: <4x1%7.6$tG2.14049@news.uswest.net>
Source record: 49275

My friend, W7KEV, has recently purchased a new 1000a. I was fortunate enough to be present when he unboxed it & powered it up for the first time. Sadly, it immediately had a grid current fault. Cycling the power a couple of times cleared it. The amp totally failed after a couple of weeks. To the USA reps credit the amp was exchanged for another new one. To our astonishment the new one has now failed in the same fashion. To say that my friend is frustrated would be an understatement. Would anyone with relevant experience please comment as to whether or not this is some chronic failure or design problem? He likes the amp very much but after two new ones failing in as many months he is understandably concerned about quality & longevity. Thanks in advance for any help! 73 de Ken, KI7HM

424. Amateur Equipment Sad Story....

Newsgroup: rec.radio.amateur.equipment
Date: 2002-01-09 21:19:21 UTC
From: alx4443@aol.comlj.ca
Message-ID: <20020109161921.28420.00000519@mb-mp.aol.com>
Source record: 49279

HERE'S A SAD STORY:
Imagine for a sec that the "Amateur radio guy" mentality filtered into other retail items like shoes, for example. If , like hams, 90-something percent of
shoe wearers wouldn't just go to a local place for $89-150 shoes/sneakers when needed, but rather would find "shoe" magazines"& internet sites, & then call every discounters 800#
coast to coast to shave that last "nickle" off the price of those shoes.
Soon most "local shoe dealers" would disappear & stores that once carried shoes as part of their lines would no longer do so, due to lack of profit. (sounds like what happened to ham stores over the 1970'/80's)
With a few exceptions, all the US & European shoe makers would disappear, being replaced by stuff made in the orient. Soon there would only be a half-dozen or less major shoe makers, their shoes being sold mostly thru less than one or two mail order discount dealers per state.
Due to the fact that all retail shoe dealers still around would have to have "rock bottom" little profit margin prices, or lose their sale to some other 800 number, a general rule of high "restocking fees" & general lack of return privlidges would become the norm in the shoe industry. ....
Then of course, years later, a middle aged man would tell his teen-aged son(who was now ready
to pay for his first pair of sneakers) how, "in the old days", son, I remember that
their were many local places you could walk in & actually buy, & see Shoe-gear"..... "Wow,
Dad, really?" says the son, as he opens up the sneaker magazine , calling 20 different 800 numbers to see if he can beat another buck or two off those $89 sneakers ...."
Reprint for the new Year......

Source record: 49280

The really sad part is that its often not a buck or two off $89, it's more like $200 off of $3000. Heck, you'd be better off buying from the 800 number and then giving the local guy a $100 donation. I blame the situation on the mfgs. The poor local guy pays more for the rig than the 800 number place because he doesn't buy as many.

I'll second that. The one my dad bought when I was in high school was an absolute piece of junk, especially on CW. We had to make some changes to get decent keying (as I recall, the rise and fall time was really slow - at least no key clicks - but nobody could copy you above 10 wpm). It failed a couple of times as well, having various problems I can't remember now.

My dad offered me that piece of junk about a year ago (I declined, since I now use an FT1000D, FT847, or Omni D). I was just thinking about it the other day, in fact, wondering if it would be cruel to even give it away to somebody. If you are determined to get this particular rig, give me a buzz and maybe you can cut a deal with my Dad for the price of shipping. :-)

Every time I turn my 920 on it makes a single , loud click noise when nothing is being done to it . It doesn't do it as soon as I turn the rig on . It does it after its been on for several minutes or several hours . Once it makes the click, a couple or several hours later it does it again . The click sounds a lot like the click you hear when you change bands or turn the antenna tuner off and on, BUT A LOT LOUDER . I can hear it when I have the head phones on for example . Once I was turning the low cut/ High cut controls and it done the click thing and I felt it through the knobs . I don't know, maybe its nothing , but it doesn't sound like nothing . Thanks, Sam kg4heb, kg4heb@psknet.com

Maybe it is a little dumb question . But, by not grounding your transceiver can you cause any damage to the transceiver . I know by not grounding the rig it will cause interference to like the TV and pc and stuff but will it cause any damage to the rig itself ? I don't think it will , but I thought I would ask the experts to be on the safe side . Thanks, Sam kg4heb@psknet.com

I changed from the stock handheld mike to an amplified
D-104 with my TS-850 and got good reports from the
"golden ears" AM crowd here in Arizona. They made me
solemnly vow never to go back to the old microphone.

Many people may be willing to spend a few bucks more to support the local guy. I often do. But when it comes to paying an extra $200 plus $200 in sales tax - and for the extra $400 you get the privilege of driving 15 miles in traffic and lugging it home. The 800 number - lower cost, no sales tax, no shipping charges and in 2 or 3 days you find it setting on your door step. The local guys either have to find a way to compete or they are history. Not many people are willing to plunk down an extra $400 as a donation.

That's capitalism. If the locals can't compete, why spend the extra couple of hundred dollars on their products? I'd rather deal over the net or via "800 numbers" than to get gouged. If that means the loss of local businesses, so be it.

Exactly. I won't quibble over a few bucks, and I'd rather do my business face to face, but when it comes to saving $200 or more PLUS not paying the sales tax (another $100+), I have to go with the online or 800 guys. Who could afford not to?

Yep... two actually.
1. Leave it on all the time (won't hurt it)
2. Replace the 9V battery inside... and it'll hold memory until battery goes
dead.

> Yeah, he "is" comparing an apple to an apple, just a bigger apple. The
> analogy is the same.

Ahhh...No, the anology breaks down is several vvery important places.
The thought may be the same, but. the anology is compairing two markets that
are quite different.

Amateur radio gear, is a "nitch market", the market is small.
Shoes are a comodity market. Every one needs them. It's a huge market and
it's a repeat market...How long do shoes last? Not long. How long do rigs
last? OK, excluding HTs, how long do rigs last? A long, long, time. They
have to keep adding features and making them better just to get a customer
to upgrade. How many major rigs does a ham purchase in his/her lifetime?
Notice though that the price on the big rigs is slowly coming down.

Amateur radio has to run on margin rather than quanity for a local store.
Shoes can run on quantity and a narrow margin. Hence we see them in the
chain stores and relatively few specialty shoe stores remain. Then the shoe
stores bought where they could get the best price so a very high percentage
of shoes are foreign made and relatively few are domestic. What kind of ham
gear do we see showing up in chain stores? Relatively small and inexpensive
rigs for the largest market segment is what shows up. Not the big, expensive
HF rigs.

The major difference is that although the local shoe store may close the
shoes will still be available through the chain stores, locally. Where as
the ham rigs will not. They will only be available from the larger stores,
or the smaller ones where their customers are willing to pay a bit more for
that personal service. There are a few left.

Being that local ham shops have serious competition to look out for, you'd expect excellent service. There are two ham stores in my area and both are run by very arrogant / rude people. If they want me to spring an extra 20 bucks in their store they better treat me with some respect and courtesy.

My 2 cents,

Rob

Well, I can probably get about as good a deal local, but it's the
sales tax that really makes the difference. At 8.25%, it can add up.
I'd prefer to buy local, but with high price items I'm not going to
pay sales tax to do it, if I can skip the tax by buying out of state.

From: log <accessviolation@bigpond.com>
Message-ID: <vKd%7.65713$HW3.58692@newsfeeds.bigpond.com>
Source record: 49158

Hi there.

I'm from Sydney, Australia and I have a questions about this whole amateur radio thing. I was hoping you could answer them.

I'm deeply interested in electronics, computers and mathematics. I was hoping I could use this technology to talk with my friend, living about 10 or so streets away.

I don't get the whole deal with how to set it up. To start off I was hoping me and my friend could buy kits from a local electronics store. Now, I've read about all this law stuff and I don't really get it. What can happen if say we set up Transmitter - Reciever stations in our houses? Can we get fined or go to jail or something like that? I'd love to communicate with other people on this too - but I'm confused by how to set up the frequencies as well. What can I do to start off?

Thanks in advance.

Cheers

I'm a newbie to radiocommunications and want to start a CB Station.

Is this all that I will need:
A CB Transiever
A License
An Antenna

Also, I have a question. With CB, there are a set number of frequencies right. You can't really have a conversation with two people by hogging a frequency all to yourselves right?

Thanks in advance.
Cheers

In the United States, the 'license' is not required nor possible.
Also, here we have 40 legal channels, and it's very common for a channel
to become 'home' for a certain group. While courtesy would dictate taking
a break and sharing the channel, courtesy has very little place on cb
nowadays.

In Australia it seems that CB users operate under a "Class licence"
which covers all CB users. In other words you don't have to apply for
your own licence or part with any money!

However, you *do* have to transmit in accordance with the Class
Licence, more info here:
http://www.aca.gov.au/publications/info/cbrcl.htm

(Now why can't the UK introduce "Class licencing"??

>Also, I have a question. With CB, there are a set number of frequencies
>right. You can't really have a conversation with two people by hogging a
>frequency all to yourselves right?

What you basically do is pick a vacant channel and start waffling!

Is that the service monitor ? If so it probably has a receiver
sensitivity like most other monitors, somewhere around 2 microvolts
instead of .2 like a receiver. That would be like installing a 20 db
(hope I got the number correct for voltage reduction) pad inline with a
good receiver.

I would much rather support the local guy. In my case, the local guy is 1 hr 15 minutes away. AES is les than 2 hrs away. I have been to both places. AES was awful..rude, ignored me, wouldn't answer my questions, and generally acted like the didn't want my business. My local guy cost little more, but he talked to me, and was willing to answer my questions. As a result, all my business now goes to the local guy.

I've never been to an AES store - never even talked with them on the phone in recent years. But I've ordered plenty from their web page and always received it on time and in good condition. On occasion I've sent them a question via e-mail and received a prompt and courteous answer.

A license is no longer required by the user to operate a CB radio.
You'll need the radio (and a means of powering it) an antenna and
antenna feeline.

Your second question, regarding the hogging of a frequency is not very
clear. There are a set number of CHANNELS - 40, each assigned to a
specific frequency. Two people engaged in a conversation on a
particular channel could very well "hog" the frequency, but with legal
equipment, this would only affect a very small geographic area (a few
city blocks at best) around each station, and only on one channel.

I just bought an FT1500 about 2 months ago. The difference between the local store and the Big Mail order house was 10 bucks, so I went to the local store. He didnt have any, but would get them in monday or tuesday. So I gave him my Email and Phone number and said let me know when they come in (live 30 miles north). Tuesday came and went then Wednesday and I wanted it for a trip coming up. He never contacted me so I called the big store in Oregon, got it with free shipping and it arrived 5 days later.

I tried the local store I drove the 60 miles on a friday, but he didnt even call me back.

It's been ages since I listened to CB, but it was always my observation that Channel 19 was where most of the activity was, and the other channels went largely unused. So if two people want to talk awhile, they can certainly go to an unused channel and not interfere with anyone.

465. IC-275 pll noise

Newsgroup: rec.radio.amateur.equipment
Date: 2002-01-10 14:27:08 UTC
From: Ross Hatfield <w8tz@qsl.net>
Message-ID: <0xh%7.7745$gO5.2872121@news1.news.adelphia.net>
Source record: 49169

Does anyone know of a fix for pll noise in the receive audio of a IC-275H two meter all mode. I was able to reduce the noise some by rearranging the wiring harness going to the dial encoder, but I can still hear the noise when the band is quiet...most of the time. The noise is a high pitched squeal that changes as the main vfo dial is rotated.

Thanks

Yu can build one yourself, using a coil and variable capacitor. It's called an L match. Partx can be obtained at any hamfest for around $10, sometimes less.

Look for a BC375 transmitter and/or its tuning units. Good assortment of parts plus a rotary variable inductor as well. I used the pieces from one to build an antenna tuner35 years ago. and I still use it today.

I am selling an IC 756 PRO that's less than a year old. It's in mint condition, purchased at Dayton last year and mailed to me in June 2001. I am moving and need the cash. My price is $1550. Call me at work at 757 867-7331 or at home in the evenings at 757 595-3545. While I would prefer a pick-up rather then mailing the unit (so you can try it out and see it), I will pay postage in CONUS.

When I bought my FT-847, I wanted to try and support the local guy. He didn't have one on display, didn't have any in stock, and I had already done all my research on the web and through QST reviews. So, I asked him if he would match the Texas Tower price. He did, but he really made a stink about it, both when I ordered the radio and went back to pick it up two weeks later. I figure I did him a favor - it cost me three hours (45 min drive each way) to try and keep him in business. Given the greater convience and lower cost of mail order, I now do that almost exclusively.

The economy changes. Business change. Not everyone likes the way things change.

I have a total of 5 units of these main frame sweepers
Kruse Systron Donner RF Sweeper Model 5000A. Working Unit. Features include: Adjustable Horizontal Sweep Speed 0.01 to 10 seconds; Horizontal output, Manual Trigger; Adjustable Start, Stop and three Marker Frequencies; Rear Panel connectors for external Sweep, external trigger, external AM modulation, sweep output, blanking output, marker output, 1KHz output; Selectable 115 or 220 VAC input. Designed to work with Model 5xxx RF Oscillator Plug-Ins. $125 each all 5 for $500 Plus shipping

Kruse Systron Donner RF Oscillator Model 5011. 1 - 2 GHz Working Unit. Features include: RF Attenuator Control; Selectable Internal or External Leveling; External Leveling Input BNC connector; 1KHz Square Wavewave Modulation On/Off; Retrace On/Off; Type 'N' Connector RF Output. Designed to work with Model 5000A Sweeper Mainframe $125 plus shipping

Kruse Systron Donner RF Oscillator Model 5014-9. 6 - 8 GHz Working Unit. Features include: RF Attenuator Control; Selectable Internal or External Leveling; External Leveling Input BNC connector; 1KHz Square Wavewave Modulation On/Off; Retrace On/Off; Type 'N' Connector RF Output. Designed to work with Model 5000A Sweeper Mainframe. $125 plus shipping

Kruse Systron Donner RF Oscillator Model 5015-2. 7 - 11 GHz Working Unit. Features include: RF Attenuator Control; Selectable Internal or External Leveling; External Leveling Input BNC connector; 1KHz Square Wavewave Modulation On/Off; Retrace On/Off; Type 'N' Connector RF Output. Designed to work with Model 5000A Sweeper Mainframe. $125 plus shipping

Total of 1 each of the plug-ins

A handheld transceiver is not grounded and works fine. So are radios
in cars and airplanes.

If you have a transceiver powered by a power supply connected to the
(imnproperly wired) AC power line you run the risk of damaging
yourself, if something goes wrong! You should at least have a
properly wired 3-prong AC outlet, with a 3 prong power cord on the
power supply. Radio shack used to sell a device for checking outlets.
I don't know if they still have them, but I have also seen them at
hardware stores. It has three neon lights that tell you if the socket
is wired properly.

It is still a good idea, for a permanent installation, to have a
seperate earth ground connected to a galvanized steel pipe (lasts
longer than a copper ground rod)stuck in the ground. A 'properly
grounded' radio can __decrease__ the __likelyhood__ of damage during a
thunderstorm by bleeding off the static buildup. That is why I prefer
antennas that are always at DC ground. The best way, of course, is to
disconnect everything when there is a storm nearby.

Go to the local electronics store and ask if they have any books on
amateur radio. In the USA, at least, there are radio services where
you do not need any license. You just buy a radio and start using it.
If you want to build your own then you will have to get an amateur
radio license. I beleive this is true for any country in the world
(except were the governments don't give a hoot).

I'm curious... What kind of antenna do you have on it? I assume you
have a good antenna, but sometimes using one that is for another band,
etc can cause this to show up more. I notice this on the 706 a bit.
I'm not sure what else would help. I'm not sure if adding extra
shielding/ ferrite beads, etc would help or not.

> Thanks
> w8tz@qsl.net

I used to talk to the original W8TZ. He used to be in Columbus, Ohio,
if I'm thinking of the right guy. I guess he passed on not too long
ago, being you now have his call. His name was Milt I'm pretty sure. I
worked him on 40 cw many times over the years. He was quite old even
then, and was a ham in like 1909 or something like that. Not sure the
date, but it was waaaaayyyy back there...He was one of the originals.
He was 8TZ at first. I think the last time I worked him was like 4-5
years ago or so, so it wasn't too awful long he passed on. Just
thought you might like a little history on your call...:) My present
call also a 2nd rounder vanity call. The original owner now has a 1
land 2x1. But my call is fairly new. It was born about 1981-82 or
somewhere around there. Yours is older than dirt..:/ BTW, I had the
chance to get W5MK recently, but I forgot about it until it was too
late after the 2 year wait, and blew it. It was snatched up by the
time I remembered to get it. :(MK

The original Analogy was not to "literally" suggest shoes would ever become mail order .
1) While mentioning a $400 difference on a $3500 rig might seem interesting, this is most likley extremely rare to most "local" guy shops, who, Most likley, are actually dealing with the morons daily that go look & feel his $129.00 2 Meter ht, or $169 2m mobile, & then go find it for $124.50 or $159.99 & don't give him the business, or the people that ask him to match some mail order price, & Don't ever factor in the shipping cost & time, which usually makes the local guy about near even with many of the 800#'s.
I live near a local shop, I'm in there frequently, Know the owner, & I honestly can't believe the "civil" attitude this particular owner usually has, given the endless parade of jerks walking in on a regular Daily basis, hassleing him over $10 or $15 on a $450 purchase. I witness regularly the people that spend 30 minutes picking his brain, taking free liturature ect... & then, after deciding with his help on which $225 Ht to purchase, walk out wispering that "XXX Supply" has them for $11.50 cheaper......
I actually saw a Ham (that pulled up in a new $40,000 SUV) argue with the shop owner over $1.70 worth of sales tax on a small item, mentioning "mail order places" out of state!!! He estimates that about 50% of his amateur customers are "these guys" & the other 50% are the "nice guys" , like some of the previous posters. I personally couldn't handle his job.....

Assuming, that this is legit and not just someone trolling ...

> What can happen if
> say we set up Transmitter - Reciever stations in our houses? Can we
get
> fined or go to jail or something like that?

Yes ... the Amateur Radio Service is a LICENSED service
and the rules are more strictly enforced than in "CB" ... you
must meet certain qualifications (which vary a bit from country
to country), take tests to prove that you meet those qualifications,
apply for and receive a license from your national radio regulatory
agency, etc. before you may transmit on amateur radio frequencies.
(You can listen all you want, but you can't transmit without the
proper
licenses.)

While penalties for non-compliance also vary from country to
country a bit, they are generally rather severe ... for example,
here in the US, you can be fined up to $10,000 and imprisoned
for a number of years for EACH violation ... I would NOT recommend
that anyone try to "get away with" operating without a license.
Most countries' regulatory agencies track down and vigorously
```

prosecute violators ... usually with the help of amateurs who
obviously have a vested interest in keeping the amateur bands
clean and free from interference from non-amateur sources.

> I'd love to communicate with
> other people on this too - but I'm confused by how to set up the
frequencies
> as well. What can I do to start off?

You say you're in Australia, check out your national society ...
the WIA ... their Victoria section has a website at:

http://www.wiavic.org.au/

> Thanks in advance.
>

483. Palm pilot pocketsat computations

Newsgroup: rec.radio.amateur.equipment
Date: 2002-01-10 23:29:07 UTC
From: sktullgren@aol.com
Message-ID: <20020110182907.26625.00000316@mb-fu.aol.com>
Source record: 49189

Hello all,

I recently received a palm pilot and loaded the trial version of pocketsat to my palm M105 to test if I wanted to invest in the registered version. I was comparing the calculations with J-pass software on the nasa website. There seems to be considerable margin of error regarding the pass predictions. Some by almost 1 hour. I checked the longitude and latitude, time zone(GMT-5), elevation (which is both set to 30 degrees) along with the criteria for visible, all passes, etc. etc.

I know that the palm pilot system was never designed for that software, so my question is: I assume the difference in calculations has to do with the devises internal method of computation vs that of nasa's computer? Is there a way to correct the software, i.e, has anyone tried the registered version and found any differences? Has anyone found a similar situation in using the trial version.
I have used the j-pass software before with no trouble and little error in predictions, so I question the pocketsat first and foremost.

sincerly,
kd5hlm

I have a 2m handie talkie with
Box
speaker mic
rechargable battery
AA battery pack
manual w/ schematics
AC walwart
works like new!I have used this for packet mostly.Also have older power supply that I could be dealt out of for an extra charge.I will trade for about anything.Looking for DC power strip, 2m mobile,6 meter stuff,mobile antennas, QTH antennas,you name it! I am a new ham and need alot of stuff still. Just ask, look to see what you got laying around!

reply here or to my email

Q:2.11. What is the IC-7400?
Q:2.12. What is the IC-746-PRO?
Q:2.13. Where can I find info on other Icom rigs?
Q:2.14. Where is info on the 706, 718, 756, 765, 735, ...
Q:2.15. What articles have been written about the IC-746?

S:3. Accessories

S:3.1. Power Supplies

Q:3.1.1 What power supply should I use with the IC-746?

S:3.2. Antennas

Q:3.2.1 What antenna should I use with the IC-746?
Q:3.2.2 What range can the automatic antenna tuning unit (ATU) handle?
Q:3.2.3 Will the internal ATU handle "random" wire antennas?
Q:3.2.4 Are there any "tips" to using the ATU?
Q:3.2.5 Can I use the internal ATU along with an external ATU?
Q:3.2.6 Does the internal ATU work on receive?
Q:3.2.7 How do I use a "beverage" antenna?
Q:3.2.8 How do I use different antennas for receive vs transmit?

S:3.3. Microphones

Q:3.3.1 What is the best microphone to use with the IC-746?
Q:3.3.2 Can I use a dynamic/studio microphone with the IC-746?
Q:3.3.3 Can I use a Heil microphone with the IC-746?
Q:3.3.4 How do I adjust the IC-746 for a Heil headset?
Q:3.3.5 Do I need a pre-amp to use a Heil microphone?
Q:3.3.6 What are the pin-outs on the microphone connector?

S:3.4. Keyers

Q:3.4.1 Can I hook up my straight key to the front "Elec Key" Jack?
Q:3.4.2 Can I connect my own Electronic Keyer to the IC-746?
Q:3.4.3 How do I wire up my paddles for use with the internal keyer?
Q:3.4.4 Can I use the internal and external keyers at the same time?

S:4. IF Filters

Q:4.1 How many optional IF filters can I install into the IC-746?
Q:4.2 What optional IF filters are available for the IC-746?
Q:4.3 Which optional IF filters should I buy?
Q:4.4 What is an IF filter's "bandwidth"?
Q:4.5 What is an IF filter's "shape factor"?
Q:4.6 Why do filter "bandwidth" or "shape factor" matter?

Q:4.7 What is considered to be a narrow filter?
Q:4.8 What are narrow IF filters used for?
Q:4.9 Can an IF filter be too narrow?
Q:4.10 What's the difference between IF filters from Inrad vs. Icom?
Q:4.11 Which IF should I put an optional filter into?
Q:4.12 What's different between IF filters for 9Mhz vs 455Khz?
Q:4.13 What are the 9Mhz IF filters best for?
Q:4.14 What are the 455Khz IF filters best for?
Q:4.15 How do I get the best results from TPBT?
Q:4.16 How do I configure the IC-746 to use an optional filter?
Q:4.17 How do I configure the IC-746 to use a non-Icom filter?
Q:4.18 How do I use a CW filter in SSB mode to receive PSK31?
Q:4.19 Why is there only one optional 455Khz IF filter slot?
Q:4.20 Where do I install a 2nd Inrad 9Mhz IF filter?

S:5. Computer Control

Q:5.1 How do I wire the IC-746 up for computer control?
Q:5.2 What cables do I need?
Q:5.3 What are CT-17, OPC-478, OPC-662 all about?
Q:5.4 What is the control protocol for the IC-746?
Q:5.5 What is CI-V?
Q:5.6 What is the CI-V address of the IC-746?
Q:5.7 What computer software is available?
Q:5.8 Where can I get computer software and upgrades?

S:6. Problems and Clarifications

Q:6.1 What's that funny rattling noise I hear when I first power on the rig?
Q:6.2 What's that "click" I hear as I tune across certain frequencies?
Q:6.3 Why doesn't the ALC meter work while adjusting the "mic gain"?
Q:6.4 Why can't I program any numbers into the memory names,
Q:6.5 Why isn't my output power up at 100 watts?
Q:6.6 The backlight in my LCD has stopped working. What's wrong?
Q:6.7 Is there some way to get the Icom-746 to generate DTMF tones?
Q:6.8 Why don't my "band edge beeps" match the US amateur bands?
Q:6.9 Can I transmit all the way out to the "band edge beeps"?
Q:6.10 Can I reprogram the "band edge beeps"?
Q:6.11 Do we know anything about the "band edge beeps"?
Q:6.12 How I reset back to factory default settings?
Q:6.13 What "birdies" does the IC-746 have?
Q:6.14 How do I adjust the LCD display?
Q:6.15 The Noise Blanker doesn't seem to do any good. What's wrong?
Q:6.16 How do I adjust or make the NB work better?

S:7. Misc...

Q:7.1 Are there different versions of the IC-746?
Q:7.2 What TX/RX "mods" are there for the IC-746?
Q:7.3 What other "mods" are there for the IC-746?
Q:7.4 I'm brave; what other "mods" are there?
Q:7.5 Can I operate 2m on reduced power?

Q:7.6 Where can I find plugs for the ACC connectors?
Q:7.7 What are the pin-outs on the ACC-1 connector?
Q:7.8 What are the pin-outs on the ACC-2 connector?
Q:7.9 Does audio to pin 4 of ACC-1 trigger the VOX?
Q:7.10 Where can I get replacement power connectors?
Q:7.11 Where can I get replacement microphone connectors?
Q:7.12 What is "Lo-Fi" SSB operation?
Q:7.13 What is "Hi-Fi" SSB operation?
Q:7.14 How does one improve the fidelity of a received signal?
Q:7.15 How does one improve transmission fidelity?
Q:7.16 Can the IC-746 transmit at less than 5 watts?
Q:7.17 How do I turn on both HF pre-amps at the same time?
Q:7.18 How do I adjust the 746 for best AM performance?

S:1. ADMINISTRIVIA

Q:1.1. What is an FAQ?
Q:1.2. Where can I get a copy?
Q:1.3. Where do I send feedback?

Welcome to the IC-746 FAQ.

Short Answer

FAQ stands for "Frequently Asked Questions". It tries
to cover common questions/problems/issues associated
with Icom's IC-746 HF/VHF amateur radio transceiver.

The master copy is kept at:

http://groups.yahoo.com/group/IC746/files/IC746-faq.txt

Mirrored copies (after a short delay) appear at:

http://www.qsl.net/kb9sss/IC746-faq.txt
http://206.230.2.41/IC746-faq.txt
(the 206 site is down for a system upgrade)

An older version (June 2001) is sitting at:

http://www.skysdaughter.com/icom746-faq

You do not need a Yahoo email account to access the
master copy, however, you will need a logon account.

Yes, that is a subtle but hopefully minor distinction.
Not everyone is willing to have a login account at Yahoo
(even if it is free), which is one of several reasons
for maintaining the mirror sites.

Also, we post the faq monthly to:

news:rec.radio.amateur.equipment

usually sometime between the 1st and the 10th.

You can post questions/comments about the FAQ to
the above newsgroup.

Long Answer

The format of this FAQ should become apparent right from
the start. Questions are grouped into related sections
and subsections, roughly in the form of an outline.
Questions start in column one with their composite
section number.

When possible/practical, there will be both a short
and long answer. The short answers will try to be
brief and to the point, typically about one paragraph.
While correct, quick, and immediate, it will often gloss
over subtleties and details. The long answers will cover
theory, alternatives, dissenting opinions, and other
supplemental material. We try not to unnecessarily
duplicate information between the answers (this one
is an example of that). Long answers may go on for
several pages.

The questions that are addressed here (as well as the
answers) come from several sources.

This FAQ was created by and is hosted by folks on a
Yahoo e-mail discussion group at:

http://groups.yahoo.com/group/IC746

www.qth.net hosts a more generalized Icom e-mail list
that covers all models, not just the IC-746. You can
lookup more information or subscribe to that list at:

http://www.qth.net/info/icom.info

Some of the info here originally appear upon a bbs
style on-line discussion group that used to be at:

http://vartel.com/icom746/icom746index.html
(site not responding Jan-2002)

There are also the following newsgroups:

news:rec.radio.amateur.equipment
news:rec.radio.swap

Specific comments or clarifications can be sent directly
to the FAQ coordinator. "Content submissions" would be
greatly appreciated. However, general discussion/debate
over the answers is best done in a more public forum,
like one of those mentioned above.

Q:1.4. What does this abbreviation or TLA mean?

Hams use a lot of abbreviations and TLAs (Three Letter
Acronyms), Toward the end of this document, is a small
glossary to some of the abbreviations we use in the FAQ.

==========

S:2. GENERAL INFO

Q:2.1. Should I buy an IC-746?
Q:2.2. What are the IC-746's features?
Q:2.3. How does the IC-746 stand up to the ______ ?

Short Answer

Yes. Try it, you'll like it.

Long Answer

This FAQ is maintained by happy, loyal, and devoted
IC-746 owners. What do you really think we're going
to say?

One thing nearly everyone (both loyalists and detractors)
agrees upon is that you should make every effort to
try out a rig before purchasing it.

For features, check out the IC-746 specifications
from brochures available at your local amateur radio
equipment store, on-line documents at various vendor
sites, or directly from Icom's WWW site at:

http://www.icomamerica.com/

Of particular interest might be the on-line copy of
the instruction manual.

Most of the 746's problems or faults show up either in
this FAQ (eventually) or in the archives at:

http://groups.yahoo.com/group/IC746

Probably the most objective, quantitative comparisons you
will find are the QST product reviews (freely available
to ARRL members):

http://www.arrl.org/members-only/prodrev/

Simpler, more limited, comparison charts are available
on the Amateur Electronic Supply WWW site at:

http://www.aesham.com/compare/comp_hf.html

User written reviews can be both more personal and
more detailed. They can also be more biased. You can
find plenty of them at:

http://www.eham.net/reviews

This topic has come up several times on Yahoo's IC746
discussion group. One of the more interesting threads
along these lines starts with message 1012 and ends
with message 1028. I'm told that message 1023 is
particularly good. Another good thread starts with 1049
and ends with 1077.

http://groups.yahoo.com/group/IC746/message/1012
http://groups.yahoo.com/group/IC746/message/1023

Q:2.4. Where can I buy/sell a used IC-746?

Usually when someone asks this on the internet, they are
looking for an on-line swap page. There are, of course,
plenty of other options. Most dealers have used/demo
equipment. Hamfests are a traditional favorite, as are
"swap nets" on HF.

That said; the two largest forums on the internet for
amateur radio gear are the USENET newsgroup

news:rec.radio.swap

and the infamous eBay auction site.

http://www.ebay.com

"Amateur Radio Trader" is both a magazine and a WWW
site devoted to amateur radio classifieds:

http://www.amradiotrader.com
(site not responding Jan-2002)

After those, you have your choice of dozens of
dedicated swap sites on the net. A few of them are:

http://www.arrl.org/RadiosOnline/
http://www.qrz.com/forum/

http://www.eham.net/classifieds/
http://www.k1dwu.net/hamtrader/

AC6V maintains an entire list of swap pages as part
of his excellent ham links/resource site.

http://www.ac6v.com/swap.htm

Q:2.5. How much is a used IC-746 worth?

Unlike used cars, there is no official "blue book"
for ham equipment. Only YOU can decide this.

Your best bet is to peruse the archives for

news:rec.radio.swap

over the past 6 months or so.

You might also check out one of the following sites

Electronic Boneyard Prices:

http://www.geocities.com/CapeCanaveral/Hall/8701/ham/boneyard.htm

E-Bay prices:

http://aade.com/hampedia/prices.htm

Virtual Hamfest - Recent Prices:

http://www.vhamfest.com/prices.html
(site not responding Jan-2002)

Good luck.

Q:2.6. Is there a dedicated HF net for the IC-746?

Yes, one was started in October, 2001.

It convenes near 14.297 Mhz SSb (20m) on Sunday evenings
at 9:00pm Eastern time (6:00pm Pacific).

The folks that run the net shift it along with Daylight
Savings Time in the U.S.A. Therefore, during "standard"
time (last Sunday in October to the first Sunday in
April) the net starts at 0200 UTC Monday. During
"savings" time (first Sunday of April through last
Sunday of October) the net starts at 0100 UTC Monday.

For the curious, not all of the U.S.A. participates in
"daylight savings time". Likewise, portions of Europe
participate, but on a different timetable. A wealth

of information on DST can be found via Yahoo at:

http://dir.yahoo.com/Science/Measurements_and_Units/Time/Daylight_Saving_Tim
e

http://dir.yahoo.com/Science/Measurements_and_Units/Time/Daylight_Saving_Tim
e

or within the AC6V link indices at:

http://www.ac6v.com/opaids.htm#CLOCKTIME

or directly from NIST (the National Institute of
Standards and Technology) at:

http://www.time.gov

The folks in the Yahoo IC746 e-mail group try to maintain
a net calendar at:

http://groups.yahoo.com/group/IC746/calendar

Yes, you have to be a member of the e-mail group to
access their pages, but as a fringe benefit, you'll even
get an automatic e-mail reminder on the day of the event.

We've heard of a few other HF nets devoted to Icom
equipment in general. They meet at:

Sunday, 1700 UTC, 14.317 Mhz ssb
Sunday, 2100 UTC, 14.317 Mhz ssb

Q:2.7. Are there electronic copies of 746 instruction manuals?

YES! During the first week of November, 2001, Icom
made an electronic copy of the IC-746 Instruction Manual
(along with many others) available on their WWW site at:

http://icomamerica.com/support/documents/index.html

A backup copy of the manual is stored in the IC746
Yahoo group's "Files" area at:

http://groups.yahoo.com/group/IC746/files/IC-746-Instruction-Manual.pdf

Additionally, the FCC posted the IC-746pro instruction
manual (and various other documents) at:

http://gullfoss2.fcc.gov/cgi-bin/ws.exe/prod/oet/forms/reports/Search_Form.h
ts?mode=Edit&form=Exhibits&application_id=740578&fcc_id=AFJIC-746PRO

A backup copy of both parts of this manual is stored
in the IC746 Yahoo group's "Files" area at:

http://groups.yahoo.com/group/IC746/files/IC-746pro-Instruction-Manual-1.pdf

http://groups.yahoo.com/group/IC746/files/IC-746pro-Instruction-Manual-2.pdf

While Icom has relaxed a little in providing these documents, they are still protected by copyright. Please, treat them accordingly. Remember, Icom is doing us a favor.

Q:2.8. Are there electronic copies of 746 service manuals?

No such copies currently exist, although they would quickly become popular if they did. As of May 2001, Icom had no plans for creating one. Additionally, Icom considers any such external productions to be a violation of their copyright. Ray (the product manager at the 2001 Hamvention) was very firm on this.

Hard copies are available through any Icom retailer as well as through the W7FG Vintage Manual WWW site at:

http://www.w7fg.com/

Q:2.9. How do I fix the font substitution error in the PDF manual?

When trying to read the PDF version of a 746 Instruction Manual with the Adobe Acrobat Reader, some people encounter the following three dialogs on page 10 of the document (PDF page 12).

A font required for font substitution is missing.

An error has occurred that may be fixed by installing the latest version of the Japanese Language Support package.

Unable to find or create font "Ryumin-Light-Identity-H". Some characters may not display or print correctly.

The error is not fatal. There are a few dozen places in the manual where text in diagrams will show up as a series of dots.

You can get rid of the error by downloading the appropriate asian font package directly from Adobe's support pages. As of November, 2001, the appropriate link was:

http://www.adobe.com/support/techdocs/2a156.htm

Q:2.10. How does an IC-746s differ from an IC-746?

Japan has a 3rd Class license that is power limited
(sort of like the defunct US Novice class). The IC-746s
is identical to the IC-746, except that it caters to
this limited operating class. It's output power is
limited to 10w on HF and 20w on VHF.

Nobody has yet reported a "mod" for this rig to bring
its power up.

Q:2.11. What is the IC-7400?
Q:2.12. What is the IC-746-PRO?

These are both successors to the IC-746. The IC-7400
is the Japanese version while the IC-746-PRO is the
English version. We don't know yet what else (if
anything) differentiates them.

There are two ways to look at the IC-746-PRO. Some
view it as a beefed up IC-746 while others view it as
a watered down IC-756-PRO. On the outside, it looks
and operates very much like the IC-746. The controls
are similar enough that you confuse the two. However,
the inside (RF chain and DSP) is more like the IC-756-PRO
than anything else.

Here are some features that the IC-746-PRO has over
the IC-746:

+ 32bit DSP with 24bit ADC
+ Selectable digital filters (50+)
+ Sharp or Soft filtering (via DSP)
+ Digital TPBT
+ Manual digital notch filter (in addition to ANF)
+ Twinned Digital APF (great for RTTY?)
+ DSP based RTTY decoder
+ Adjustable digital noise blanker
+ Digital TX/RX equalization (instead of analog)
+ Digital speech compressor (instead of analog)
+ Digital voice recorder

You'll notice how prominently the DSP plays in this rig.

One thing the original 746 has over the 746-PRO is an
additional IF stage, thus its TPBT is actually going
through two offset IF filters. The 746-PRO achieves its
TPBT via the DSP. Its argued that the DSP filtering more
than makes up for the lack of the extra filter and is
more programmable/flexible. It's counter argued that DSP
filtering is not as effective as traditional IF filtering
(the 746-PRO instruction manual even eludes to this) and
that insufficient filtering early on overtaxes the DSP.

Both are excellent rigs and only time will tell just
how effective DSP really is. Perhaps someday Icom will
make a rig with both.

Here are some of the features the IC-756-PRO has
that the IC-746 does not.

- Dual watch receiver design
- Real-time spectrum scope

Additionally, the IC-746-PRO retains the basic form
factor, LCD, control layout, and bonus 2m capabilities
of the IC-746.

Plenty of sales and technical information is available
(including downloadable pictures and brochures) from
Icom's WWW site at:

http://www.icomamerica.com/

There is a Yahoo discussion group devoted to the IC-7400,
as well as a group devoted to the 746 series in general.

http://groups.yahoo.com/group/IC7400
http://groups.yahoo.com/group/IC746

Icom has not yet made a copy of the IC-746-PRO available
in electronic form, however, the FCC has. You can access
it and other information at:

http://gullfoss2.fcc.gov/cgi-bin/ws.exe/prod/oet/forms/reports/Search_Form.h
ts?mode=Edit&form=Exhibits&application_id=740578&fcc_id=AFJIC-746PRO

And a nice ham-written synopsis appears at:

http://www.qsl.net/ab4oj/ja7ude/ic7400.html

Q:2.13. Where can I find info on other Icom rigs?
Q:2.14. Where is info on the 706, 718, 756, 765, 735, ...

This FAQ is devoted to the IC-746. As of November, 2001,
we do not know of any FAQ's devoted to other Icom models.
However, as of Jan-2002, a project was underway to start
accumulating and centralizing Icom information at:

http://www.qsl.net/icom/

While the coordinator of this list already has their
hands full, they would be glad to advise, help, and
collaborate with people interested in maintaining
other FAQs.

Much of the generic information in this FAQ is applicable
to other Icom rigs, but please, use common sense when
trying to apply it.

For general information on other Icom rigs try:

Icom's WWW site at:

http://www.icomamerica.com/

Icom e-mail discussion group at:

http://www.qth.net

Usenet newsgroup:

news:rec.radio.amateur.equipment

The definitive collection of "mods" for all makes and
models of amateur radio equipment is at:

http://www.mods.dk/

Yahoo Groups hosts more than 40 e-mail/WWW discussion
groups related or devoted to Icom equipment. Here are
some of them.

http://groups.yahoo.com/group/icomr2
http://groups.yahoo.com/group/ICOMR3
http://groups.yahoo.com/group/ic706

S:3. Accessories

S:3.1. Power Supplies

Q:3.1.1 What power supply should I use with the IC-746?

Short Answer

Any good quality, communications grade, power supply
rated at least 20 amps or more (continuous duty) should
do just fine. However, most of us use larger supplies
(for a variety of reasons).

Popular supplies that are known to work (via testimonial):

Alinco DM-330MVT 30/32A switching
Astron RS-35M 25/35A linear
Astron SS-30 25/30A switching
Astron SS-25 20/25A switching
MFJ 4125 22/25A switching (MightyLite)
MFJ 4225 22/25A switching
MFJ 4035-MV 30/35A linear
Samlex SEC-1223 23/25A switching
Kenwood PS-52 20/22A linear

Popular supplies to avoid (via testimonial):

Astron RS-20 - overloads too easily
Kenwood PS-30 - overloads too easily
Diamnond GZV-4000 - RF hash on 40/20m

Long Answer

This question typically arises for one of two reasons.
Either someone wants to buy a new power supply, or they
have an existing power supply that they want to use.

In both cases, the issues are: load capacity, size, weight, electrical noise, mechanical noise, cost, features, and appearance. Buying a new supply gives you a lot of options; there are plenty of great supplies out there. With an existing supply, you have no control over these factors; you're simply looking for a "fit".

You'll want to consider the following factors.

Reviews

QST tested and reviewed many supplies in January and September, 2000. You'll find the results informative. ARRL members can access those and other reviews on-line at:

http://www.arrl.org/members-only/prodrev/pdf/pr0001.pdf

http://www.arrl.org/members-only/prodrev/pdf/pr0009.pdf

Transportability

The larger the capacity, the larger and heavier the supply. If size and weight are critical for you, consider a "switching" supply as they are usually less than half the size of a "linear" supply.

Electrical Noise

All supplies generate some electrical noise. Typically the noise from linear supplies will be in the form of AC hum while from switching supplies the noise will be RF hash. Communications grade power supplies of either type are designed to minimize the noise, and generally cause no problem. (i.e. this is not a good place to cut corners)

"Computer" power supplies that are pressed into radio service are particularly bad when it comes to electrical noise.

Usually, the harder you push a supply (the heavier the load), the worse the noise will become.

Mechanical Noise

Many supplies have cooling fans. Sometimes, the fans are loud enough to be a noise problem themselves. Fan noise is variable from supply to supply (even within the same manufacturer and model). Likewise, hearing tolerance varies from operator to operator. Thus, it's hard to tell in advance if a specific supply will have a problem. Time may yet tell.

We do know that fans are driven by load. The closer you operate to a supply's capacity, the more the fan runs.

Also, some of the transformers used in linear supplies will generate an audible hum. The transformer itself vibrates with the AC supply. Mass seems to help here. Usually (not always) the heavier the transformer, the less the hum.

Its pretty easy to put a noisy power supply under a table, behind a cabinet, or elsewhere to cut down on the noise level. Just be careful to allow proper air flow for cooling.

Features

Most of us consider current limiting, over voltage protection, and high temperature shutdown to be mandatory in a new supply.

Fuses or breakers are required for UL certification. Buy spare fuses right away; they never blow at a convenient time.

Meters are non-essential, they are luxury items. They make the supply bigger and more expensive. However, they can be very handy and even fun. Lets face it, most hams enjoy gadgets.

Adjustable output voltage is a useful feature, more useful than you might realize. Most new supplies have it (usually internally).

Load Capacity

The size, weight, and cost of a power supply all tend to increase with its load capacity. Those factors encourage us to get the smallest supply we can. There are also factors that encourage larger supplies; such as noise, heat, accessories, etc...

The IC-746 specifications list a current drain at maximum transmit power of 20A at 13.8Vdc. Thus, the recommendation that your supply should handle 20 amps (or more) continuously.

It is possible to run the IC-746 with a smaller supply, but extreme caution and discipline are required. Very few, if any, of us recommend it for normal operation.

For example, the 20 amp maximum in the IC-746 specifications is full key-down at full power. You could just lower your RF power to help match your load to the supply. You could even run the IC-746 QRP, drawing as little as 3-4 amps on transmit.

Another factor is operating mode. Some of us have
measured full-key loads as high as 21-22 amps.
Normal SSB transmit at full power draws 6-15 amps.
But FM, digital, and CW will generally pull 18-20 amps
at full power.

Continuous vs. Intermittent Load

There are issues concerning a supply's "intermittent",
"peak", or "surge" capacity. A supply might be rated
for 16 amps continuous and 20 amps peak. Normally, the
IC-746 runs at about 2-3 amps for receive and only hits
the 20 amp maximum during transmission. Thinking of
transmitting as "peak" or "intermittent" activity can
lead one to think that such a supply is acceptable.
It might even be. However, a problem develops when we
try to define what peak or intermittent activity is.

Everyone would agree that transmitting for 3 minutes
at 20 amps till the repeater time-out cuts you off is
not a peak. How short a time constitutes a peak and
at what duty cycle? Without some sort of specification
or standard, "peak" and "intermittent" could mean just
about anything. Most of us feel more comfortable with a
"better safe than sorry" approach.

This dual rating system for power supplies is a great
source of confusion. Specifically, you could buy a power
supply rated for 20A and have it fail under full load.
The Astron RS-20 and Pyramid PS-21 are examples of
such supplies. While both are excellent supplies,
they just can't keep up with an IC-746 under full power.

The exact definition of intermittent, peak, or surge
as used by the power supply manufacturers has not
been established.

(Some of us are going to try to talk to the
supply manufacturers about this to get more
details)

To quote a tech from Samlex:

Maximum rating is surge current requirement for
starting reactive loads or short term dynamic
loading and is limited to a few seconds.

This supply is not designed for pulsing loads.

Currents beyond the maximum rating will force the
unit into current limit and the output voltage
will drop and it will no longer be regulated.

Meanwhile, MFJ said (of the MFJ-4322):

Our units will shut down at surge. At 25 amps
surge, the power supply will shut down at about
ten seconds.

So while it is theoretically possible, most people do
not use supplies rated less than 20 amps continuous.
In fact, most use substantially bigger supplies.

Bigger Supplies

Why use a bigger supply? There are several reasons.

As noted earlier, the closer you operate a supply to
its rated capacity, the greater the electrical noise,
mechanical noise, heat, etc...

Strain leads to wear-and-tear. So it can be argued
that a bigger supply should last longer.

The IC-746 is rated at 20 amps max, but loads as high as
21-22 amps have been measured. "Your mileage may vary"
definitely applies.

The continuous rating is generally based upon an
ambient air temperature of 20 C. The rating degrades
as the temperature rises, by how much, we're not sure.
Filed Day conditions will be stressful to your supply.

13.8 V times 20 A yields 276 watts. There's a tendency
for some supplies to drop voltage a little when they
get hot or overloaded. There's also a tendency for
some radios to increase their current pull when the
voltage drops. At 12 Vdc, that same 276 watts would
imply 23 amps. You push the supply capacity, which
drops voltage a little, which drives the rig current
up, which pushes the supply further ... then BANG.
You blow a fuse. (AK6R has actually seen this effect
with his 756pro)

There are plenty of other devices that need DC power.
You need to account for them as well.

Other and future rigs may have greater power demands
(like the 756pro). Extra capacity now may avoid the
need to upgrade your supply in the future.

You might well spend most of your time in a low power
situation (SSB QRP) and get by with less than 5A.
But, in an emergency, you and your gear may be called
upon to operate in different modes, at higher power,
and with heavier duty cycles. Planning ahead for the
worst case usage helps prevent an untimely failure at
just the wrong time.

Conclusion

So, you'll find most of us with power supplies ranging
from 20 to 30 amps continuous; and some with even
bigger supplies.

S:3.2. Antennas

Q:3.2.1 What antenna should I use with the IC-746?

Short Answer

Any antenna you want.

Long Answer

Seriously. ANY antenna will work with the IC-746,
with the proper interfacing. People have even made
contacts using dummy loads.

Antennas are probably the most uniquely individualistic
aspect of any ham station. Antenna selection is a BIG
topic; much too big to deal with in an FAQ (at least
for this one).

The IC-746 has 50 ohm, unbalanced, coaxial RF outputs.
With the automatic ATU capable of handling SWR mismatches
of up to 3:1 on HF (and 2.5:1 on 6 meters), you have
a wide variety of choices available to you.

There are many excellent books on the topic; the ARRL
has a couple dozen of them. A good one to start with is:

The ARRL Antenna Book

At over 800 pages (and over 1,000 antennas), you're
sure to find SOMETHING that fits your style and budget.

For more information, try hanging out on one of over
50 e-mail groups on the topic at

http://groups.yahoo.com

or visit one of the hundreds of antenna oriented WWW
sites indexed by AC6V:

http://www.ac6v.com/
http://www.ac6v.com/antprojects.htm

or follow along with the discussions on the newsgroup:

news:rec.radio.amateur.antenna

or visit the on-line antenna magazine:

http://www.antennex.com/

or, you could just put up a trusty old dipole.

Just be sure you do use an antenna. The IC-746 does not
like to transmit into an open load (no connected antenna).
It will put an undue (and possibly fatal) strain on your
output transistors.

Q:3.2.2 What range can the automatic antenna tuning unit (ATU) handle?

Officially, the automatic ATU in the IC-746 can handle SWR
mismatches of up to 3:1 oh HF and up to 2.5:1 on 6 meters.
In practice, many people get even wider ranges.

The ATU does not function on 2 meters.

Some have pointed out that, even though the internal tuner
may tune a particular antenna configuration, if there
is a high SWR, you could end up burning out the tuner.

We have at least one case (reported by KG6GLN) where the
detector diodes in an IC-746 were fried. According to
the ICOM tech, "... it could happen if you tried to
use an external antenna tuner in conjunction with the
internal tuner. "

Q:3.2.3 Will the internal ATU handle "random" wire antennas?

No.

The internal ATU can only handle an SWR mismatch of
about 3:1 on HF and 2.5:1 on 6 meters. You'll need
an external ATU.

Q:3.2.4 Are there any "tips" to using the ATU?

You mean, besides the tips already provided on page 58
of the Instruction Manual? Yes.

The ATU appears to pay attention to the reflected
power, not the SWR. [Note: we'd love someone to
analyze the schematics to confirm or deny this.]
This is evidenced by two effects.

When starting from a close match at QRP power levels,
the auto ATU doesn't always home in on the best match.
Increasing the power level and tuning again often
improves the match, which the ATU then retains when
returning to QRP power.

The converse situation can also cause trouble.
When starting from a poor match at full power, the auto

ATU sometimes can't find a match at all. In this case,
tuning at lower power allows the ATU to get a match,
which the ATU then retains when returning to high power.

If one end of a band consistently gives you trouble
while the other end tunes easily, then you may still
be able to coax the ATU into matching the antenna.
Start in the portion of the band where the ATU works
and tune there. Then, move your way across the band
in increments (maybe 25Khz at a time), tuning as you
go until you reach the desired portion.

Q:3.2.5 Can I use the internal ATU along with an external ATU?

Maybe. Theory says yes, but Icom says no. The results
are mixed. Use at your own risk.

Many people use an external ATU along with their IC-746.
Usually, they leave the external ATU switched to "bypass"
and let the internal ATU do its thing. For troublesome
bands/antennas, they turn off the internal ATU and
engage the external one.

Others use an external ATU to match their antenna to
the middle of the desired band and let the internal ATU
handle the rest. In theory, the ATU doesn't know or
care what's hooked up to it; it simply tries to match
up to the impedance it sees.

In most cases, either of the above approaches work fine.
Many hams have been applying both for years with no
problems.

However, some IC-746's have had their ATUs go out from
fried detector diodes and driver transistors. On many
repairs, Icom has blamed the failure upon external
tuners. One ham was told that external tuners can
cause problems even when they are switched to "bypass".

Nobody has been able to adequately explain why an
external tuner would cause such damage, particularly
when bypassed. Some speculate that tuning with low
power is safer than tuning with high power (if nothing
else, its at least more polite).

We need more information on this, but at least you've
been warned.

Q:3.2.6 Does the internal ATU work on receive?

Yes. The internal ATU is enabled while receiving.
Of course, it can only "match" while transmitting.

It's unclear if the internal ATU acts as an additional
preselector when enabled.

Q:3.2.7 How do I use a "beverage" antenna?
Q:3.2.8 How do I use different antennas for receive vs transmit?

As previously stated, nearly ANY antenna can be used
with the IC-746, provided it can be matched to the
746's 50 ohm, unbalanced antenna terminals. However,
there is more to using a "beverage" antenna than just
impedance matching.

Beverage antennas tend to sacrifice gain in order to
improve their signal to noise ratio. So, while they
are good for receiving, they are poor for transmitting.
Therefore, you would typically use a separate antenna
for transmitting.

While not convenient, the IC-746 can be configured to
use one of its antenna ports for transmitting and the
other for receiving. Run the rig in split mode with
both VFOs on the same frequency, but have VFO A use
antenna 1 and VFO B use antenna 2.

A more traditional approach (albeit, more work) is to
take the HF transmit signal from one of the accessory
ports activate a coaxial relay (via a driver transistor)
to switch between antennas. This is the same basic setup
you would use to control an external amplifier.

S:3.3. Microphones

Q:3.3.1 What is the best microphone to use with the IC-746?

In theory, your favorite microphone is the best choice,
provided you hook it up and adjust it properly.
Its basically just a matter of personal preference.

The confusion lies in the definition of "best".
Most users generally agree that the stock hand mic is
generally adequate for general use, but is not "best"
or "optimal" for any specific use. You know the tale;
jack of all trades, master of none.

If you want better transmit fidelity (or even broadcast
quality sound), then you'll want a full range microphone,
possibly with a dynamic element. Icom's own SM-20

gets good reviews for this application, as does Heil Goldline microphones. Other microphones will also work; these just happen to be the most popular.

Many operators have found that the inexpensive studio microphones from Radio Shack work astonishingly well. Yielding 90% of the performance at 10% of the price makes this a viable, budget conscious, choice. It also shows just how poor the stock mic is.

If you're after more "punch" for DXing or contesting, then you'll want to look into one of the Heil DX style microphones. They're frequency responses have been tailored to accentuate the portions of the voice spectrum that most contribute to understandability. Their great performance have made them very popular.

For those of you who "want it all", Heil even makes a microphone that switches both ways, literally. It has two pick-up elements in the same mic, so you can change between ragchewing and DXing punch at the flick of a switch.

Who says you can't have your cake and eat it too?

Q:3.3.2 Can I use a dynamic/studio microphone with the IC-746?

Yes, but only if properly wired.

Icom uses electret elements and incorporate preamps right into their hand mics. The DC power is fed directly from the rig through the mic cable. When using a dynamic microphone, be sure you have a capacitor (value not critical - maybe 1.0uf to 4.7uf) in the circuit to block the DC supply voltage

While you're at it, when you wire up your mic cable, you might want to short pins 6 and 7 with the chassis ground to assure that they are at the same ground potential. This supposedly helps reduce RFI from coming in through the mic cable.

Depending upon the microphone, you may have to use a hefty amount of mic gain (and possibly compression as well) to make up for the lack of the handset pre-amp.

Q:3.3.3 Can I use a Heil microphone with the IC-746?

Yes, most Heil microphones work well with the IC-746. Bob does this himself.

As with any dynamic microphone, be sure you have a DC blocking capacitor in the circuit to isolate the mic element from the DC supply voltage Heil's pre-wired mic harnesses are perfect for this.

A notable exception is the HS-706 which (as the sales literature clearly states) ONLY works on the IC-706 series.

Q:3.3.4 How do I adjust the IC-746 for a Heil headset?

In theory, the IC-746 has enough microphone gain to use an unaided Heil microphone. Heil's May, 2000, newsletter discusses this topic, see:

http://www.heilsound.com/newslettermay00.htm

In short, you use moderate mic gain (50-75%, 12-3 o'clock position) along with moderate compression (8-10db, 12-1 o'clock position) for the best results.

Q:3.3.5 Do I need a pre-amp to use a Heil microphone?

While the above procedure works for most rigs, it does not seem to work for everyone. For the few that still have gain problems, adding the Heil HMP microphone pre-amp should work.

Some speculate that the differing mic gain requirements are due to different versions of the IC-746, or simply due to widely varying component tolerances. Nobody has collected enough information yet to nail this issue down.

DO NOT use the HMP pre-amp unless you're sure you need it. Too much gain will distort your transmitted audio; with all the usual detriments (hard to copy, splatter, etc...)

If you decide you need a pre-amp but want to build it instead of buying it, then check out:

"Build a low cost Boost Microphone"
QST, Aug, 1989

along with the Icom specific mods available (DC blocking capacitor, etc...) from KK5DR (Matt Erickson) at:

mailto:kk5dr@ev1.net

Q:3.3.6 What are the pin-outs on the microphone connector?

As listed on page 67 of the Instruction Manual:

1 - mic input
2 - +8V DC Output
3 - freq up/down
4 - Main readout squelch switch
5 - PTT
6 - GND (PTT)
7 - GND (MIC)
8 - AF Out (varies with [AF]) (center pin)

S:3.4. Keyers

Q:3.4.1 Can I hook up my straight key to the front "Elec Key" Jack?
Q:3.4.2 Can I connect my own Electronic Keyer to the IC-746?
Q:3.4.3 How do I wire up my paddles for use with the internal keyer?

Short Answer

Yes, virtually any type of key/keyer can be connected
to the IC-746 via either the front "Elec Key" jack
or the back key jack. However, the two jacks require
different wiring, and only the front jack will give
access to the internal electronic keyer.

The front "Elec Key" jack on the radio accepts a
3-conductor 1/4 inch stereo phone plug and can be wired
for use with anything. The back "key" jack accepts a
2-conductor 1/4 inch mono phone plug and can be wired
for use with either a straight key or an external keyer,
but not for the internal keyer.

See page 68 in the operator's manual for wiring details
and pages 23 and 27 for the programming details.

Long Answer

FOR A STAIGHT KEY OR EXTERNAL KEYER:

For a diagram on how to wire the stereo plug see page 68
of the Instruction Manual. For a straight Key or keyer,
wire only the tip and the Sleeve, and leave the ring
as No-Connect.

tip ring sleeve
oooo ====]]]]]]} ---------> 2 cond wire to key/keyer
(+) (nc) (-)

The back "key" jack is a mono 1/4 inch phone plug and
is easy to wire.

When using the front Jack, You also have to set the
radio to recognize that the ring is not used. To set
the radio, You do have to go to the "key", "set"
menu and tell it you will be using a straight key.
See Page 23 and page 27 in the operation manual.
While in CW mode press KEY(F4), then press SET(F5),
Press the down arrow(F2) until you reach the sixth menu
(KEYER TYPE), Use the Main tuning knob to set the type
of keyer to "Straight Key".

TO USE THE BUILT IN ELECTRONIC KEYER WITH PADDLES:

Wire the 3cond Stereo plug (use the front jack) so
that the "Dit" is the tip, the "Dash" is the ring and
the sleeve is common(-). (You can also wire up a "bug"
this way (without electronic keyer))

oooo ====]]]]]]} ---------> 3 cond wire to paddles
(dit) (dash) (-)

To set the radio to use the internal electronic keyer,
You do have to go to the "key", "set" menu and tell
it you will be using paddles. See Page 23 and page
27 in the operation manual. While in CW mode press
KEY(F4), then press SET(F5), Press the down arrow(F2)
until you reach the sixth menu (KEYER TYPE), Use the
Main tuning knob to set the type of keyer to "Elec Key".
(or "bug Key" to use the bug without electronic keyer)

Q:3.4.4 Can I use the internal and external keyers at the same time?

Sure ... you can have an iambic keyer plugged into
the front, and a straight or external electronic
keyer plugged into the back. You can then use either
interchangeably.

We don't yet know of anyone brave enough (let alone
capable) to actually use both keys SIMULTANEOUSLY.
Would such an person be a "two fisted" operator? 8)

==============================

S:4. IF Filters

Q:4.1 How many optional IF filters can I install into the IC-746?

There are two (2) slots for optional filters in the 9Mhz IF,
and one (1) slot for an optional filter in the 455Khz IF.

Q:4.2 What optional IF filters are available for the IC-746?

Available filters for the 9Mhz IF include:

Icom FL-101 250 hz (CW narrow)
Icom FL-232 350 hz (RTTY, CW narrow)
Icom FL-100 500 hz (CW/RTTY narrow)
Icom FL-223 1.900 Khz (SSB narrow)
Icom FL-103 2.800 Khz (SSB wide)
Inrad 121 250 hz (CW)
Inrad 111 400 hz (CW)
Inrad 320 1.800 Khz (SSB)
Inrad 110 2.100 Khz (SSB)
Inrad 123 2.800 Khz (SSB wide)

Available filters for the 455Khz IF include:

Icom FL-53A 250 hz (CW narrow)
Icom FL-52A 500 hz (CW/RTTY narrow)
Icom FL-222 1.800 Khz (SSB narrow)
Icom FL-96 2.800 Khz (SSB wide)
Icom FL-257 3.300 Khz (SSB wide)
Inrad 306 125 hz (CW) (might not fit)
Inrad 122 250 hz (CW)
Inrad 116 400 hz (CW)
Inrad 322 1.800 Khz (SSB)
Inrad 314 2.100 Khz (SSB)
Inrad 109 2.400 Khz (SSB)
Inrad 124 2.800 Khz (SSB wide)

(The Inrad 306 is listed on their WWW site,
and is electrically compatible, but might
not fit in the available socket.)

While not an optional filter, W2ENY has a kit to modify
the IC-746 by replacing either the stock 9Khz or 15Khz
wide internal filters with a 6Khz wide filter. See the
"mod" question of the FAQ for more details.

Q:4.3 Which optional IF filters should I buy?

Better to ask, "Why would I even need filters?".

Quite possibly, you'll won't need any optional
filters. Use the Twin PassBand Tuning (TPBT) to
dynamically adjust your IF bandwidth first. Properly
used, TPBT can give you nearly any bandwidth you want.
You may decide that you don't need any anything else.

There are over a thousand (1,429) possible combinations
of optional filters. Most of them will make sense
(i.e. be useful) to someone, somewhere. As it is a
matter of style and situation, ultimately, the choice
will be up to you.

We've broken up this issue into several questions, each targeting a more specific issue or problem. Short of writing a book, it is the only hope of providing any useful answers.

Q:4.4 What is an IF filter's "bandwidth"?
Q:4.5 What is an IF filter's "shape factor"?

Also called "passband", a filter's bandwidth is a measure of how wide a signal will pass thru the filter. For IF filters, this is typically measured as the span between the filter's -6db points. (Some folks measure bandwidth at the -3db points. Pay careful attention to the specifications when comparing filters)

"Shape factor" tries to represent steepness of the filter's attenuation curve. Typically defined as the ratio of the -60db passband to the -6db passband (bandwidth). The perfect shape factor of 1.0 is unobtainable. Shape factors of 2.0 or less are considered excellent.

This is one of those situations where a picture is worth a thousand words. A good look at the spectral response curve of a typical filter will make these terms clearer.

Inrad publishes basic performance curves of most of their filters on-line. An example of a typical curve is:

http://www.qth.com/INRAD/graphs/116.gif

Several companies have good on-line treatments describing basic filter characteristics, complete with diagrams.

Corning Frequency Control has a very concise page styled in a glossary format at:

http://www.ofc.com/filters/definitions.html
(site not responding Jan-2002)

Vectron International also has a nice on-line treatment of filter characteristics at:

http://www.vectron.com/products/xtal/filter.htm#definition

The folks at Piezo Technology Inc. describe filter characteristics with attenuation curves.

http://www.piezotech.com/Technical_Information/techindex.htm

Q:4.6 Why do filter "bandwidth" or "shape factor" matter?

Narrower bandwidths reject more noise and improve sensitivity. Wider bandwidths provide better fidelity.

Narrower bandwidths also reduce the number of simultaneous signals the rig can "hear". This reduces the AGC pumping action caused by nearby signals, particularly important for CW and digital modes.

Smaller (tighter) shape factors reject more noise and improve selectivity. Larger (wider) shape factors generate fewer problems/complaints with fidelity or ringing.

Q:4.7 What is considered to be a narrow filter?

In the context of (and for the purposes of) this FAQ, a narrow filter is any filter that has a smaller bandwidth than the stock 2.4Khz wide filters. However, most texts will describe a filter as being narrow if its bandwidth is smaller than that of the desired signal.

Q:4.8 What are narrow IF filters used for?

Usually, narrow filters are used to reject unwanted signals or noise. The narrower the bandwidth, the less noise there will be and the better the sensitivity. You can lose part of the desired signal in the process, but that may be preferable to the interference you're trying to reject.

Q:4.9 Can an IF filter be too narrow?

Yes, an IF filter can be too narrow, but sometimes, that can actually work to your advantage. We'll describe only a few specific situations as examples.

When the IF filter's bandwidth is less than the bandwidth of the desired signal, then part of the signal will be rejected. This degrades the fidelity (quality) of the received signal. In phone modes, the fidelity loss is often mistakenly perceived or described by operators as "distortion".

Fortunately, the inherent information redundancy of human speech allows it to be readable even when an overly narrow filter has rejected part of the desired signal. That's where our advantage comes from.

One form of interference is when a nearby signal overlaps your desired signal; as in an overcrowded band.

Rejecting the interfering signal necessarily rejects
part of the desired signal as well. Thus, the filter
is too narrow to allow all of the desired signal
to come through, but it is narrow enough to reject
the interference. While the result is "distorted" in
comparison to a clean signal, it is still more readable
than if you left the interference there.

Another example would involve CW or PSK31. The more
narrow the filter is, the less the interference and
noise. In these modes, it's almost impossible for a
filter to be narrow enough to actually reject part of
the desired signal, as in the previous phone example.
Instead, when a CW/PSK31 filter gets too narrow,
you start to experience the auditory equivalent of
tunnel vision. This can make it difficult to scan
around for signals.

One of the handy things about TPBT is that you can
narrow your effective IF filtering bandwidth at any time.

Q:4.10 What's the difference between IF filters from Inrad vs. Icom?

Inrad filters tend to have a superior shape factor to
Icom's (smaller numbers are better) as well as deeper
stopbands. They also tend to be cheaper.

When dealing with adjacent channel interference, the
filter shape (depth and slope of the attenuation curve)
is generally the prime factor. Inrad filters tend to
outperform the Icom filters for this application.

For example. The stock Icom filter in the 455Khz IF
has a -6db bandwidth of 2.4Khz and a -60db bandwidth of
about 5Khz. That gives it a shape factor of about 2.1
The comparable filter from Inrad has a shape factor of
1.6, a -6db bandwidth of 2.4Khz and a -60db bandwidth
of 3.8Khz.

This all means that the Inrad filter has a steeper
attenuation curve, resulting in better extraneous signal
rejection and improved selectivity.

The Inrad filters tend to have greater ultimate
attenuation than the Icom counterparts. Thus, Inrad
filters tend to do a better job of adjacent signal
rejection than Icom's filters.

However, while the 455Khz Inrad filters are drop-in
replacements for the Icom counterparts, the 9Mhz filters
are not. They need a short piece of coax and a connector

to wired up to the filter first. The adapting connector
plugs into the filter slot, thus alleviating any mods
to the radio itself. Reported assembly times range
from 1-4 hours per filter, depending upon the skill
and care of the installer.

Q:4.11 Which IF should I put an optional filter into?

Realistically, the performance differences between
using filters in the 9Mhz IF vs the 455Khz IF are fairly
small and will probably go unnoticed in normal operation.

Most people make this decision based upon slot
availability and filter cost.

Q:4.12 What's different between IF filters for 9Mhz vs 455Khz?

The 455Khz IF filters tend to have superior performance
characteristics while the 9Mhz IF filters tend to be
less expensive.

Q:4.13 What are the 9Mhz IF filters best for?

When dealing with interference from nearby signals,
the sooner you reject the unwanted signals from your
RF chain, the better. So a single narrow IF filter
in a 9Mhz slot may outperform a single filter in a
455Khz slot.

Q:4.14 What are the 455Khz IF filters best for?

On the other hand, filters in the 455Khz IF seem to do
a better job of eliminating background noise, possibly
due to their superior performance characteristics.

Q:4.15 How do I get the best results from TPBT?

TPBT works best when the 9Mhz and 455Khz IF filters have
closely matching bandwidths. Non-matching bandwidths
will still work, but are less intuitive, which can
cause confusion.

There are several techniques to using TPBT. The one
described below has the virtue of simplicity.

Starting with both filters in their center, detented,
position (widest effective bandwidth), tune in your
desired signal as accurately as possible.

Grasping both IF shift knobs simultaneously, adjust for
the best sound. If you have a nearby, interfering
signal, then you'll probably have the best results
shifting your bandpass away from it.

Now, adjust just the 455Khz IF shift (the inner knob)
in the opposite direction for the best sound.

Q:4.16 How do I configure the IC-746 to use an optional filter?

After you've installed a filter, you need to tell
the radio about it. Using the SET menu, tell the radio
which filter you've installed (by Icom part number)
and which slot it is in. Then, hold in the FILTER
button for two seconds to bring up the filter selector.
Cycle through your available filters by mode and by
wide/narrow until everything is set up the way you want.

See the operator's manual for details.

Q:4.17 How do I configure the IC-746 to use a non-Icom filter?

You have to lie to the rig.

All of the IC-746 filter settings are on the basis of
Icom part numbers. (This is supposed to make things
easier for new operators.) Just tell the rig you've
installed the Icom crystal that most closely matches
the one you're actually using.

Lying to the rig does have a side effect.

The 746 cannot actually shift the IF filters' passbands.
Instead, the 746 shifts the LO frequencies of the 2nd
and 3rd IF stages to shift the signal back or forth,
aligning the edge of the desired signal with the computed
edge of the filter's passband.

Small lies generate small effects, like when you
tell the rig that a 2.1Khz wide filter is actually
1.9Khz wide, yielding a 100hz offset in the control.
Larger lies generate larger effects, like when you tell
the rig that a 400hz filter is actually 2.4 Khz wide,
yielding a 1,000hz offset in the PBT control.

Q:4.18 How do I use a CW filter in SSB mode to receive PSK31?

Icom took their ease of use one step further, and
programmed the rig to prevent the use of a CW filter
while in SSB mode. They didn't know about PSK31 at
that time. So again, you lie to the rig during setup,
telling it that the crystal is wider so that the rig
will allow you to select it for SSB use.

Q:4.19 Why is there only one optional 455Khz IF filter slot?

Nobody knows for sure, but the most popular speculation
is that it made the radio cheaper.

Q:4.20 Where do I install a 2nd Inrad 9Mhz IF filter?

According to K7ZL, the place Inrad tells you to put
the filter is way over on one side in a little opening
next to a fan, and that works fine. But he has found a
second location. When you have the rig opened, if you
go on a line from the 9 Mhz filters, then to the 455
Khz filters, and keep on going towards the front panel,
you will see a square metal plate on the circuit board.
He mounted his second filter on top of the metal plate,
on its side, and it seems to work fine.

==========

S:5. Computer Control

Q:5.1 How do I wire the IC-746 up for computer control?
Q:5.2 What cables do I need?
Q:5.3 What are CT-17, OPC-478, OPC-662 all about?

The IC-746 is computer controllable through a serial
interface, but it is not RS-232. This is both good
and bad. Bad, because you can't just plug it straight
into your computer (wrong voltages, etc...). Good,
because you can control four separate rigs with the
same serial line. Therefore, to connect the IC-746 to
a computer requires some interfacing. Icom made three:
the CT-17, OPC-478, and OPC-662.

The CT-17 is the full boat. Versatile, it will allow 4
rigs to be controlled by a single RS-232 serial line.
It's also the most expensive option and requires
external power.

If all you want to do is connect up a single rig, then
Icom's WWW site lists the OPC-662 remote PC control
cable as the official part. If you can find it,

then great. Most people can't. Instead, many hams have successfully used the OPC-478 PC cloning cable. It's less than half the cost of the CT-17. However, it is very short (1 ft ?) and will require a 1/8 inch stereo to mono plug adapter for use with the IC-746.

When you buy the RS-746 remote control software from ICOM, it comes with a single rig cable (OPC-662 or OPC-478?).

W2ENY sells a complete CT-17 clone and a single rig cable. They're both more complete package than Icom's, coming with cables and software resources on a CD-ROM. They're also cheaper. You can find out more at:

http://www.geocities.com/w2eny/civ/

http://www.geocities.com/w2eny/icom_cable/

You could purchase the nearly universal rig interface, the RigBlaster, from the folks at West Mountain Radio. It does a lot more than simply computer control, and is adaptable to other manufacturers (for a price).

http://www.westmountainradio.com/

There's really not that much circuitry in "simple" interface cables, and many have homebrewed them for as little as $10. Supposedly, the November 2000 issue of QST has a suitable design (with feedback in the January 2001 issue). On-line circuit diagrams based on the QST article appear at:

http://www.ambersoft.com/Amateur_Radio/Icom_Interface.jpg

and

http://www.qsl.net/civ_commander/interface.jpg

KD6UU posted detailed schematics and instructions on eham.net:

http://www.eham.net/articles/1588

and then wrote an excellent updated follow-up article at:

http://www.qsl.net/kd6uu/icomci.html

The actual design of the interface circuit is subject to debate (as the above link will make clear). Several alternative designs (along with a wealth of related information) are available from DF4OR's WWW site at:

http://www.plicht.de/ekki/civ/

And yet another source for circuit information is:

http://www.g3vgr.co.uk/civ.htm

You can also purchase many renditions of these hardware
interfaces from a variety of sources:

Universal RS232 Serial Interface for Icom/Yaesu

http://www.butel.nl/icomr2/icom11.html

K1NU ICOM Computer Control Interface

http://home.att.net/~k1nu/k1nu/Products/

RTS-01 Computer Interface cable for Icom HF Radios

http://rtsars.com/othercables_template.cfm

Q:5.4 What is the control protocol for the IC-746?
Q:5.5 What is CI-V?

CI-V is the control protocol used by ICOM for remote PC
control of their equipment. The basics of the protocol
are documented in the Instruction Manual on pages 74-75.
However, most people will prefer the documentation
available from DF4OR's WWW site at:

http://www.plicht.de/ekki/civ/

or the documentation that comes shipped with W2ENY's
control cables:

http://www.geocities.com/w2eny/civ/

http://www.geocities.com/w2eny/icom_cable/

W7FG Vintage Manuals has listings in their catalog
for both the CT-17 Level Converter and for the CI-V
Communications Interface on their WWW site at:

http://www.w7fg.com/

Q:5.6 What is the CI-V address of the IC-746?

The CI-V address of the 746 is $56 (hexadecimal).

Q:5.7 What computer software is available?
Q:5.8 Where can I get computer software and upgrades?

There are several choices (compromises?) available.
On one end of the spectrum, we have programs that
replicate nearly all of the IC-746 controls on the
computer. On the other end, there are programs that

do computer assisted contact and contest logging.

There is a fairly comprehensive listing of CI-V
compatible software on DF4OR's WWW site at:

http://www.plicht.de/ekki/civ/

We'll mention some of the available software options
below. User reviews for some of the below software
can be found at:

http://www.eham.net/reviews/

and

http://www.qrz.com/search.pl?topic=reviews

** Icom RS-746 software

Icom SELLS a program called RS-746; buying it
is certainly the path of least resistance. It is
available through the usual retail channels. It comes
complete with both software and the necessary cabling
(OPC-662?). Many people describe it as a thing
of beauty. (Of course, beauty only runs skin deep.)

A description of the software can be found at:

http://www.icomamerica.com/amateur/hf/746soft.html

To quote ICOM's own support FAQ (circa May 2001):

Q: Where can I download the ICOM PC programming (or
cloning) software?

A: The ICOM programming software is not freeware,
and is not available for download on our Web site,
or anywhere else on the Internet. It must be
purchased either from an authorized Icom America
dealer, or direct from ICOM. RT Systems also
develops programming software for ICOM radios.

Ray (the product manager at the 2001 Hamvention) was
very firm on this issue. They take a dim view of the
pirated copies available on the internet.

Last word we know of (January 2001), Icom had no plans
to update/fix/enhance the RS-746 software.

** RT Systems software

OK, so Icom refers us to RT Systems at:

http://www.rtsars.com/

However, as of May 2001, RT Systems does not have a 746 control program. They told N8AVX (in February 2001) that they had no plans to do so either.

** Kingsmith Software

Kingsmith Software is developing control software for the IC-746 (RATS IC-746), but as of May 2001, it wasn't available yet. More information is available at their WWW site at:

http://www.kingsmith-software.com/

** W2ENY

W2ENY ships a CD-ROM with lots of software and documentation along with the PC to rig interface cables he sells. Many of the packages listed here are also on his disk.

http://www.geocities.com/w2eny/civ/

http://www.geocities.com/w2eny/icom_cable/

** RadioComm

Arachnophilia has several programs: RadioComm, IcomControl, and EasyTuner (among others). Check out the download section on their WWW site is at:

http://www.arachnoid.com/

** YP Log

Tony Field (VE6YP) makes a radio control and logging program called YPLOG that can control up to 4 rigs at a time and supports logging and contesting. His WWW site is at:

http://members.shaw.ca/ve6yp/

** TRX Manager

Some say that TRX Manager by F6DEX has more features than the original radios. More info can be found at:

http://www.trx-manager.com/

http://www.hosenose.com/trx-manager/

** XMLOG

The freeware logging software produced by W1ECT also talks directly to the IC-746. You can learn more at either the WWW site:

http://www.xmlog.com

or at the yahoo e-mail group site at:

http://groups.yahoo.com/group/xmlog

** TR Log

One of TR-Log's claims to fame is that it will run on
just about any PC. More details at:

http://www.qth.com/tr/

** CI-V Commander

A package that integrates well with the DxLab software
suite. More details at:

http://www.qsl.net/civ_commander/

** IRC

One of IRC's claim to fame is selectable skins.
You get to choose what you want your radio to look
like, be it IC-746, IC-706, or even a 007 spy watch.
More details at:

http://n9zle.tripod.com/

** ScanCat

Very extensive scanning support, including automatic
digital recording to your hard disk,

http://www.scancat.com/

==========

S:6. Problems and Clarifications

Q:6.1 What's that funny rattling noise I hear when I first power on the rig?

Often, its the antenna tuning unit. The relays make
audible clicking/rattling sounds.

Q:6.2 What's that "click" I hear as I tune across certain frequencies?

The clicking noise you hear is very likely from the
relays for the rig's preselector (the service manual
calls them RF filters). At each boundary point, the rig
switches in a different RF filter. There are several:

0 - 1.6 Mhz low pass
1.6 - 2 Mhz band pass
2 - 4 Mhz band pass
4 - 8 Mhz band pass

8 - 11 Mhz band pass
11 - 15 Mhz band pass
15 - 22 Mhz band pass
22 - 30 Mhz band pass
30 - 50 Mhz band pass
50 - 54 Mhz band pass
54 - 60 Mhz band pass
108 - 174 Mhz band pass

Some mistakenly call this the antenna tuner (there is
even some component overlap), however, the preselector
and tuner serve different purposes and are each switched
in and out accordingly.

Q:6.3 Why doesn't the ALC meter work while adjusting the "mic gain"?

Despite what the manual says, the ALC meter only works
for SSB; not FM, CW, or RTTY. Nobody knows what (if
anything) the ALC reading means on the other modes.

Q:6.4 Why can't I program any numbers into the memory names,
the CW memory keyer, etc...?

Use the keypad to enter numbers. The dial only does
letters and punctuation.

Q:6.5 Why isn't my output power up at 100 watts?

One possibility is your DC supply voltage. As shipped,
the IC-746 really wants a full 13.5 Vdc to yield full
output power. Check the actual voltage your rig is
receiving. You may need to adjust the voltage setting
on your power supply.

If your rig isn't getting the voltage you think it
should, then check for voltage drops along the power cord
and across joints and connectors. It's possible to lose
as much as a half volt per connection. Solder joints
and use high quality connectors where possible.

12 AWG wiring is the minimum, but 10 AWG is better.

If you absolutely can't get your voltage up (for example,
total battery power), then you might consider adjusting
the power settings for RF PAs (there are 4 of them).
However, trying to run a full 100w output at the reduced
voltage will most likely degrade the quality of your
transmitted signal (clipping, IMD, etc...). Most hams

decide that the 1-2db gain doesn't justify the crumby
signal.

One last possible remedy for the low voltage problem.
You could get a DC-DC voltage converter. Such a device
accepts 12Vdc in and yields 13.8Vdc output. There's a
price. First, they tend to only be 80-90% efficient,
so a 20A draw by the IC-746 can translate to a 25-29 amp
draw by the converter. Secondly, commercial units like
the Newmar 12-12-35I DC-DC Converter can retail for more
than $900. There are homebrew versions that can handle
the low current requirements of a true QRP rig, but none
that can handle the high current demands of the IC-746.
If somebody finds/designs one, we'd like to hear about it.

Q:6.6 The backlight in my LCD has stopped working. What's wrong?

Short Answer

Its probably one of the display driver transistors on
the S-Logic board behind the display. It will have to
be replaced.

Long Answer

Unfortunately, this has become a problem for some
746's. It's not the actual 'lamp' itself, but one
of the driver transistors. The lamp is fluorescent,
and will probably never wear out. Even if it did, the
lamp isn't available as a separate part; it's part of
an assembly you need to get from Icom.

There is a DC/AC converter driving the "lamp". Check
the S-Logic board for transistors Q301, Q302, Q303,
and Q304. Q302 is the most likely culprit as it is the
voltage regulator for the dimmer function. If you have
a DC voltage on the collector which is variable by the
dimmer function on the radio, then this transistor is
probably OK. Q303 and Q304 are the next most likely
candidates. These 2 transistors are in push-pull
configuration to drive the X-former (base is 180deg
phase shift by the X-former)

Refer to pages 6-1, 9-1, 10-1, and 11-2 in the "Service
Manual" for more details.

Several folks at:

http://groups.yahoo.com/group/IC746

have successfully performed these repairs themselves.

OZ5ACI feels that the way the Q302 transistor is mounted
is a design flaw. Icom used the cooling fin of the
transistor as a soldering point, thus if it gets too
hot, the solder might melt. That slowly deteriorates
the soldering material resulting in a lost connection
and a cooked transistor. He has a feeling that future
cooked transistors can be prevented by simply unsoldering
the transistor cooling fin to lift it and lengthen the
center leg to establish connection at the cooling fins
soldering point.

AH6LE counters that if the transistor gets hot enough to
melt solder (300 degrees or so), then there are other
more serious problems. Most solid state devices won't
survive such temperatures, thus we're seeing the result,
not the cause.

OZ5ACI used an "overkill" transistor from his junk box
and had to cut a bit of the cooling fin to make it fit
under the shield. The original transistor (2SB1201)
is not very tall and can be left at an angle so no
cutting is needed (or wanted!). He says it's all fairly
simple. The only trouble is that the front section of
the 746 has to be taken totally apart and getting it
back together with no dust behind the plastic screen is
a pain. Get yourself a small can of workshop compressed
air or CO2 if you can.

Of course if your 746 is still under warranty, you
may want to consider going that route. Either way,
contact Icom for the parts you need.

Q:6.7 Is there some way to get the Icom-746 to generate DTMF tones?

No. The IC-746 will not generate DTMF tones.

However, you have some options for generating DTMF
tones yourself.

The good news is that Icom's compatibility table
shows that the HM-14 DTMF hand microphone will work
with the IC-746. It even comes with a handy switch to
enable/disable the UP/DN buttons. Remember, you have
to press the PTT switch to use the DTMF pad.

The bad news is that the HM-14 is a discontinued item,
so availability is limited. Also, as K9HFX discovered,
there are apparently two versions of the HM-14.
The version without the scan button enable/disable
switch did not work for him. More information is needed.

While not listed on Icom's compatibility charts as such, VE2MHF reports that the HM-56A also works, even the scan buttons and 14 DTMF memories. However, beware, as VE4HAY reports that the DTMF pad on the HM-56 will also work with the IC-746, but it's scan buttons will not. We have to be careful of the 'exact' model numbers.

Icom confirms that the HM-118T will work with a suitable wired adapter. There is also speculation (but no confirmation) that an HM-95 microphone might also work with a suitably wired adapter. If you succeed with such an experiment, please let us know.

KC2CJW has successfully adapted an Alinco EMS-11 microphone for use on the IC-746. You'll need two cable-mount 8-pin microphone connectors (one female, one male), a couple of inches (maybe a foot) of decent multi-conductor cable, a 470 ohm resistor, and some soldering skills. Paul can provide pin-outs upon request.

Another option is a portable tone dialer, such as one that you could get at any Radio Shack. Just send the tone sequence right through the microphone. Not all such devices give access to the 'A' - 'D' tones, but those tones don't get used much anyway.

Some have suggested wiring a DTMF pad into a microphone cable, much like what you would do for a TNC. However, as yet, nobody has shared any success stories.

Q:6.8 Why don't my "band edge beeps" match the US amateur bands?

Nobody knows what (if anything) the band edge beeps correspond to.

Q:6.9 Can I transmit all the way out to the "band edge beeps"?

Yes, you can transmit all the way out to the beeps. The IC-746, as shipped from the factory, can transmit outside of the amateur radio bands. This has been tested and confirmed on several rigs via dummy loads.

Q:6.10 Can I reprogram the "band edge beeps"?

No, there is no known way to reprogram the band edge beeps. There are no fixes or planned updates from Icom dealing with them.

Q:6.11 Do we know anything about the "band edge beeps"?

The band edge beeps generate a lot of discussion and speculation. As of June, 2001, the band edge beeps on all tested rigs correspond to:

1.8 - 2.0 MHz
3.4 - 4.1 MHz
6.9 - 7.5 MHz
9.9 - 10.5 MHz
13.9 - 14.5 MHz
17.9 - 18.5 MHz
20.9 - 21.5 MHz
24.4 - 25.1 MHz
28.0 - 30.0 MHz

If you know of an UNMODIFIED rig which differs from this, then please let us know.

While nobody has figured out what the band edge beeps correspond to, we have been able to rule out several possibilities.

They do not correspond to the amateur radio frequencies in Japan. For that matter, they do not correspond to the ham allocations in any of the IARU regions.

They are not a combination of all available amateur radio from around the world (i.e. a minimal superset). They are much wider than that.

As wide as the band edge beeps are, they do not encompass all of the MARS (Military Affiliated Radio Service) or CAP (Civil Air Patrol) frequencies. To do that still requires a "mod".

Any other ideas or info?

Q:6.12 How I reset back to factory default settings?

The procedure is listed on page 81 of the Instruction Manual.

While pushing in [F-INP] and [M-CL], push [POWER] to turn power ON.

Q:6.13 What "birdies" does the IC-746 have?

"Birdies" are spurious signals internal/inherent to the rig itself. They are normally generated by harmonics and/or mixing products of the internal oscillators (IF, VFO, display driver, CPU clock, etc...) that are picked

up by one of the RF/IF stages of the rig.

Birdies are usually perceived as silent carriers on
AM and FM and as steady tones on SSB and CW; sort of
like someone tuning up on that frequency. Thus the
perceived frequency of occurrence is affected by your
preferred sidetone.

Often, local noise sources can be mistaken for birdies.

True birdies tend to be consistent from rig to rig.

The following frequencies have been submitted as possible
birdies. There have not been enough correlated reports
yet to confirm these as birdies. More information and
reports are needed.

Q:6.14 How do I adjust the LCD display?

Page 66 of the Instruction Manual describes how to
change both the LCD contrast and the LCD backlight.

Push MENU to select M2. Push button to select LCD.
Push buttons to select lighting or contrast. Turn tuning
knob to adjust value.

Q:6.15 The Noise Blanker doesn't seem to do any good. What's wrong?

Probably nothing. Possibly your expectations.

Noise blankers are placed in the IF signal path, and designed to gate/mute/attenuate out impulse noise. Impulse noise is characterized by very sharp pulses (steep rise time and short duration) such as ignition spikes and certain types of power-line noise.

A good clue comes from the 746 service manual. The NB adjustment procedure uses square wave pulses 30 mv high and 1 msec long.

Therefore, a NB is not a panacea. Unlike an ANL or DSP, a NB will have little or no effect upon static crashes and/or white noise. Noise generated by power supplies, fluorescent lights, and power inverters are generally unaffected.

The NB works best when impulse noise is strong and the signal is weak; like mobile in a vehicle.

Most hams report that the 746's NB is effective against ignition noise, but not as effective as other rigs they've owned.

Noise blankers are not all that sophisticated, and will try to blank out anything that resembles an impulse; even sharp voice peaks in an audio signal. Sometimes, the NB will generate more noise than it removes.

Also, the IC-746 NB is operating within the first IF, where the passband is about 15 Khz wide. Any impulse like component of a nearby strong signal may activate the NB, again possibly doing more harm than good.

The single best way to deal with impulse noise is to eliminate it at the source. A NB is a compromise solution at best.

Q:6.16 How do I adjust or make the NB work better?

The NB is susceptible to both overload and cross modulation from strong nearby signals. Often, turning off the RF preamp or even turning on the attenuator will improve the performance. Remember, the IC-746 has plenty of gain to go spare.

The IC-746 Service Manual does have an adjustment procedure for the NB on page 5-10. Icom Tech Support provided W7GJ with a PDF copy of that page around Jun-25-2001. That PDF file is now available from several places.

http://www.bigskyspaces.com/w7gj/IC-746.pdf
http://groups.yahoo.com/group/IC746/files/IC-746-NB-Adjustment.pdf

==============================

S:7. Misc...

Q:7.1 Are there different versions of the IC-746?

Yes, there are at least two distinct versions of
the IC-746.

While most of the indications are circumstantial,
one definitive piece of evidence are the two different
procedures for modifying the transmit/receive range.

Another definitive indication are the 2m differences
between the U.S., Japanese, and European versions.
In Japan, the IC-746 has different auto-repeater offsets
and is limited to only 50w RF output. In Europe,
the IC-746 does not transmit above 146Mhz and has no
auto-repeater offsets at all. There's also a version
in Australia that is limited to 20/8 watts on 2m for
FM/AM.

There are varying reports about the necessity of a
microphone pre-amp when using Heil microphones, leading
some to speculate upon differences in the microphone
input circuitry. K9HFX was unable to generate DTMF
with an HM-14 microphone; that might be related.
There isn't enough information yet to be conclusive.

Some rigs seem to have problems with the transistors
that drive the LCD backlight, some do not. This might be
due to a circuitry change, or a difference in assembly.
The jury is still out.

The only way the issue will be resolved conclusively
is for someone to organize a data collection effort
to sort out these details by serial number. So far,
no one has volunteered.

Q:7.2 What TX/RX "mods" are there for the IC-746?

"mod" is slang for "modification".

Most people who ask about modifying their radio are
looking for ways to make the IC-746 transmit or receive
additional non-amateur RF bands. The 746 already has
general receive coverage from 0.5 to 60.0Mhs, so no
"mod" there.

Modifying the IC-746 to transmit outside of the
amateur bands is generally considered to be illegal.
There are a few exceptions; like perhaps MARS/CAP,

transverter usage, changes/additions to ham bands,
etc..., but they can become controversial.

Icom will give you the correct mod for your IC-746 based
upon your serial number, providing you give them a copy
of your MARS license to prove eligibility. If you let
Icom make the mod for you (small fee plus shipping),
then the mod will not void your warranty

That said, MARS/CAP/TX/RX modifications for the IC-746
(and many other radios) can be found at:

http://www.mods.dk/

Another source for the TX/RX mods is QRZ.COM

http://www.qrz.com/download/mods-i-k/ic746.txt

Q:7.3 What other "mods" are there for the IC-746?

Not all mods are about TX/RX frequencies. Here are
some of the others.

W2ENY has devised a way to replace the stock 15KHz or
9MHz IF filters for AM work with 6KHz filters.

http://www.geocities.com/w2eny/icom/filter.htm

AH6LE has modified his IC-746 to provide safe sequencing
for EME work.

http://www.ah6le.net/radiomods.html

OK2WY has a "Simple CAT / programming interface for
ICOM RIGs". Rumor has it that he has also designed an
in-board step attenuator.

http://www.qsl.net/ok2wy/projects.htm

K7YVZ has proposed a mod to the VHF section to provide
separate transmitting and receiving antenna ports.
The details can be found at his WWW site:

http://www.qsl.net/k7yvz/746mod/

G4YTL describes the same thing at:

http://www.mods.dk/mods.php3?radio=icom&model=ic-746&selectid=1919#1919

While not technically a "mod", NI4L has outlined the
alignment procedure for increasing the RF power output
above 100 watts. Opinions differ as to how much strain
this may or may not place upon the PA transistors or
upon the internal ATU. The alignment procedure can be
found at:

http://www.mods.dk/

W2FS wrote an article for the Dec 99 QST entitled
"A Direct Frequency Entry Keypad for ICOM Transceivers".
The "Millennium QSYer" is based upon that design and
available from:

http://www.john.hansen.net/keypad.htm

Some folks have replaced the transistors that drive
the LCD backlight in an attempt to prevent overloading
and burnout. See the question devoted to LCD lamps for
more details.

N0UK (Chris) came up with a "poor man's" TCXO that
substantially reduces frequency drift, particularly
for 2m. He stuffed the 60 Mhz LO compartment with
a few "cotton wool balls". It doesn't eliminate
the drift entirely, but does slow it down to a crawl.

Q:7.4 I'm brave; what other "mods" are there?

While several other "mods" have been discussed, to date,
we don't know of anyone brave enough to try them.

The stock 455 Khz IF filter is a 2.4 Khz wide ceramic.
The PC board is drilled and traced for a full fledged
crystal filter (either from Icom or Inrad). In theory,
replacing the cheapo ceramic filter (Murata CFJ455K)
with a superior crystal filter should improve the rig's
performance. One source of info claims that to do
this mod requires changing 2 resistors (R701 and R704)
from 10K to 3.9K to change the impedance seen by the
filter from 2K to about 1.2-1.5K.

Likewise, it is speculated that the IC-746 has cheapo
PIN diodes in the detector circuit. Again, in theory,

replacing these with higher quality components
(preferably matched) would improve performance, in
particular, the 3rd order intercept point.

A few folks have noticed that the IC-746 is less
sensitive below 1.6Mhz. This appears to be due to an
additional attenuator being switched in to protect
the first RF amplifier from overload by broadcast
transmitters. Some theorize that removing the extra
attenuator (by simply bypassing it with a jumper) would
improve the sensitivity, while others point out that the
atmospheric noise level is too high to put any additional
sensitivity to use.

Again, we don't know of anyone willing to admit to
performing any of these modifications. If you perform
one of these (or some other esoteric "mod"), then we'd
love for you to share your results with the rest of us.

Q:7.5 Can I operate 2m on reduced power?

Sure, just turn down the RF output power control (along
the bottom front edge of the rig).

Too inconvenient? Then you could get inside and tweak
the pots that control the RF PA settings. There are 4
of them for HF, 6M, 2M and AM (R989, R991, R993, and R990
respectively). Refer to your Service Manual for details.

Q:7.6 Where can I find plugs for the ACC connectors?

They are 7-pin DIN connectors (the old style AT keyboards
used 5-pin Din). A couple (of many) possible sources
are:

Digi-Key http://www.digikey.com/

BUX CommCo http://www.buxcommco.com/

Your local electronics store either have them or can get
suitable substitutes. For example, most Radio Shacks
have the 8-pin DINs in stock (#274-026). They are
compatible after you remove the center pin.

Q:7.7 What are the pin-outs on the ACC-1 connector?

Page 72 of the Instruction Manual has the full scoop,
Here is a brief description.

1 RTTY (FSK) HIGH > 2.4 Vdc
Low < 0.8 Vdc
< 2 ma output current

2 GND ground

3 HSEND (HF PTT) ground to transmit on HF
goes to ground when transmitting
< 20 ma output current
< 200 ma input current

4 MOD (audio in) 100 mV rms at 10,000 ohms

5 AF (audio out) 100-300 mV rms at 4,700 ohms

6 SQLS goes to GND when squelch opens
0.1 ma current

7 13.8V max 1A output current

8 ALC (0 to -4VDC yields 0 - 100W)

Q:7.8 What are the pin-outs on the ACC-2 connector?

Page 72 of the Instruction Manual has the full scoop,
Here is a brief description.

1 8V (< 10ma) (+/- 0.3V)

2 GND same as ACC-1 pin 2

3 HSEND (HF PTT) same as ACC-1 pin 3

4 BAND 0-8 Vdc depending upon band

5 ALC same as ACC-1 pin 8

6 VSEND (VHF PTT) ground to transmit on VHF
goes to ground when transmitting
< 20 ma output current
< 200 ma input current

7 13.8V same as ACC-1 pin 7

Q:7.9 Does audio to pin 4 of ACC-1 trigger the VOX?

Pin 4 of ACC-1 does not trigger the VOX circuitry,
nor is the level of that input affected by the front
panel mic gain control.

Q:7.10 Where can I get replacement power connectors?

Short Answer

The connector you need is often called an "OEM-T" connector. You can order Icom part number OPC-025A or OPC-025D from any of the major ham equipment retailers for a pre-wired cable.

Long Answer

Icom's cable compatibility chart lists the OPC-025A. Most retailers sell the OPC-025D. Both apparently work. The OPC-025A is rated for 20 amps, while the OPC-025D is rated for 30 amps. Most hams prefer the beefier cables.

BUX CommCo sells equivalent cables/connectors that are cheaper. You can find more info at:

http://www.buxcommco.com/

Rather than finding another Icom connector, many folks put inexpensive connectors on the cables of all their rigs and power sources. That way they can use any rig with any supply no matter what brand. Particularly handy for switching between mobile rigs. Even Radio Shack has these, cheap.

One very popular connector is the Anderson PowerPole.

http://www.andersonpower.com/

which is readily available from either

http://www.dcpwr.com

http://www.powerwerx.com/

In fact, the PowerWerx folks have pre-wired, PowerPole to OEM-T cables ranging from 1 to 10 feet long that are much cheaper than the Icom part (less than half the cost). You can always just snip off the PowerPole connector if you don't want it.

Many clubs and organizations have been standardizing on the PowerPole connectors for their high amperage 12VDC power. This makes all of their equipment inter-compatible and interchangeable; a real plus in an emergency. There's a good article on that subject at:

http://www.dcpwr.com/standard.html

Q:7.11 Where can I get replacement microphone connectors?

You've got plenty of sources:

Radio Shack - P/N 274-025 for the plug.

BUX CommCo at:

http://www.buxcommco.com/

The RF Connection at:

http://www.therfc.com/micconn.htm

Q:7.12 What is "Lo-Fi" SSB operation?
Q:7.13 What is "Hi-Fi" SSB operation?

Trick questions, as they are both the same.

They both refer to attempts to transmit/receive higher bandwidth/quality SSB signals. Basically, hams are trying to improve audio fidelity; they are striving for "Hi-Fi" quality. Few (if any) SSB rigs will ever achieve the 20 Khz bandwidth normally associated with "Hi-Fi", thus the "Lo-Fi" pun.

"Hi-Fi SSB" audio is a hot topic within ham radio. Everyone wants the best transmitted audio they can get, however, not everyone agrees upon what "best" is. The issues become even more heated once you add concerns over excessive bandwidth usage and splatter.

The characteristics/capabilities of the IC-746 allow this FAQ to take a neutral position in the debate.

Stock, the IC-746 has a SSB bandwidth of about 2.4 Khz. That bandwidth can be widened to as much as 3.4 Khz without deleterious effects (the FAQ describes how elsewhere). Pushing beyond that point requires more effort than most people are willing to invest.

A lot of "Hi-Fi" activity occurs on or about 14.178 Mhz.

Q:7.14 How does one improve the fidelity of a received signal?

Here is a checklist of several possible actions (not in any particular order).

* Assure precise tuning

* Use a high quality external speaker or headphones

* Try to run without pre-amps or with attenuator

* Reduce the RF gain (increase AF gain to compensate)

* Set TPBT to widest bandwidth

* Use wider IF filters

* Turn off NR

* Turn off ANF

* Turn off NB

* Set AGC to SLOW

* Be sure input power is greater than or equal to 13.5 Vdc

* Use an external AF amp via the ACC ports.

* Equalize the AF output.

Q:7.15 How does one improve transmission fidelity?

Here is a checklist of several possible actions
(not in any particular order).

* Using TCN, set the "SSB TX Tone" control to H.

* Turn off COMP.

* Use a higher quality microphone.

* Use microphone shock mountings and pop filters.

* Use external microphone equalization.

* Feed transmission audio directly via the ACC port,
bypassing the microphone preamp.

* Adjust by monitoring your signal on a second receiver.

Q:7.16 Can the IC-746 transmit at less than 5 watts?

Yes, with the help of some external circuitry.

The IC-746 isn't really designed for QRP operation
(the 2+ amp draw on receive should prove that).
The front panel control will only get you down to
about 4-5 watts. However, you can apply a voltage
to the external ALC input to get even lower. 0 to
-4Vdc input yields 0 to 100 Watts output. One ham
even uses a simple voltage divider/pot arrangement
powered by 2 AA batteries.

K5UHF warns that there can be a minute moment of higher
power output before the external ALC level kicks in.
Not normally a problem unless you're driving input
sensitive equipment; like transverters.

Q:7.17 How do I turn on both HF pre-amps at the same time?

You can't. Nor would you really want to.

HF preamp 1 is transistor based and yields about 10db
gain for the 1.8 - 54 Mhz range (160m to 6m bands).
HF preamp 2 is IC based (presumably an op-amp) and
yields about 16db gain for the 21 - 60 Mhz range (15m
thru 6m bands.

In practice, each HF preamp will work on any HF band.

The sensitivity of the IC-746 is so high that neither
of the HF preamps are rarely needed. You'll need the
attenuator more often than the preamps.

Q:7.18 How do I adjust the 746 for best AM performance?

The 746 performs well on AM for general communications.
However, many operators choose (and fall in love with) AM
for the sound. For this, the 746 can fall a little short
of expectations.

Start by improving your audio fidelity as described
elsewhere in the FAQ. Then, WU1T (Damon) suggests that
the trick is to back off the carrier level. You don't
want to run full carrier or full mic gain. He also
suggests turning compression off when using AM.

For general guidelines on setting up modern transceivers
for AM use, check out:

http://www.thebizlink.com/am/tech/htm/plastic.htm

==========

Manual Errata

P:2 (12) AF CONTROL references p.12, should be p.11

P:6 External speaker and remote interface jacks are swapped.

Page 6 has the external speaker and computer remote
connectors mislabeled (reversed). Looking at the rear
of the rig, the REMOTE jack is on the left and the
SPEAKER jack is on the right.

Page 68 shows the connections properly.

P:9 Incorrect page references in MENU descriptions at
the bottom of the page.

(4) TCN p.20 should be p.19
(7) KEY p.24 should be p.23
(8) RTY p.30 should be p.29
(9) TON p.35 should be p.34
(10) TSQ p.33 should be p.32

P:15 BAND EDGE BEEPS simply do not work as expected.

This is more a failing of the radio itself than it is
an error in the manual. For more info, refer to the
rest of the FAQ.

P:22 TRANSMIT button does not transmit on CW

This is more of a clarification than an error. In
every other mode (AM, SSB, FM, RTTY), the TRANSMIT
button actually "keys" the 746 to transmit a signal.
In CW mode, you have to activate the keyer as well.

Most operators use QSK when operating CW, which
makes the TRANSMIT button superfluous.

P:32 No ALC adjustment for FM

In "FM Operation", under TRANSMITTING, section 5 it
states: Push TRANSMIT...and adjust the MIC GAIN so
that the ALC level in the ALC meter stays in the ALC
zone when speaking into the microphone.

The ALC meter is maxed out on any setting of the mike
gain and has no meaning or effect under FM.

ALC adjustments made in SSB carry over modes. Once you
get the audio drive level adjusted for proper SSB
modulation, then the audio drive level ends up being
right for all the other modes as well.

P:33 The diagram at the top of the page is incorrect. It
shows only one stock filter (2.4 Khz wide) at the
9Mhz IF. There is a second, 15Khz wide, filter at that
point instead of the direct "through" connection shown.

P:42 reference for Noise reduction p.39, should be p.40

42 15Khz filter at 9Mhz IF

P:46 No ALC adjustment for either AM

In the "Speech compressor" section, the ALC meter
doesn't appear to work on AM.

ALC adjustments made in SSB carry over modes. Once you
get the audio drive level adjusted for proper SSB
modulation, then the audio drive level ends up being
right for all the other modes as well.

The "Speech compressor" instructions fail to make clear
the fact that both the MIC GAIN and COMP GAIN controls
will have to be adjusted for proper operation.

P:56 While the diagram specifically highlights the numeric
keypad on the radio; the instructions fail to mention
that numbers are entered via the keypad instead of the
tuning knob.

P:56 in 1st paragraph, the reference "for programming scan edges"
is p.56 but should be p.52.

P:68 The box describing the ALC JACK lists an input voltage
of "0-4 V". It should read "-4 to 0 Vdc".

P:70 In the box labeled "ANTENNA SWR" the manual states (in part):

When the SWR is higher than approx. 2.0:1,
the transceiver's power drops to protect
the final transistors.

Actually, power starts cutting back much earlier than that;
somewhere between 1.7:1 and 1.3:1

P:77 The UT-102 Voice Synthesizer is installed in the
"bottom" of the transceiver, not the "top". Also,
the "shield cover" is not involved.

P:79 The "NOTE" for "CONNECTING A NON-ICOM AMPLIFIER",
should read

NOTE: The specifications for the SEND relay are
12 V DC at 20 ma (milli-amps). If this
level is exceeded, an external relay or
switching transistor must be used.

The 746 SEND line is designed to interface to a
solid-state amplifier trigger, like those used in Icom's
power amps. Many people have damaged their rigs by
trying to switch amplifiers with higher voltage/current
requirements.

Contributors + Acknowledgements

There are two kinds of contributors to this FAQ: direct
and indirect.

Direct contributors have written entire passages that
have been incorporated nearly verbatim. Often, they are
specifically authoring something with the FAQ in mind.
Also, they are individuals who have been recruited to
review specific sections prior to distribution.

Indirect contributors have had their comments and input collected and assimilated from public correspondence on discussion and news groups, often without their knowledge. They were simply answering questions, offering advice, or otherwise just helping people out.

The coordinator has not tried to keep a record of who has contributed what; the book-keeping would be horrendous. All sources of information have been INVALUABLE and are APPRECIATED. Listing contributors here is a small token of thanks for their neighborly spirit and generosity. The Coordinator apologies if anyone has been missed.

487. FS: ITT HF Power Amplifier 2-30Mhz 1KW

Newsgroup: rec.radio.amateur.equipment
Date: 2002-01-11 01:11:45 UTC
From: s.w.bissell@worldnet.att.net
Message-ID: <3c3e3786.9531098@netnews.worldnet.att.net>
Source record: 49193

I've got a ITT Mackay, Super Heavy Duty, 1KW H-F model MSR-1020, coast station power amplifier. 100% solid state with the AC Power Supply Model MSR-6212 (220vac) It features complete coverage between 2 and 30Mhz. The amp uses a broadband matching transformer to feed the input signal to 4 identical 250W (highly under-rated) amplifier modules. The amplified signals are then applied to a broadband matching transformer, with it's output switched between 5 band-switch filters providing suppression of the unwanted harmonics. Interconnection cables included. I'm asking $750 for all. I've got pictures for serious inquires only. Please E-mail me directly if you have any questions. Both units total apx. 120lbs. Pick up in Houston, Tx or I can meet half way to S.A. or Big D. . I could box ship and insure it but the buyer would have to pay the shipping from 77088.
Thanks
Steve KC5TFL

Hi Bill,
I consider the SN filter too narrow for any kind of normal use. The audio sounds very restricted and listening becomes annoying very fast. OK for contesting or digging the weak ones out of a pile.
Adding the YK-88S will greatly improve selectivity. This rig didn't come with a real filter in the 8.83 IF like the 430 did, and depends on the cheap Murata ceramic filter in the 455 IF for all it's selectivity on SSB. Same is true for the TS-450. I don't remember offhand whether the S is a 2.4 or 2.7khz filter.
I can recommend the Inrad 2.1khz filter. It provides more selectivity than the YK-88S without the audio restriction of the SN filter. A good compromise.

494. Headset / mic recommendations?

Newsgroup: rec.radio.amateur.equipment
Date: 2002-01-11 03:44:36 UTC
From: Max <ve3tmt@rac.ca>
Message-ID: <8ct%7.18363$B36.3281591@news20.bellglobal.com>
Source record: 49100

I find the audio output from my FT900 while mobile is somewhat lacking. I have tried external audio amps only to be cursed with feedback. I am thinking about using a single ear headset/mic and run the vox on the radio. I have modified the front mic connector to have receive audio on one of the pins. Any recommendations on a headset/mic combo? I like the Heil 706 model but apparently it only works on the Icom. Do the mic elements themselves require a +DC voltage? The radio does have +5V on one pin as well. What about the headset/mics available for computers? Would they work?

Thanks for any help.

Max ve3tmt@rac.ca

I've had lots of experience replacing them. The original Sanyo batteries have a nasty habit of leaking and ruining the digital board, even before they drop below 3 volts. I've been using the Swiss-made Varta batteries. They're supposed to be non-corrosive--time will tell. Replacement is easy, unsolder 3 terminals and solder in the new one. Of course, you have to remove the top and bottom covers, drop the front panel, and remove the screws holding the digital board first.
Proceedure and battery are the same on the TS-850.
Greg K3EWZ

John,
I've run into the same thing, mostly in the area of the transformer. The joint looks perfect, but suck the solder off and the pad has a dull untinned copper look. It requires cleaning before the pad will take solder. As I suck the solder off other pads in the area, most are hanging on with just a small silver dot.
I'm not sure if this was a manufacturing problem or something that occurs over time, as these boards worked for years and the problem only seems to appear in an area that runs hot. I've worked on a lot of boards over the years and never seen anything like it. As you said, "very wierd".
On the plated through hole problems, I've had some play on the bench for days without a failure. I found the best way to get them to fail is to give them back to the customer. They will usually fail within 5 minutes--hi.
Beep, flash, transmit, change bands, run up the band,-- "haunted radio syndrome".
On 940's, my favorite is trying to re-solder bad joints under the LO on the PLL board with wax bubbling up through the holes. Finally started turning the board upside down and melting the wax out with a heat gun into a tin-foil "pan". I melt it back in when I'm done.
Sure glad the Japanese have finally figured out how to make double sided boards.

you should try the kiwa loop.
it is better than the two you are inquiring about.
but it is not cheap. about $300 iirc.

Well, after the dose of SPAM I have received from posting just -ONE- time in the newsgroups with my real e-mail address, I no longer put it in ANY postings unless I change it to where it's so convoluted, it takes effort to e-mail me anyhow. There were some jerks here a couple of years ago that were too lazy to remove dashes from my e-mail address and flamed me because I put them there. That's pretty rediculous, flaming someone who is only trying to keep their e-mail clean! But if you aren't too lazy to change letters- my e-mail address is: k(r)4+w=m@s+c.rr.com Just remove all the parentheses, plus signs, and equals and it'll go through. Or go to QRZ.COM and click the link if you don't want to go through the trouble.

I had a friend that owned a radio store that went under. I saw exactly
the same thing.
When he finally folded, all the cheapskates that were more interested in
saving a dollar than supporting a local business cried the blues because
there was no local ham store. The way these guys talked, you'd have thought
it was the owners fault.

OldRadioGuy et al,

Thanks for the heads up on that link, eyes are getting older, missed that one!

I've also re-done the server to make the online catalog faster by minimizing the SSL traffic to the ordering process and not the whole store itself.

-Ben

Greetings from the Lone Star State...

I am looking for CB radio equipment by Raytheon, Apelco, and Webster. This would be equipment from 1960 through about 1971. There are certain models that I need for the collection, but I'll consider all models, in any condition, including parts rigs. Also looking for any kind of written information, such as manuals, magazine ads, product reviews, and so forth.

Check out the on-line Raytheon/Apelco/Webster CB Radio Museum at this address:

http://www.qsl.net/k5dh/raytheon.html

Lots of pictures, advertisements, and history.

Before anyone "bashes" me for inquiring about CB gear on the amateur radio newsgroups, I must point out that the majority of the gear in the collection and the majority of the historical information I've compiled has come to me from HAMS, not from CBers.

73,
Dean, K5DH

I have been using "computer" headsets for 3 years. I routinely get compliments on my outgoing audio. You will need to put 3 to 5 volts of dc + on the audio line to make it work.

> customers are "these guys" & the other 50% are the "nice guys" , like some of
> the previous posters. I personally couldn't handle his job.....

I wonder if you aren't really him...He calls people that wonder about
sale tax jerks or "those guys"? No wonder half go elsewhere. Of course
$1.70 is rinky dink, and I wouldn't personally be worried about it,
but any orders I would make from a ham store will be in the 100's of
dollars, and the tax will most certainly be way more than $1.70. The
last purchase I made it was like 75-80$.
But I'm not like the people you describe. I've never called a dealer
ever to pick his brain. Not even once. I do my own homework, and I
wouldn't trust a dealer for accurate info anyway. Thats like walking
into a car dealer and asking if the car ever breaks down, and if so,
what is the usual problem. Think he's going to say anything?
Unlikely...All this whining and moaning about the poor old dealers
really doesn't flush. Want to know why? He gets the same chance to
sell to all the other states tax free. So if he wants to stay busy, he
better have good prices. He's in no worse shape than any other dealer
who has to put up with the same thing locally. Now the price he pays
for rigs, thats his problem. When I bought my last rig, I checked the
website of our local store to try to get info on the rig and the
price. I was willing to give him a fair shake. But the web site wasn't
kept up to date,barely worked, and was a year behind. So sorry, but
off I go elsewhere. He shot his own foot off in that instance. But
even so, I doubt he could have beat the price I payed out of state.
The big three dealers couldn't either. I'm bottom line $$$ when it
comes to big rig purchases, and I don't care if it chaps every ass
from here to Cleveland. I'm not rich, and I don't give away money. I
don't care about local service, because if the rig craps out under
warranty, it's going back to the maker, not the dealer. He must not
hate his job too bad, or I would think he would get out. I know I
would if I didn't like it. MK

I like the sound of the Turner +2 base mic on my Kenwood, although I use a 440SAT.

Always used D-104's with my TS450S till I monitored myself through my W2IHY noise gate / EQ box. Although I could easily tailor the D-104 audio with it I have switched to the Astatic Silver Sidebander which EQ's much better and can deliver a wider range of audio profiles than the D-104's.

Now I can transform the transmitted audio from ear-piercing pile-up busting high frequency content all the way through 'normal' and on to the warm, friendly, sexy so-called hi-fi audio many folks like to hear.

FS: We have over 40 various TNCs and multimode controlers left over
from projects. All prices do not include shipping.

3 AEA PK-232 $75 each pretty good condition
6 AEA PK-88 $40 each fair-very good condition
1 AEA PM-1 HF Packet Modem $40 very clean
1 AEA PK-12 $40 works but scratched up case

5 Kantronics KPC-3 $50 each very good condition
1 Kantronics KAM+ $130 older white case, good condition
1 Kantronics KAM+ $150 latest black case, excellent shape

4 Paccomm Spirit2 19200 baud tnc $175 each excellent condition
1 Paccomm Pactor 1 $60 very good condition
1 Paccomm TNC-320 $60 very good condition

2 MFJ-1278B $150 1 New in Box, 1 like new
1 MFJ-1276 $130 New in Box
1 MFJ-TNC2 $40 Very good condition

2 Hal PCI-4000M $400 each New in Box
2 Hal DXP-38 $275 each Like new in box used 10 hours

2 Tigertronics BP-1 $20 each

My most favorite thing: A full page add in QST with all the pictures and by each one it says "call for prices"!

My second favorite thing: Finally finding the item you want on their web page and then it says "call for prices"!

I guess that's designed to keep you from doing your home work so when you call they can pressure you for an instant decision.

I like shopping for much of my stuff in person. So I support the two
"local" stores (one 70 min drive away, the other 2 hrs+ drive away).
For smaller stuff (i.e., some accessories) I shop online.

There is always a steady flow of purchasers in both of my "local"
stores. I think they're doing OK.

Well,
in NY anyway, you are required to pay use taxes on anything you buy
from out of state. I know, nobody does so, but by law you are obligated
to do so to stay within the law. So you don't "save the tax" by buying out
of state, you merely break a law by not paying the tax.
How do I know? New York state was tax department was nice enough
to send me a bill for the tax due on an out of state purchase. With interest
and penalty. Nice huh?

Not a lot. Icom has the IC-746 PRO and IC-756 PRO-II, but these are
essentially upgrades of existing models. Anything about ready to be
introduced will probably show up at the Dayton Hamvention.

552. Free to a good home Racal 2305 20Mhz to 2 Ghz

Newsgroup: rec.radio.amateur.equipment

This is a complete 20 Mhz to 2 Mhz military surveillance system. It is complete with all modules and in good working order. It also includes all documentation and connecting cables. It is surplus to my needs and I have to move it out of the shack. The only catch is that it is in Anchorage Alaska and I am unwilling to attempt packing and shipping. If you can pick it up or arrange for it to be packed and shipped it is yours for the asking. This equipment was removed, about three years ago from the surveillance suite of HMS London. All equipment dates from the early 80's.

Mike Taylor
AL1N

PS I will hold it until the summer if anyone is coming to AK with a camper this summer.

553. January Specials from www.sauderelectronics.com

Greetings,

I'd like to thank all of you who visted the website(http://www.sauderelectronics.com) and ordered, what great support the online community has shown for the site and its products. To answer many of you: Yes, the prices on the items are not introductory, they will remain the same as long as our customers(you) continue your great support. I'd specifically like to thank Frank Leaf who was extremely helpful in our online endeavor and volunteered to help with website improvements.

So, with no further ado, I announce our January USENET only specials! These specials are not posted anywhere else(except the website) and were designed for everyone who has supported our effort thus far:

1. Pack of 10 Silver Teflon PL259s for ONLY $8.00!
2. SMA Adaptors, mix and match, 3 for ONLY $10.00!
3. UHF SO239 3" Mag Mount, $2.00 off the regular price of $15.00 for ONLY $13.00!
4. Any order over $25.00 receives a special mystery gift FREE!

Order now at http://www.sauderelectronics.com

Thanks, and 73's

-Ben

This is nonsense. I fly with several radios and GPS units all the
time.

I have never had to "explain" anything. In fact I have never been
asked to turn one on. Since Sept. 11 I have flown at least 30 times
both in the US and Europe same story every where no problems
with the radios. What I do pack in my luggage are long sharp antennas.
I have had no problem with rubber ducks not even a question.

Packed in the suit case and it is vulnerable to theft and the
airline is not responsible for electronics in luggage--read the
ticket.

Take it on board leave it off and in your bag and don't worry
have a nice trip.

I use the Pocketsat software all the time and it performs flawlessly.
Have you downloaded fresh Keplerians? You can get them in a Palm
Data Base format from the author's website. Once you have them
installed then you have to load them into the program the instructions
are all in the documentation. What I suspect is that you have old Keps
and that is why it seems to be getting the wrong answer. Mine is
right on with good Keps and right off with old ones.

Ship your rigs via FedEX. Ship all valuable items via FedEX. You can purchase insurance and they are very unlikely to loose it. This allows you to ship all you want. Read your ticket information. The airline won't do much for you on your return flight, if they loose your stuff. They figure that you are at home and should have more stuff there. Ship them to your motel room or the place you are staying. Carry on bags should include a change of cloths, cash and documents needed when you arrive. never put all of your clothing in your checked baggage. To much hassle when the airline looses them. One last thing always have contact information in your bags. The tags on the outside can get lost in handling.

Source record: 49068

Hello All,

I recently aquired a TK-706D 2-channel VHF radio that has a
very low audio output level. When un-squelched the static level
is very high just the received voice is low. I think I have traced
it down to the FM receiver module/detector which is a small
solder in hybrid package. Does anyone know where I would
get such a component to repair it. It seems like a good radio so I
hate to junk it for this problem.

lol

You duplicated the theory behind the Heil Dual mic without spending all that money.

I agree, the D104 standard mic is crappy for most of todays rigs, unless you want
nothing more than ear splitting pile up busting high pitched audio.

Depends on your uses, a lot! As an HFer, I like the 746 much more, not being very interested in the digital or vhf uhf modes..I probably dont make full use of an 847...even if I did, I dont like it that much as HF. But we are talking "like" here, it seems to function well.. I saw a comment that said it wasnt as good on HF as others, but i couldnt tell...I still feel the 746 is one of the BEST HF rigs around, especailly for the money. Used the 847 my be bought a tiny bit cheaper than the 746, with the 746 averaging around 1050 retail and the 847 averaging maybe 50 bux less...some may be found cheaper, some may cost more.....A lot depends on what you are used to. Others may have more "technical views" and that could be helpful, another thing positive for the 746, is no Known consistent "disorders" its been a trouble free rig, in general. Dont know about the 847....When it comes to the smallest rigs though, I think the FT 100 has out done Icom 706's....theres one opinion, be interested to see the rest..73 Murray

Isn't that fairly new equipment? You should be able to get service
on it from IBM if it's still in warranty or if you are willing to
pay their prices for carry-in or mail-in service.

I suspect that CompUsa and Best Buy (and maybe Fry's) could do it,
too.

Another way is to google for "ibm 380 laptop floppy drive".
I found lots of hits that way, and some of them look promising.

hey, at least you don't have Richard 'LimpDick' Durbin

first we had Paul 'BowTie' Simon, then Carole Mosely 'I don't know where all
that money went' Braun, now Durbin.....

this state gets worse and worse, the only good part is that Hillary chose NY
instead of IL to run in.

Ha! I did'nt vote for her! I knew better, for what it's worth.
She has done NOTHING for us in our corner (WNY) of
the state... Flew here like a dozen times, "buddied" up with
everyone, but turned her back on us once in office.

I expect that sales and use taxes are probably on most states
tax rules. It's just very difficult to collect. I suspect the vendor
I did business with (it was TX back in 1983, I bought a computer)
was getting audited, and they had a "repriocity" agreement at
that time with NY, and was required by auditors to send the
info to NY. I don't know. I avoid TX purchases if I can now
just in case....
And yes, as we get further into an "online" society, the states
will find a way to collect these lost revenues. They are loosing
tons of $ to this, and they WILL find a way. As more states
scream for federal aid, maybe a "federal sales tax" thats sent
back to the states? Who knows...

Sorry for being so off-topic.
Vic

586. FS: Icom IC-746

Newsgroup: rec.radio.amateur.equipment
Date: 2002-01-13 00:32:15 UTC
From: res075cz@gte.net
Message-ID: <3c40d3c3.9550648@news.gte.net>
Source record: 49090

I have for sale a beautiful IC-746, serial number 3462. I bought this new
from Burghardt and have used it less than 20 hours. It was my second rig,
after the IC-756 PRO and I never needed to use it. If you are a CW man you
will love the filters I have in it. It makes it a super CW rig. I have the
FL-100 500Hz filter and the Inrad 400 Hz filter in the 455 Khz IF. The
filters make the twin PBT work like magic. If you are not a CW operator you
can unplug the filters and sell them in their original boxes and recoup some
of your money. I will include the filter boxes with the rig. Of course
everything that was sent to me will be sent to you (manual, fuses, cable,
microphone, etc.). I am a non smoker. This rig was put in place in my
console and never touched except for weekly checks and dusting. It works
great on six and two meters.

I am located in San Angelo, Texas. If you are local, come see it. I can
also put it on the air although I work very little phone. I am asking
1050 dollars.

Despite some of the grumblings here, I have found the
http://www.eham.net reviews to be a far more useful
source of information than what you would find here.
Instead of re-inventing the wheel in this group, go to
http://www.eham.net/reviews/products/14 for info
on HF transceivers.

I'd be thinking a bad doorknob cap offhand. You seem to be getting
drive. So offhand, I'd guess the bandswitch is probably ok. Check the
loading caps and see if one has opened up. Others may have some better
ideas. MK

Source record: 48999

Hi, Here in North Carolina we also have rules that require out of state purchases be declared and use taxes paid.

It is easy for others to say 'tell em to stuff it..' but they do not understand the
implications.. NY will place a tax lien on your bank accounts, collect the taxes and extra penalties (deserved or not) and your credit file will show it all.

Plus, they will place liens on your property so if you try to sell the house, no way
would anyone buy it with a tax lien attached.
The govt. has deep pockets for lawyers and you and I do not.

So we pay the penalties if we get audited (or the store is audited).

How many of us purchase from Lands End or LL Bean etc. ??

There are many software packages out there that can track all of these purchases and sooner then later state govt. will force retailers to collect and report these transactions.

Just like to corner hobby shop, the local radio shop is a rare find.

Hi,
Is there anyone in the Washington, DC metro area who is good at fixing Alpha 374A's? I'm willing to go as far south as Richmond and as far north as Baltimore. A good friend of mine has a 374A that needs to be looked at. As soon as you hit the SSB switch, the TR relay chatters loud enough to wake the neighbors and the fuse blows. With the CW switch in, the unit will come on but the meter lights will switch to the transmit color after 3 or 4 minutes. We found a burned resistor and two diodes that seem to be allowing current to flow both ways on the power supply board. If you know what the problem is or have any suggestions as to how to fix it please pass them along. Otherwise, the name of someone who is good at fixing amps would be greatly appreciated.
Thanks,
Mike

Since you obviously have not seen one of them I will describe it to you.
Take a piece of PCB and put all the traces on it for the switches including
the little cross pieces where the switch is at. Then a mask is glued to the
board. At each switch position there is a small copper bubble. The front key
mashes this bubble onto the contacts.

I don't see many ways to clean this but I'm open for ideas.

You certainly can. Fancy (and expensive) antennas aren't very good and don't have any secrets in them, regardless of advertising hype.

A good antenna has to be large and installed in a clear, high place. No shortcuts work.

Clean with rubbing alcohol and a soft *lint free* cloth. Do not rub real hard on the surfaces that make the contact, and do not touch with bare hands after cleaning as this will transfer oils and foreign material to the contact surfaces. This is a one-time only fix, as these sort of keypads will not survive a second cleaning. If you are careful when you perform this cleaning, your radio will last for years before this happens again.
If there is actual wear damage to the contact surfaces or if the pad is just ready to fall apart, you are essentially out of luck. I do know of a company that is capable of making these keypads, but unless you can get a bunch of other hams with the same problem to go in with you on a purchase of a bunch of these, it's going to cost you a mint because of the one-time setup/tooling charges.

615. Cheap White LED's....

Newsgroup: rec.radio.amateur.equipment
Date: 2002-01-13 19:30:26 UTC
From: keithburns88@hotmail.com
Message-ID: <76945278.0201131130.39756073@posting.google.com>
Source record: 49020

While looking through the usual sources of components (Maplin , RS, Farnell) I stumbled across a site that's selling White LED's that are rated 6,800 - 9,500mcd (that's about the brightest ones that I've heard of). They are the 20 degree viewing angle ones and are rated at 20mA for full output. I bought six for experimenting with and was very impressed.

They claim to be selling budget priced solar stuff and white LED's, (don't quite see the connection there but who knows).

Source record: 49026

The terminals marked "LINE" connect to your phone line. These are capacitively coupled to the hybrid transformer, so your phone needs to remain "off hook" during the phone call. Alternatively, you can put a 900 ohm resistor across these terminals and use some sort of switching arrangement to connect your phone line to the phone or the HD15.

The terminals marked "GND" and "RCVR" connect to the external speaker jack on your radio. You can connect an external speaker between "GND" and "SPKR" so you can still hear things when not using the HD15.

The two RCA jacks are a high impedance and low impedance microphone signal that you need to connect to the mike input of your rig. Note that the high-Z signal is controlled by the ON/OFF switch on the HD15; the low-Z signal is always live.

The HD15 manual pretty much explains all of this and it includes a schematic. If you don't have the manual, let us know and I'll copy and mail you the important pages.

Illinois has such a form and includes it with their state tax forms
every year. As if any one actually uses it. It's been around for 50
years or so, and Illinois sales tax is much higher than the surrounding
states, to boot. Yeah, I know, we voted for Freaking Al "I'm not made
of Wood" Gore. Between that and the fact that Democrat/Republicans are
getting harder to tell apart here, I'm ashamed to say I'm from
Illinois.

I call him a lot worse than that. At one point, we had two Democratic senators, both national embarrassments.

Worse yet, I lived in Arkansas (hence the 5) when I got my original ticket, and lived through most of Bill's terms as governor. I was born, oddly enough, in Chicago. I started referring to Washington D C as the Old Arkansas Governor's Retirement Home. Three of the 6 Governors of Arkansas up until that time from my birth retired to Washington. We had two ex-governor Senators: Dale Bumpers and David Pryor. Then Bill becomes President. Oh, no, wait a second, he became Co-President with Hillary.

Hello All;

Just purchased an Icom 746, and I think the radio may have a problem. It doesn't seem to pick up anything on most of the bands, and on 40 and 20 meters it only picks up a few signals, and only with the preamps on. It barely even picks up WWV. I have a good antenna, and have tried the rig on other antennas with similar results. Any advice or suggestions, particularly from people who own this rig?

Thanks.

Ahh, bureaucracy. The program that read the form probably was written
so that you had to send in at least a penny, eh?

thanks for the advice. I checked the data and it seemed recent enough, less than a month. I tried "generic" coordinates, i.e., 43 degrees instead of 43.xxx and managed to get comparisons within 1.5 minutes. I was able to make an attempt at Uo-14 pass with the tracking and was successful.

I will check the data and see if maybe I can find updated versions.

637. What is wrong with my FT757 ??

Newsgroup: rec.radio.amateur.equipment
Date: 2002-01-14 09:51:45 UTC
From: hamlbbb@yahoo.com
Message-ID: <cd2622dd.0201140151.6748e667@posting.google.com>

I have a YAESU FT757 GII that I haven't used for about 1 year, during the weekend I reconnected my transceiver but there seems to be a problem :
When I plug in the 3-conductor jack from my manual CW-key (that I have used for years on this RIG) on the back side of the transceiver I immediately get the CW sidetone, when I press the VOX button I sent out a CW carrier.
I first thought there was a problem with the wiring to the key, causing a permanent close of the key, but I measured it and it is completely normal. I get the same result with a non-connected 3-conductor plug !

What could be wrong ? I'm out of the electronic stuff since years so any help would be appreciated , I'd like to get back on the air in CW mode.

Thanks !

I think this radio has a master reset function. Don't remember
how to do it but if you have manual the details will be there.

Just a guess.

I use Ebay, but I am sure to check prices. If the item is one that is still
sold by the company, it's easier to find a price, but if it's old and not being
sold anymore, there are resources to find out what the approximate going rate
is for something. Paying more for the VX-5R is just poor bidding practice...

gil <gilpi@mindspring.com> wrote:

: Will be in the market for an entry level transceiver in the near future and
: would like comments on these two rigs, I know they're about the same price,
: but are they the same in performance (rx and tx) ??

I was having the same dilemma a while ago and finally went for the Icom,
mostly based on the reviews at http://www.eham.net and have not regretted
my decision, although I cannot do a direct comparison to the Yaesu since I
have no personal experience of it.

At eham.net, the IC-718 currently has an average score of 5.0, the FT-840
4.5. Both have tens of reviews, reading them probably gives you a good
idea of the pros and cons of the rigs.

BTW, according to the Icom website (http://www.icomamerica.com) you get a
free UT-106 DSP unit when you buy a new IC-718 (only valid within the
United States, though) until the end of March.

Check the reviews here:

IC-718 at eham.net: http://www.eham.net/reviews/detail/947
FT-840 at eham.net: http://www.eham.net/reviews/detail/129

: Thanks in advance for the help

Hope this helps.

That may be the thinking. When I had a little hot sauce business, if I did not send the state of Texas sales tax proceeds, they would automatically bill me for $250. Even after I went out of business. While "W" was up in Austin supposedly lowering taxes, the state collectors were going a bit balmy. I finally convinced them I was out of business, but had to pay $50 in penalty fees for... what... not paying taxes I didn't owe? Oh, well...

the IL Dept of Employment Security (unemployment folks) were pretty useless
too.

my first quarter in business back in 82, I sent them my first quarter
'contribution', not realizing that the accountant had already sent it.

for 3 years, they tried to get me to pay my overpayment
again.................

647. Antenna Matching Advice Needed (Homebrew Mobile Tuner)

Newsgroup: rec.radio.amateur.equipment
Date: 2002-01-14 14:46:41 UTC
From: littlejohn42@mailcity.com
Message-ID: <97169496.0201140646.10bab690@posting.google.com>

In my mobile I am currently running a 102" whip antenna on 10m which works fine. However, I would like to be able to use it on 12m as well. What I would like to do is to homebrew a fixed L/C tuner (pre-tuned for the middle of the 12m band) that I can just switch in when I want to work 12m, and out when I want to work 10m with no knobs to fiddle with. It also needs to handle around 400 watts. I would like to wind my own inductor etc. for it so I would need the coil dimensions, value of C, a schematic to see how this would all go together would also be extremely helpful (this is my first project of this sort). Any assistance anyone can offer is greatly appreciated.

This is pretty much a nobrainer assuming you have an antenna analyzer
like the MFJ259. All you need is one series coil (no capacitor) between
the center wire of the coax and the whip feedpoint. Wind the coil and
test with the analyzer. If the resonant frequency is too low, take turns
off the coil and if the resonant frequency is too high, put turns on the
coil. About 4-5 turns on a two inch diameter coil form should do it.

John,

All you may need is a base loading coil for the 12 meter band which should
give you a good enough match to 50 ohm coax.

Download program BOTLOAD from website below in a few seconds.

Program will tell you coil inductance, number of turns of what wire
diameter, to wind on your choice of size and shape of coil former.

If you want an even better match, download program ENDFEED which will tell
you values of coil and capacitor for an L-match. Or a T-match.

To design coils for a given inductance download program SOLNOID2.

Bob, could the connections that you mention going to the mic instead
go to one of the auxillary inputs on the back of the radio so they can
just stay connected? Without the switching arrangement you mention
would I simply unplug the HD15 from the phone line when not in use?

658. Newbie SWR meter question

Newsgroup: rec.radio.amateur.equipment
Date: 2002-01-14 18:30:25 UTC
From: cprstn54zz@att.net
Message-ID: <3c43200d.22119546@news-server.optonline.net>
Source record: 48964

I can't get meaninglful SWR readings on an [eBay] Micronta SWR/power meter (21-525) attached to an FT990. The meter works fine as a power meter.

After the radio tunes the antenna (always to SWR 1.0 on the radio's SWR meter), I get no non-"1.0" readings on the Micronta meter -- not even to calibrate the meter on "Fwd." If I don't use the radio's ATU, I get "High SWR" on the radio, and no power is sent to the feed line.

How can I find out just how bad my antenna and feed line are?

On some frequencies, the Micronta meter seems to work and shows very high SWR (way, way over 3.0 -- into the red), without the radio showing "High SWR." When I then use the radio's ATU (which hums away for up to 10 seconds), the radio's meter shows SWR=1.0 after the tuning. But the radio's ATU is only supposed to adjust for an SWR of up to 3.0.

Is something broken? Or am I doing something wrong? The Micronta meter looks unabused and quite like new.

Jusy clip a 'stinger' -- a couple feet of stiff wire onto
the end of the
hustler whip and trim it down to resonance.

Just a guess, and I'm sure to be corrected if I'm wrong, but that meter is most likely geared towards the 11 meter (CB) band, and may not function real well outside of those frequencies.

To reset this radio, turn it off, press in the "marker" and
the "linear" buttons on the back, then turn it back on.
Don't forget to "undo" the buttons...

That may well be. The instructions talk about "your CB radio" but the
specs say 3-30 MHz.

You are doing something wrong. When your radio and internal tuner "tune"
the antenna inside the radio, you can indeed match the output of the radio
to the VSWR of the line and get 1:1 VSWR **at the input of the tuner, inside
the radio**.

The Micronta, on the other hand, is connected directly between the radio and
the antenna/feedline and is reading the VSWR of the antenna/feedline withOUT
any antenna tuner. Whether or not you have a high VSWR on the antenna has
nothing to do with how the internal tuner in your radio is handling things.
Both meters are correct; the Micronta is reading actual vswr and the radio
is reading vswr as tuned with the radio's tuner.

Source record: 48975

Possibly. It depends on the signal level required at the aux jack.
Originally, the HD15 was meant to work with Heath's line of radios, and they all had a phone patch input on the back that went to the same circuit location as the mike jack. Most people today would build some sort of switch box that could also switch the stock mike in and out of the circuit as needed.

Yes, you can disconnect the HD15 from the phone line any way you want. But most users will forget it once in a while, thereby tying up their phone line for several hours or more. Also, you might not be able to dial the required number with the phone patch on the line, so it really wants to be turned off or disconnected when not in use.

I copied the latter half of the HD15 manual today. It'll go out in tomorrow's mail. You should have it in a few days.

>You are doing something wrong.

That is the correct answer!

I just pulled the directions for the later model (21-533) meter off
the Radio Shack website. There, RS adds the requirement (missing in
the directions for the 21-525) that "AM" must be selected for SWR
measurement. That's why the meter worked on some bands: the FT990
was setting the emission type to AM for some bands automatically. For
the others where it used SSB I was getting nada. I guess so many
people already knew you had to use AM that Radio Shack didn't bother
to put it in my instructions.

Now I get consistent off-the-scale [bad] readings for my dubious
Cliffdweller II. As soon as it warms up a bit, I will install my new
DX-CC inverted-V dipole.

Thanks to all for the help.

What is your antenna? What is your feedline? How far outside your antenna's
resonant frequency are you trying to tune?

Other than that, I'd hurl the Micronta into the trash and trust the Yaesu meter.
But then, you don't say what the hell you're trying to tune. Which band(s)
you're working, and what the hell frequency your antenna is resonant on.

Its not really a matter of having to use AM. Any SWR meter requires that you output a steady power in order to operate the meter. AM puts out a constant carrier. SSB puts out next to nothing unless you are speaking into the mike so there is no forward power, no reflected power and no power to operate the meter. You can use CW with the key locked down or the tune position if the rig has one - anthing that causes the rig to put out RF power.

The rig's built-in tuner probably forces the rig into a tune condition while the tuning adjustments are being made.

(Rant: Don't they ask questions about the various emissions types (A3, A3J,
etc) on the ham tests anymore? Or do they just hand 'em out?)

SSB mode is taken to mean "Single Sideband Suppressed Carrier". That means
that there's no carrier (roughly translated "blank signal") present. Unless
some audio is going into the microphone, there will be no RF coming out. You
can't measure the SWR (with an SWR meter) unless the radio is outputting
some RF.

Either switch to AM, or use CW and hold the key down while tuning up. If
your radio has an RF output level knob, turn it all the way down before
tuning up so you disturb as few people as possible.

: SSB mode is taken to mean "Single Sideband Suppressed Carrier". That
means
: that there's no carrier (roughly translated "blank signal") present.
Unless
: some audio is going into the microphone, there will be no RF coming out.
You
: can't measure the SWR (with an SWR meter) unless the radio is outputting
: some RF.
:
: Either switch to AM, or use CW and hold the key down while tuning up. If
: your radio has an RF output level knob, turn it all the way down before
: tuning up so you disturb as few people as possible.

Do you have an amateur call? Curious.

But, other than that, meters that measure transmitter output can measure a continuous wave signal (AM, FM, CW), that is, a continuous, solid signal; or an intermittant signal such as SSB. If the meter is set to measure a continuous signal such as AM, and you're transmitting in SSB, you'll get an abnormally low reading. On most ham rigs, you can measure either a continuous signal, or take the peak reading on an intermittant signal.

wrote:
>(Rant: Don't they ask questions about the various emissions types (A3, A3J,
>etc) on the ham tests anymore? Or do they just hand 'em out?)

Maybe if they asked meaningful questions that required some real
knowledge -- instead of memorization of band specs and the height of
the the E layer at 3:00 pm on a sunny day -- beginners would know
more. You should take a look at what the recommended instructional
texts cover and what the question pool looks like. You can pass the
General test and not know how to compute the resistance of three
resistors in parallel.

In any event, the internals of how an SWR meter works is not on any of
the tests through General.

Lastly, I can see why CW with the key down and FM would require
substantial power at all times. Why does AM? Isn't the output wave
modulated to zero amplitude (and zero power) when there is no mic
input?

Just to clarify: The Radio Shack meter is *not* a peak reading meter therefore it cannot accurately measure the forward or reflected power or SWR of a SSB signal. Even if you have a peak reading meter you must be talking into the mike in order to read anything in SSB mode. From the report of seeing no reading in SSB, I assume that he was not speaking into the mike while trying to take the measurements. That means there was nearly zero RF output from the transmitter.

Please contact me via email: robfult@carolina.rr.com

Selling a Hustler 5-BTV Vertical (80-10m) in the box w/ hardware and instructions. I got this from AES with the assumption that it would work well in the attic horizontally. After assembling, it didn't fit well so I moved to Isotron antennas. This is a BRAND NEW antenna -- receipt will be included from AES, purchased 12/31/01. Paid 149.99 -- will let it go for 110.00 OBO.

I also considered a B&W AS-40 which is a 40-10m trapped Dipole Antenna. Paid 154.99 -- will also let it go for 110.00 OBO. The wires have been cut and permanently attached to ONE SIDE ONLY. Wires are cut with AT LEAST 12 inches of "play" for tuning. I attached one of the sides as instructed and decided to go the Isotron route after evaluating the size of the attic.

Both antennas are brand new with receipts -- never transmitted. Original packing, receipt, instructions, hardware, etc is included. Thx!

Lesson learned :)...

thx.

No, during 100% modulation an AM signal varies from zero to twice the carrier level. During periods of no modulation the output will be at the carrier level. In other words, a 100 watt AM transmitter will output 100 watts of pure carrier as soon as you key it - with no modulation.

Sure, but as strange as it seems to those of us who have to watch our pennies from time to time, there are many folks who have always had plenty of $$$ and they neither comprehend nor care about prices. Money means little to folks who grew up on big allowances and graduated into hi-$ jobs. Ebay? Look at the prices asked right here on reeky.r.a.c ;o)

You complicate the project considerably by your requirement to switch the netork in and out without leaving the drivers seat (if I understand correctly). For base station use a homemade trap would serve this purpose well, but would be unwieldy on a mobile whip.
You can use a ten meter Pro Am whip and change to a longer "stinger" for 12 meters. Or use a 12 meter whip and change to a shorter stinger for 10. You can use some older CB antennas and rewind them to use on the higher HF ham bands. I once did this for 17 meters and worked all over the world with an Icom 735 running 50 watts mobile.

699. First shack ground question

Newsgroup: rec.radio.amateur.equipment
Date: 2002-01-15 15:14:14 UTC
From: cprstn54zz@att.net
Message-ID: <3c444564.58096031@news-server.optonline.net>
Source record: 48854

I would like to put my shack on the third floor of a platform-frame house, roughly 26 ft. above ground. The nearest convenient access point for the copper water supply is 30 ft. away and the supply is already used for the house electrical ground.

I have read that if I use as a ground a braided copper strap from my shack down 26 ft. to a ground rod it will not be a good ground because it will act as an antenna, inducing more stray current than it would bleed off.

Instead of the copper braid, could I use as a ground wire the center conductor of a coax cable? If so, should I connect the sheath to the house ground?

Just my opinion, and it has come from some Techs much smarter than I and some
anecdotal evidence on previous owners of the FT-847.

The 847 has a very thin circuit board. The solder joints are subject to failure
from heating and cooling and often the rigs have needed much ongoing repair.

Very similar to the 8000-R and 8100-R. The circuit boards in these rigs are poorly designed and many have had problems. Others have not, but there is enough anecdotal evidence to suggest that the rig is certainly not one of Yaesu's
best designs.

VINTAGE METERS

Old Hallicrafters-style (like is on the SX-28) illuminated
milliammeters. Have internal pilot light installed in rear to
illuminate translucent scale with reddish-orange glow.

3" x 3" square bakelite case. Requires 2-3/4" panel hole.

All have lugs and 5000mfd mica bypass. As removed from a late
1930's or early 1940's 1KW AM/CW HF transmitter. Some could use
cleaning. Zero-set screws work. Movements free when rocked.
Deflection when tested using ohmmeter. Digital pictures
available. All are mfd by Triplett.

Model: Range: Price: Remarks:

321A 0-500madc $10.00 Missing pilot light fixture and
minor crack in face.
327A 0-150madc $15.00
321A 0-150madc $15.00
327A 0-300madc $15.00
327A 0-75 madc $15.00
0-200madc $ 8.00 Can't get apart, missing the
pilot light socket.

Walter Treftz (N4GL) --- penguino@atlantic.net ---

I recently bought a slant face programmable Regency XL2000. I bought it and intend to use it since I am a member of a local Search and rescue unit and need to put our frquency as well as a few others we use it it. I know where the jumper is and how to use it but I need the specifics as far as how to program it. Email me if you would rather not leave a post or check out the pages I built for the unit at:
http://members.aol.com/greenecountysar

I hope someone gives me some help soon.

Thanks much!

I cross posted the below information on the comp.sys.tandy news group and the computers were quickly spoken for. Many Radio Shaft (Shack), Tandy and vintage TRS-80 computers users frequent the news group. I'm an original trs-80 model one/three fan myself. Some of us can never seem to get it out of our blood. Hope to see some of you over there when you can make it.

Hello Fan,

Thanks for the info. You don't know how happy it makes me to know that something I designed gives someone else pleasure. No, it's not a Kiwa loop, but it's 10 times smaller and 5 times easier to tune, hooks up to any radio, Oh and it has my name on it :)

Someone else posted that they think I designed the antenna. Well, yes. The patent is in my name, the antenna was completely designed by me, just manufactured overseas where they do a much better job than me.

Thanks for the post and Best Regards,

Chris Justice
Research and Development Engineer

CCRadio
CCRadio Plus
CCrane Stereo FM Transmitter (Wireless Audio Transfer Device)
VersaCorder
ATS909 software programming
Justice AM Antenna
Freeplay Plus radio
White LED advanced Biasing circuitry
FCD (fused capacitive discharge) lightening protection.

and many more to come.....

Chris,

Can you tell me/us more about the ATS-909 software programming? I know
there has been some discussion in some areas about hooking up the '909 to a
computer.....?

Thanks,

Adam

Well, I guess I will have to work as a human FAQ until we get one on the website.

You are experiencing RF feedback from the ferrite loop inside of the CCRadio. The signal is going into the CCRadio antenna jacks, around the windings on the ferrite loop antenna, radiating a signal which is fed back into the kiwa. Voila, you have a great regeneration device.

To help you solve that problem, I can offer to upgrade your radio for free to the same antenna jack as on the CCRadioPlus. I designed the new antenna jack so it is Broadcast Band Pass filtered, shunt protected and the RF is delivered directly into the AM RF Front End much like other higher dollar receivers on the market. With this type of input, it does not cause any feedback to the receiving antenna and will actually keep the shortwave overload from occurring as in the original CCRadio. Just email me and I will perform this modification for you.

The Justice AM Antenna is not what it appears to be. You can look back at other posts that I have made but I will summarize it for you.

It is a new way to utilize the magnetic response of a ferrite to increase the overall gain of the ferrite and decrease the tuned bandwidth. Gain is better and bandwidth is narrow to reduce interference from adjacent stations.

The amplifier is a very clean dual JFET push-pull with a buffer stage to decrease the impedance to approx. 33ohms output/input to your receiver. Signal strength increases, bandwidth decreases, directional characteristics improve and the unit is self contained. There is a precision rail to rail operational amplifier and a voltage reference to keep the tuning stable, even when running on the adapter or with a dying 9 volt battery. Current consumption is 11mA max.

If you have any other questions, please post them here, email me or send a smoke signal. (My wife is indian, she can translate)

Take care and Best Regards,

Chris Justice
Research and Development Engineer

Someone out there is going to laugh at me, but at my age, I don't care. If you have a 10mtr whip already, is it not possible to get one of the old telescoping whips for a CB portable, lash it to the top of the whip and then extend it when you want to operate at 12mtrs? I know this sounds like real "amateur radio", but what the heck, that's the way the hobby goes. :-)

BTW, for the purest, let's not worry about a return loss of 10 db versus 14 at the desired freq. Let's get on the air! Keep that Poynting vector pointing in the right direction. E X H, rah, rah, rah! :-)

You can send it to the address on their web page,
and for $35 they will give it a good tuneup and/or
evaluation. Just be prepared for them to have it
for a couple of months. :-(

Did you check the key? Is it locked down? Does it have a tune-up lever
that is closed?

Have you opened the plug and checked it out for shorts? If you are using
stranded hook-up wire, one tiny strand is enough to cause a short.

Why are you using a 3-conductor plug on a straight key? Try a two
conductor plug.

Try inserting a 3-conductor and a 2-conductor plug with nothing connected to
them -- just plugs -- and see what happens.

HI Bill, Dont know about the page but I do know about the mics to use...
Probably the best buy right now for an Icom base station is the Heil HM-I...made specifically for the icoms, as they use a condensor type mic...with the options available on the rig, you can make the 756 sound great...you can with manyother mics as well, but a preamp is required...Heil makes one but the best all around and most simple is the W2IHY equalizer/gate...you can really do some tailoring with it and most any standard low impedence or Icom Mic...The SM6 and SM8 are easily made to sound good on the 756 as well...but its fun to have that 8 band graphic etc. with the W2IHY...Then you can use anything...I see Terry has one for sale and a gold line also here on the news group....for the money a fairly exotic mic setup that doesnt require an audio engineering degree....You can even make your Icom hand mic sound pretty darn good with it...73 Murray K5MDM
BEST AND MOST SAFE HF DEALS!!

The 746 does not have color nor realtime scope, but if you are a "one radio" for all bands guy...there wont be anything else like it!! I love my PRO, and dont think it will replace it but I surely do want to try one!!! 73 Murray K5MDM

Why do you need the ground? It doesn't matter what wire you use, a long ground wire can cause problems when it's snaked though a house. You want use an antenna that properly decouples the feedline from the antenna. IE: use of a baluns,etc on dipoles, or decoupling sections on verticals. Trying to bleed off currents to ground is the wrong way to go about it. If you have rf in the shack, you have an antenna or feedline problem, not ground. The only thing you need a ground for is shock protection in the shack. For that purpose just use the third grounding pin on the electrical boxes. In your case, I would ground the gear if needed to the electrical boxes, and I would use no other external ground. Any grounding for lightning protection must be outside at the antenna/mast. I'm on the ground floor next to a window, and I don't use an external ground. I don't need it or want it. The gear itself is grounded to the power line ground. I don't need any more grounding than that inside the shack. MK

> I'd sure like to know when Kenwood is coming out with a replacment for
> their rather dated TS-50.

Cant really complain about Kenwood. I have a TH-79A which I still use.
Its about 7 years old and still has features comparable to the VX-5.
Its a real dualbander with dual inband RX works as a repeater and as
full Duplex phone.
Had a TS-50 even before that so its probably a bit dated now. However
it was the first of the high power micro-size HF rigs.
Every one else just seems to be rehashing old models. Kenwood would do
good to make a new multiband model to replace the TS-50.
Now running an FT-817.
I was just wondering if there was any perliminary news out prior to
Dayton as its a bit boring here at the moment. The importers aren't
actually distributing the F6A here they dont think there is a market.
The VX-5 out sells most stuff here in SE Asia 5 to one (if not more)
Its even out in a new silver model.

Cheers to every one.
Eric.

Hi Folks,
ICOM's IC-706 has cross band repeat capability. What bands are included in cross band? For example, does it cross 70cm <=> 160m or is this strictly limited to VHF/UHF bands? I realize that certain restrictions exist for repeating HF signals, I just became curious when I was flipping through QST and thought I'd ask.

I'm in need of a schematic diagram for an ICOM IC-2340
dual band transceiver. The 2 m squelch doesn't want to open
when the radio is warm. Please reply direct to my email at
jvaldes@whoi.edu.

Thanks !

Jim, WA1GPO

Hello, I bought a new CAT700 controller a few months ago and never hooked it to a repeater. It has the optional DVR digital voice recorder. It has the Windows software programmer option. It is in the optional rack mount housing. It is like new! Paid $780. Will take $550. You can see it at their website:http://www.catauto.com/cat700.html
Thanks, Bob

N9NWO, you need to tell that too Billy Turzan from the state of LA. He heads up the communications committee in the U. S. Congress and pushed the cellular ban in the scanner industry. Wonder how much he was paid by the cellular industry for his push and vote? I do agree with you.

Hummm, I don't think it really is out of the box. I haven't noticed it
mentioned in the manual anyway. I do think it may be possible to mod
or tell it to do so, but I don't know if this is true, or how well it
works. There may be a "hidden" startup config that will tell it to do
it??? That's how my ft-470 HT can cross repeat. On it, I think you
turn it off, hold the rpt key and turn it back on. Normally most cross
repeat 2m-70cm. I'm not sure what bands are legal. I do know many use
the HT to HF shack setups, but I think they stay on 70cm usually as
far as the link to the HF rig. MK

Hi to the list,
Just picked up a broken HW-101. It is in dire need of the transformer, T-202 on the bandpass board. Someone has cut the cabinet, installed a hinged door on top. I also can use a cabinet.
Second question: Where can I find the rubber drive bands to replace the rotted things hanging on this one?
Thanks for reading, and please reply to me direct.

The Cellular Telecommunications Industry Association is
one of Billy Tauzin's greatest campaign contributors.
Their concern is to give the cellular user the illusion of privacy.
Yup, we've got the best democracy that money can buy.

But who are they? The cellular service suppliers?
Who makes up CTIA?

And what this does show is that there are too few hams
in comparison to gun owners. Guess which group has
more influence in congress? And look at how the AARP
is so powerful yet it is just a bunch of old farts paying $25
each. Shows that even the little guys can have influence
if they band together.

790. FS: SMA-to-BNC custom fit antenna adapters

Newsgroup: rec.radio.amateur.equipment
Date: 2002-01-18 14:03:13 UTC
From: gulyas@earthlink.net
Message-ID: <12235960.0201180603.593eddcb@posting.google.com>
Source record: 48946
Cross-posted to: rec.radio.amateur.antenna,rec.radio.amateur.equipment,rec.radio.swap,rec.radio.scanner

If you have a need for a high-quality SMA-to-BNC antenna adapter that is
custom made to fit and protect your H.T. or scanner radio, I have the part.

Adapter allows you to:
Quickly change antennas to base,mobile or different style use.
Use the more popular and wider selection available of BNC antennas.
Prevent chassis connector wear or from coming loose due to antenna
changes.

Adapter features:
Gold plated contacts with a teflon insulator.
A low profile design with a rubber covering for a factory antenna look.
The rubber base seals to the top of the radio with no spacers needed
for moisture and dirt protection.
The base also provides an excellent support for any length of antenna
or application.
No need to remove adapter once installed to make a quick and safe
antenna change.

Sizes to fit radio models:
Yaesu: VX-5, VX-1, FT-50-R, VX-10, VX-150, VX-110, VXA-100, VXA-120
Icom: IC-T8A, IC-T81A, IC-Q7A, IC-R2
Kenwood: TH-D7, TH-G71, TH-F6A
Alinco: DJ-V5
Standard: C508A, C510A
Radio Shack: HTX-200, HTX-400, HTX-245
Aor: AR-16

Previewed in the May 2000 Issue of CQ Magazine, and the Nov. 2000
Issue of QST Magazine.

$11.95 + $1.50 S+H(One to unlimited)
(Check or money order only in U.S.Funds)
(Specify-radio-model)

Hi Mike,

I'm also looking for some HW-101 parts, in case you locate a
whole parts rig, or someone parting one out. I need the top
cover for the PA cage, and the "fingers" that are attached to
coil compartment shield cover on the bottom of the rig.

Someone emailed me the other day and is selling me a CW filter
for $10.00, shipped! Too cool.

You can get drive belts at auto parts or hardware stores.
Use neoprene O-rings. You need 2-3/16" diameter, but make
sure to get new ones that are at least the same thickness
as the old ones. The skinny ones that I found at Lowe's and
Home Depot are too thin and don't work at all.

In lieu of rubber belts, a lot of guys have installed dial
cord. It's a lot of work, but a lot more dependable.

73,
Dean, K5DH

792. Wanted: vertical for 10 meters

Newsgroup: rec.radio.amateur.equipment
Date: 2002-01-18 14:09:26 UTC
From: k5dh@raytheon.com
Message-ID: <q0W18.11$Bd4.245@dfw-service2.ext.raytheon.com>
Source record: 48947
Cross-posted to: rec.radio.swap,rec.radio.amateur.equipment,rec.radio.amateur.antennas

I'm looking for a 10 meter vertical, something like a Cushcraft Ringo or Shakespeare Big Stick CB antenna. I need one that has no horizontal radials. I know about the Antron 99, but I don't want to spend that much. Anybody have one for sale cheap? If you're in the North Texas area, I'll come pick it up.

73,
Dean, K5DH

793. WorldPouch for FT-817?

Newsgroup: rec.radio.amateur.equipment
Date: 2002-01-18 15:10:54 UTC
From: Dan McKenzie <dan.mckenzie@centurytel.com>
Message-ID: <3C483AFE.384C1629@centurytel.com>
Source record: 48799

Has anyone used the "WorldPouch" for the FT-817? I'm considering
getting a nice pouch or pack for the rig and have it narrowed
down to either the Worldpouch or Expedition pack from Communication
Outfitters. I'm especially interested in how an MP-1 antenna
would fit in the WorldPouch. Also how is it for operating
on a table top or car seat. Can you get the various cables out
the back of the thing?

Dan, W9FCC

Myself and another Ham purchased two supposedly working PRC-70 radios
from a Mike Linger at this email address. Both radios were burned up and

could never have worked as stated. After Mr. Linger agreed to pay for
half the repair (over $360) it took nearly a year to get only $50 from
him. I have a long record of correspondence if anyone has any questions.

I would also like to hear from other Hams who have had similar problems
with Mr. Linger. Buyer beware!
Also, Mr. Linger forgot to mention that the serial numbers were ground
off each radio....

Hey Guys,

Upon looking at E-Bay last night, seen a few on there. Whole and for parts. They were/are nice rigs. I had one. Sold it to my brother when I got a TS 440.
After looking at them last night, was half tempted to ask my brother to sell his back to me, or bid on one of those on E-Bay. I worked more of the world on the 101 than I did on the TS 440. Loved that rig.....

Just thought I would try to help you guys out a bit.

AMATEUR RADIO NEWSLINE(tm) REPORT #1275 - January 18 2002

Amateur Radio Newsline report number 1275 with a release date of
Friday, January 18th 2002 to follow in 5-4-3-2-1.

The following is a Q-S-T. A new ham antenna on the I-S-S and a new microwave record down-under are first on Amateur Radio Newsline report number 1275 coming your way right now!

(Billboard Cart Here)

**

HAM RADIO IN SPACE: NEW ANTENNAS INSTALLED ON THE ISS

An American astronaut and a Russian cosmonaut ventured into space on Monday January 14th to move a construction crane and install a new set of ham radio antennas on the International Space Station. Roy Neal, K6DUE, has the details.

--

THERE IT WAS, ON NASA TELEVISION, TWO WHITE SPACE SUITED CHARACTERS, DWARFED BY THE IMMENSITY OF THE INTERNATIONAL SPACE STATION. FOR THE 32ND TIME ASTRONAUTS AND COSMONAUTS WERE OUTSIDE THE HUGE SPACECRAFT TO ASSEMBLE HARDWARE.

THEIR PRIMARY OBJECTIVE WAS TO MOVE A BIG CARGO CRANE FROM ITS TEMPORARY BERTH ON THE UNITED STATES SIDE OF THE ORBITING OUTPOST TO A PERMANENT LOCATION OUTSIDE THE DOCKING COMPARTMENT OF THE RUSSIAN CONTROL MODULE.

THAT ACCOMPLISHED, THEY WENT ON TO UNFURL A HAM RADIO ANTENNA. ASTRONAUT CARL WALTZ, KC5TIE AND COSMONAUT YURI ONUFRIENKO, RK3DUO, DEPLOYED THE RIBBON OF TAPE THAT SOON WILL BE IN USE ON A HAM RADIO STATION IN THE SERVICE MODULE,. WHERE THE CREWS LIVE AND SLEEP. A SECOND STATION HAS BEEN IN SERVICE FOR SOME TIME INSIDE THE SO CALLED FUNCTIONAL CARGO BLOCK, ANOTHER SECTION OF THE I S S.

FRANK BAUER, KA3HDO, THE CHAIRMAN OF ARISS, THE GROUP THAT IS RESPONSIBLE FOR AMATEUR RADIO ON THE SPACE STATION, CONGRATULATED THE INTERNATIONAL TEAM OF LICENSED HAMS FOR THE SUCCESSFUL CONCLUSION TO MONTHS OF HARD WORK.

ON JANUARY 25th ONUFRIENKO IS SCHEDULED TO GO OUTSIDE AGAIN, WITH FLIGHT ENGINEER DAN BURSCH, KD5PNU, TO INSTALL 3 MORE HAM RADIO ANTENNAS OUTSIDE THE MODULE THEY CALL ZVEZDA, THE CREW COMPARTMENT THAT'S THE SIZE OF A PASSENGER BUS HERE ON EARTH.

HAM RADIO IS GROWING RAPIDLY IN SPACE, ALONG WITH THE INTERNATIONAL STATION ON WHICH IT'S INSTALLED.

FOR THE AMATEUR RADIO NEWSLINE, ROY NEAL, K6DUE

--

The Expedition 4 crew will remain on board the ISS until May. And according to Frank Bauer, KA3HDO, another important task is to bring the automatic packet system back on line. He says that ground technicians are working with the astronauts and cosmonaut on that project and that task will continue as crew time permits. (ARNewsline from information provided by ARISS, NASA.)

**

HAM RADIO RECORDS: 24 GHZ DOWN-UNDER

A new distance record is set on a band where even commercial interests are only now starting to tread. And its a group of Australian hams who have set it. Q-News Graham Kemp, VK4BB, has the details:

--

A new Queensland distance record on 24.048.1 GHz USB was established morning of Tuesday 08 January over a 72.8 Km path. Location 1 was at Wellington Point, with VK3ZQB and VK4ZHL portable. Location 2 was at Caloundra, with VK3XPD and VK5DK portable operating.

Signals strengths up to 5x5 after initial optimization with typical daytime QSB. The visiting team are continuing with local propagation experiments. The challenges of building and operating microwave amateur radio equipment are wonderfully rewarding in many ways!

From Q-News Australia, I’m Graham Kemp, VK4BB, for the Amateur Radio Newsline.

--

Further experimentation is expected to bring even more record setting contacts in this very microwave ham radio band. (Q-News)

**

RESTRUCTURING: BIG LICENSING SUCCESS IN THE UK

A new slow-code license recently introduced in the United Kingdom is also setting records. This in the area of people flocking to get it. Jeramy Boot, G4NJH, days that the new British Foundation License is on its way to becoming a major success:

--

The Radio Licensing Center reports that, as of the 7th of January, exactly 600 of the new M3 Foundation Licenses had been issued.

In the 'QSO Party' for Foundation Licensees that took place on the 1st of January it is estimated that about 100 M3 stations were active. Many joined the one-minute-past-midnight 80-meter net and many more were heard working DX during the subsequent days.

One person active on the 1st of January was Mike Marsden, M3BQH, who also holds the callsign G8BQH. Mike reports that he worked Alex, UR5EDU, in the Ukraine at

two seconds past midnight, using 10 watts on 40 meters. The report was 59+10dB. After a few hours' sleep M3BQH worked 66 stations on the first day, with only two short CQ calls.

"The pile-up queue was never ending, I even managed to work seven other M3s", Mike said.

Jeramy Boot, G4NJH

--

To put this in perspective. The UK has 57,814 hams so 600 is about 1%. Here in the United States we have close to 625,000 licensees. That’s the equivalent of getting 6250 hams signing up for a new license class here in the USA in only a few short days. (GB2RS)

RADIO REGULATIONS: FCC'S APPROVES DRAFT WRC PROPOSALS

The FCC’s Advisory Committee for the year 2003 World Radiocommunications Conference has approved its preliminary draft proposals. The document has been assigned as D-A-02-101 and deals mainly with satellite and terrestrial allocations in the UHF and microwave bands. Amateur Radio is only briefly mentioned in the area of 890 to 1350 MHz allocations.

The Advisory Committee itself was formed in January of 2001 to assist in the development of United States proposals for WRC 2003. DA-02-101 is based primarily on the committee report. Comments on it are due on it no later than January 28th.

The complete of 55 page text of DA-02-101 is on the FCC website at http://hraunfoss.fcc.gov/edocs_public/attachmatch/DA-02-101A1.txt (FCC)

**

ENFORCEMENT: CLEAN UP THE INTERFERENCE - PLEASE

The FCC has written to an A-M radio station and an electric power provider to help resolve an unusual and long-standing interference situation. One affecting local amateurs in the Cincinnati and Mason Ohio areas. Amateur Radio Newsline’s Don Wilbanks, KC5MFA, brings us up to date:

--

The letter suggests that multiple sources may be involved in this interference case. Also that two that are possibilities are Cinergy Corporation and radio station WLW. Cinergy is the electric company to the affected area and WLW is a Clear Channel Communications owned power-house AM station serving the greater Cincinnati area from a transmitter in Mason.

WLW operates on 700 kHz with 50,000 Watts into a single element diamond shaped half-wave vertical tower. This is only one of two such towers left in the United States, the other belonging to WSM AM in Nashville Tennessee. Both were constructed in the early 1930's by the now defunct Blaw Knox Construction Corporation.

One of the amateurs affected is Bob Reiff, WA8ULW, of Mason. Reiff told the ARRL Letter that while the noise is most noticeable on 160 meters, it's showing up elsewhere. He says that some local hams suspect it is even causing problems even on a two meter repeater.

In its letters, the Commission says that it recognizes this to be an unusual case. It says that the source of the interference could turn out to be something else unexpected. But the Commission adds that it is turning to the radio station and electric utility company and asking for their help in finding the source of the noise plaguing the Mason ham community. It's also asking that both cooperate with the technical experts from the American Radio Relay League in solving the problem.

For the Amateur Radio Newsline, I'm Don Wilbanks, KC5MFA.

--

By the way, More information on this very interesting Blaw Knox diamond tower design and the ones installed at both WLW and WSM is available on-line. Simply take your browser to http://www.wsmonline.com/w_homepage/tower/index.html. Its very interesting reading. (FCC, ARRL, Amateur News Weekly)

**

ENFORCEMENT: UNLICENSED OPERATOR TOLD TO EXPLAIN

A former ham that the FCC says may have been on the air without a license has been asked by the agency to provide an explanation. The person posing the questions is FCC chief ham radio rules enforcer Riley Hollingsworth, K4ZDH. And in a recent Rain Enforcement log, Hollingsworth outlined the situation:

--
Hollingsworth: "We requested clarifying information from Brian Bailey, ex-KD5PXQ. His license was set aside by the Wireless Bureau on October 19th. We want to know his exact whereabouts on two specific days in September. Bailey has been in touch with us and is deciding weather to provide the information."
--

According to Hollingsworth, the information that the FCC wants from Bailey relates to allegations of unlicensed operations and malicious interference. (FCC, RAIN)

**

HELPING HAMS: HAMDIHAMS NEW E-MAIL ADDRESS

This note: The Courage HandiHam System has a new electronic mail address. You can now reach the group at handiham@courage.org. You may also contact its Director Pat Tice directly at wa0tda@arrl.net. (HandiHams)

**

CONVENTIONS: HAMVENTION SAYS BRING YOUR BUS AND LAVE THE PARKING SPOT TO US

Free parking at the HARA Arena for Hamvention? Well, kind of. Its free if you leave your car at home and charter a bus to bring in a pretty large group of people to the event. Amateur News Weekly's Phil Thomas, W8RMJ has the not so complex details:

--

For Amateurs who charter a bust to make the annual journey to Hamvention, the Dayton Hamvention Committee will reserve a parking place for your chartered bus for the entire three days of Hamvention. The reserved parking will be close to the HARA Arena Complex, allowing not only a place to secure your valued purchases, but also a place to rest those weary feet after walking many, many miles of Hamvention. Space is limited for the new charter bus parking area. Pre registration is required. Availability is on a first come, first served basis.

--

For more information on the new on-site charter bus parking offer or to reserve a space, please contact the Dayton Hamvention office. It's open normal business hours Eastern Standard Time at are code (937) 276-6930. You can also fax your request toll free at
1-800-491-4267. (Amateur News Weekly)

**

CONFERENCES: SE VHF SOCIETY IN APRIL

Greg Robinson KB4NVD says over the VHF Reflector that the Sixth Annual Southeastern VHF Society Conference will take place April 26th through the 27 Th. in Oak Ridge, Tennessee. The conference, hosted by the Southeastern VHF Society, promises to be an interesting and exciting event with presentations from accomplished VHF and up amateur radio enthusiasts from several parts of the country. Registration, program details, hotel and travel information can be found in cyberspace at www.svhfs.org. (SE VHF Society)

**

HAM RADIO EVENTS: KIDS DAY A BIG MID-WEST SUCCESS

The first Kids Day operating event for 2002 was a rousing success in many venues. But in one Mid-West city a bit of coverage on a local T-V station helped to make it even better. Again to Amateur News Weekly and reporter Jack Parker, W8ISH:

--

Kids Day at the Indianapolis Chapter of the American Red Cross got a boost when event coordinator Stece Wendt, KB9RDS, made an appearance on a local TV news program. During the two minute segment. Wendt told viewers that all kids and their parents were welcome to share in the Amateur Radio experience, including an introduction to Morse Code, VHF repeaters and HF:

--
Wendt: “And then we turn around tand take them over to the big radios -- the big base station radios where they can talk -- literally -- around the world.”
--

This is the second year the local Red Cross chapter has shown young people how to tune in the world.

Reporting from Indianapolis Indians for Amateur News Weekly, This is Jack Parker, W8ISH.

--

This is just one of many Kids Day success stories. We will have more in future Amateur Radio Newsline reports. (Amateur News Weekly)

ARNEWSLINE(tm) FINANCIAL UPDATE WITH N6TCQ

It’s time for a report on the financial situation here at Amateur Radio Newsline. With it is our Support Fund Administrator and Corporate Treasurer, Andy Jarema, N6TCQ:

--

It is January of 2002. A brand new year for ham radio. And the beginning of another year for us here at the Amateur Radio Newsline. And as we start off the new year, here are the current finances.

Looking in the new corporate checkbook, the balance shows us at about $700 give or take a few bucks. Not very much when you consider that it takes over a thousand dollars a month to produce these weekly 20 minute Q-S-T’s.

Obviously, Amateur Radio Newsline is going to need your help -- and -- need it quickly to keep it from going away and to keep the news of ham radio coming your way.

We have done all that is possible from our side to keep costs under control. But, some fixed expenses like the telephone and long distance calling are a must have. So are electronic mail and world wide web access. There is the cost of the routine maintenance on the tape machines and editing gear. And in a few months the Newsline sponsored Young Ham of the Year Award will be rolling our way. All of this adds up and some costs just keep going up. When you add it all up and average it out, it comes to that $1000 a month figure I just mentioned.

So now is the time when Amateur Radio Newsline has to ask to ask that you help to keep its newscasts coming your way. Your tax deductible contributions can be sent to the Newsline Support Fund, Post Office Box 660937, Arcadia California. The Zipcode is 91066.

Ill be back within the next few weeks with an update on how things are going. For now from the Amateur Radio Newsline support center, I'm Andy Jarema, N6-Tiny-California-Quake.

--

Don't worry if you missed the address. It will be repeated in a few minutes at the end of this weeks newscast. (ARNewsline(tm) Support Fund)

**

ARNEWSLINE(tm): WE ARE GOING MP3

One other piece of news concerning Amateur Radio Newsline. As of March 1st, we will be dropping Real Audio and going exclusively MP3. Why the change? Well ever since we began posting a downloadable MP3 file at our own FTP site along side the Real Audio file, 9 out of 10 people have chosen the MP3. And with good reason. MP3 simply sounds a lot better than Real Audio to most of you. And by dropping the Real Audio, we can make the MP3 sound even better by encoding at a higher bit rate.

Right now, you can still compare the two formats if you like. Until February 22nd we will continue to post both Real Audio and MP3. Take the time to download both. And don't worry. Most modern media players including Real Audio, Microsoft Media and Winamp play MP3 so the chances are that you are already equipped to cover of the digital format change. (ARNewsline(tm))

**

SCIENCE AND TECHNOLOGY: THE NOISE OF EARTH

According to Space Daily, researchers have known for three decades that the Earth is a potent radio transmitter, but they were never able to pinpoint where the noise was coming from. Recently, by using data from the four spacecraft of the European Space Agency's Cluster mission, NASA-funded scientists have precisely located the source of the radio noise along the magnetic field lines. The noise originates several thousand miles above bright regions in the Earth's
northern lights. (AMSAT, Space Daily)

**

INTERNATIONAL-CANADA: ARE AGREEMENT IN B.C.

Turning to international news, Radio Amateurs of Canada which sponsors that nation’s Amateur Radio Emergency Service has signed a Letter Of Understanding and the British Columbia Provincial Emergency Radio Communication Service. The letter represents the collaboration between Radio Amateurs of Canada’s British Columbia Section Manager Fred Orsetti VE7IO and Supervisor of Information and Communications Technology for the Provincial Emergency Program Andrew Bryan VE7KSN, to provide a cooperative plan to carry out emergency communication. The letter also further enhances the work of the Canadian ARES program and compliments the Memorandum of Understanding signed May of 1994 between Radio Amateurs of Canada and Red Cross. (RAC)

**

INTERNATIONAL - CANADA: VE1AWA RESIGNS AS MARITIME PROVENCES SM

Due to personal reason Roy MacIntosh, VE1AWA has stepped down from the position of Section Manager for the Maritimes. Tom Caithness, VE1GTC has been appointed acting Section Manager pending outcome of the upcoming election call. (RAC)

**

INTERNATIONAL - UK: AMSAT-UK COLLOQUIUM

The 17th AMSAT-UK Colloquium will be held at Surrey University in Guildford from the 26th to 28th of July this year. AMSAT-UK is now inviting speakers to submit papers about amateur radio space and associated activities for this event and for the Proceedings document. Offers of papers should be submitted as soon as possible and should be sent only to Richard Limebear, G3RWL. His e-mail goes to g3rwl@amsat.org. (AMSAT-UK)

**

HAM RADIO IN SPACE: WEBSITE UPDATE

AMSAT reports that IK8XLD has updated his website with information about satellite operations, EME, the ham radio operation on the International Space Station, ATV and homebrew equipment. You can visit Rocco’s website at www.qsl.net/ik8xld. (ANS)

**

DX

In DX, DJ4KW and DK9GG are active from Belize as V31YN and V31GW respectively until about the 2nd of February. Activity is on CW, RTTY and PSK 31. (GB2RS)

And KE1F will be active on 10 to 160 meters CW, SSB and perhaps RTTY as ZF2LM from Grand Cayman Island from the 14th to 30th of January. (GB2RS)

Also R1ANF began operations as CE9 slash R1ANF on the 29th of December from a Chilean base in the South Shetland Islands. He is active on 10 to 28 MHz with 100 watts to an R6000 vertical. For all three, QSL as directed on the air. (OPDX)

Last but by no means least, word that JX7DFA, is on a job assignment to Jan Mayen. He is operating as LA7DFA. QSL via his home call. He will reply when he returns home in the Spring. (Modern DX)

**

THAT FINAL ITEM: A CALL FOR ARDF HUNTERS FOR THE WORLD GAMES

And finally this week, 2002 may be the biggest year yet for fans of hidden transmitter hunts, especially the ones that are all on foot. Amateur Radio Newsline’s Joe Moell K0OV helps coordinate happenings like these and has news of two major events.
--

Every two years, hams from around the world gather to see who is best at on-foot hidden transmitter hunting, also called foxtailing, radio-orienteering and ARDF. There are separate events on eighty meters and two meters, each with five transmitters scattered in a forest that can encompass 1000 acres or more.

Competitors are divided into five categories for males and four categories for females. Each country may have up to three persons per category on its team.

Back in Y2K, the championships were in China, with a dozen stateside hams among the competitors from 26 countries. This year, the excitement moves to Slovakia and takes place from September 2 through 7. Once again, ARDF Team USA will be there.

Would you like to be on that team? If so, contact me right away, because USA must submit its Letter of Intent to the Slovakian hosts by the end of January.

Of course you'll need lots of practice beforehand, and you can get plenty by attending USA's own national ARDF championships, which will be April 19-21 in Pine Mountain, Georgia, near Atlanta.

Find out about both championships -- Slovakia and Pine Mountain -- by visiting my Web site: www.homingin.com. Homingin is one word. Then apply for the Team USA roster at my e-mail address on that site, or by postal mail to my callbook address.

Maybe you'll bring home a medal this year. From southern California, where this year's local radio-orienteering training sessions will begin soon, this is Joe Moell K-zero-Oscar-Victor for Amateur Radio Newsline.

--

In case you missed it, Joe’s website is www.homingin.com. “homeingin” is one word. (K0OV, ARNewsline(tm))

**

NEWSCAST CLOSE

With thanks to Alan Labs, Amateur News Weekly, AMSAT, the ARRL, the CGC Communicator, CQ Magazine, the FCC, the Ohio Penn DX Bulletin, Radio Netherlands, Rain, the RSGB and Australia's Q-News, that's all from the Amateur Radio Newsline(tm). Our e-mail address is newsline @arnewsline.org. More

information is available at Amateur Radio Newsline's(tm) only official website located at www.arnewsline.org. You can also write to us or support us at Amateur Radio Newsline(tm), P.O. Box 660937, Arcadia, California 91066.

A reminder that the nominating season for the Dayton Hamvention Radio Amateur of the Year, Technical Achievement and Special Achievement Awards closes January 31st. Nominations should be sent to Post Office Box 964 Dayton Ohio 45401. They can also be filed using the e-form at the Hamvention website. Its at www.hamvention.org.

For now, with Bill Pasternak, WA6ITF, at the editors desk, I'm _____ saying welcome to the year 2002, 73, and we thank you for listening." Amateur Radio Newsline(tm) is Copyright 2002. All rights reserved.

I have 2 1/2 Andrews Hardline jumpers.

One is approx 7 ft and has Andrews N male connectors on both sides. $40

And the other is approx 14 ft and also has Andrews N male connectors on both sides $65.

I have not used these jumpers in some time. They look in good physical shape.

Hi folks. I'm looking to purchase an Ameritron RCS-8 remote coax switch and a Comet GP-15 triband vertical plus their triplexer. I would also consider a Diamond V2000A plus triplexer.

Please email price and condition to NeilR@innermedia.com or call:

Neil Rosenberg
(603) 465-2788
or
(800) 962-2949

Thanks and regards;
Neil

809. Kenwood TS 520 Troubleshooting HELP

Newsgroup: rec.radio.amateur.equipment
Date: 2002-01-18 21:41:36 UTC
From: clannan@hotmail.com
Message-ID: <24958b5c.0201181341.6e0285bd@posting.google.com>
Source record: 48816

TS 520
Radio seems to work ok except 1 of 3 of the 10 meter bands, 28.0 will not funtion.I can get a 60 ma reading on IP (USB or LSB) when in transmit mode but that is all it will do, no ALC or or other output readings on the radio or SWR meter no matter what.
There is no recieve at all on 28.0 except at about 28.375 the is a faint carrier and if I flip the band switch to 29.1 (the 3rd 10 meter band) without ajusting the VFO the same carrier is there but much stronger.

I have had the radio ajusted to the manual specs and all seems to tune just fine, as the manual says. 10 meter is tuned with the band sellector in the 28.5 position. Another thing, the radio has a tone just like the 25hz tuning tone throughout the radio on all the bands (except 28.0), sometimes without moving the VFO you can switch the bands and the tone will be uniform across them all. For the band problem, I suspect the 28.0 crystal (36.895 ?) but this is my first HF rig, I just bought it off Ebay as a working radio, I guess that means the lights come on.....This is the only band I can use as a tech and as my
luck would have it, its the only one that does not work.

Any help would be great from the Ham communitee.

Thanks in advance and 73's

Chris Lannan, N1IPO

Does, indeed, sound like the crystal for that band. But instead of dead, there may be a bad connection at the crystal, or the switch wiring for it, etc. Have you looked at it carefully?

hi ken,
consider first a good mecanical ground of your antenna.
if you are using heliax cable,ground the outer shell of the heliax on your tower or mast BUT ground this tower or mast too.
if you use the ground of another source,like if you take a cable from the earth ,going along your house there is a danger that your "flying ground" good be better then your electricity supplier ,you see what i mean?
.
it si possible to bye in some electrical parts resailer a device that is connected between the radio and the wall that is indicated the QUALITY of the ground of the outlet,if is good there you could take an outside cable from the mast to the earth hitout danger .it means that there is no "difference of potential" in the ground .

let me know if i can help,

Ham Radio University 2002/ARRL New York City-Long Island Section Convention

North Babylon, New York - On Sunday, January 20, 2002 at 8AM, the doors of the Babylon Town Hall Annex on Phelps Lane will open for the third annual Ham Radio University. Ham Radio University 2002 is a day of education about Amateur Radio.

This year the forums have been expanded and new forums have been added. There will be twenty, one-hour presentations with special forums geared to the non-ham as well as the experienced ham radio operator. The focus will be "hands on" with many demonstrations.

Come join us at the Babylon Town Hall Annex, Phelps Lane, North Babylon, Long Island, and learn about everything from satellite communications, low power operating using radios as small as a tuna tin, how to put up an emergency antenna, the latest information on advanced digital communications, finding and fixing radio frequency interference problems to purchasing your first station equipment or handi-talkie and a special "Ask the Experts" forum. There will also be a Special Event Station W2V set up and operational on HF. There will live SSTV pictures uploaded to the NLI WWW during the event.

TALK-IN W2GSB/r 146.685 -600 110.9 PL

HRU 2002 is sponsored by the Great South Bay ARC and is a cooperative effort between over twenty clubs and organizations in the New York City- Long Island area. It is also the American Radio Relay League, New York City-Long Island Section Convention. Besides the forums, there will be tables set up with information about the different groups, ham radio classes, exam session schedules, public service and other activities.

Join us for a day of fun and education for the whole family!
Admission is open to all - donation is $2 per person.
(complimentary refreshments available)

For more information contact:
Phil Lewis N2MUN, Chairman, n2mun@arrl.net or call 631-226-0698
George Tranos N2GA, ARRL NLI Section Manager, n2ga@arrl.org or call 631-286-7562

I have a friend who has worked on some. He told me that most of the
problems are related to dirty transistor sockets. He says cleaning the
transistor leads so they make good contact should make a difference.

Actually, Now that I think of it, that likely isnt the problem, as I
have an old junker of one thats full of dirt and is a mess (but always
worked fine).. this one is like new condition everything sparkles. No
oxidation or anything. Must be a cap.

It's possible it could be the crystal, but I would think it's more
likely the bandswitches are dirty and not making good contact, or the
coil packs need an alignment. MK

Hi all !!

As we all know the ordinary monitors we use for our PC's will bring noise into our (shortwave) receivers.
You could manage that with some measurements like beads, distances etc.
What I was wondering: does anyone has experiences or has otherwise opinions about using TFT/LCD screens and the noise *they* bring in???

I heard some positive things about the latter, but before buying I want to hear some opinions from you out there.

Thanks very much for your time and reaction!

I have heard that some of the external psu's with these screens are very bad
for causing interference and need to be replaced to solve the problem !

I have another way you can scam people on eBay.

Don't even buy the radio. Just put it up for auction. If the final bid is to your liking, then buy the radio and ship it to the winner. If you don't like the final bid, just refund the buyer's money and stonewall them when they ask you why the money was refunded and whether you still intend to sell them the radio.

While this is technically against the rules, eBay seems not to enforce it unless the buyer can prove you are unwilling to sell the item and none of the above seems to be enough evidence for them. It that unless you actually send the buyer an email incriminating yourself, eBay will look the other way.

I have pretty good reason to believe this will work as I was on the receiving end of such a scam. I got my money back so it could have been worse (which is pretty much what eBay told me). But I never got the item I won the bid on.

I am speculating as to what the seller was up to since he totally stonewalled me after the refund. But the facts are 1) I never got the item, 2) he refunded my money, 3)he stopped answering any email and 4)eBay said they would not discipline without more evidence that he would not sell me the item.

One additional fact: He told me a couple of times that he shipped the item and strung me along (after he had my immediate payment) before quietly refunding my PayPal account. So I'm sure you could devise another profitable angle to this by keeping the float on someone's money for a couple of weeks.

I just acquired an IC-730 w/o a manual or mic.

I've adapted a D-104 to work OK with the built-in pre-amp...I'm also looking around for an SM-5 to go with it and a manual.....and I was curious as to how to turn on the speech processor on the IC-730. I don't see a switch on the front panel! Is there something under the top cover that enables the speech processor? How do you switch it on and off?

Thanks,

Al Urkawich KB1LI

How high is high???

Vacuum tube gear is very forgiving of operating with high SWR. I've done it with SWR of 5:1 + over the course of several years and the finals were not affected.

However, transistor gear may die as a result of it. But most new solid state rigs throttle back to protect themselves -- but not advisible to operate that way. A lot depends on the design. I've frazzled older transistor gear when the antenna connection became faulty even though there was foldback protection. On the other hand -- one of my new Kenwoods -- just throttled back from 100 watts to about 10 watts when a trap connection got corroded. I immediately corrected the problem.

So to answer your question IMHO --- for solid state equipment --- don't push your luck

Most new rigs have a built in tuner that will typically tune out SWR from about 3:1 down with no problems.

An outboard tuner (transmatch) will match most situations.

847. Source for Yaesu FT1500 power connector

Newsgroup: rec.radio.amateur.equipment
Date: 2002-01-19 17:59:11 UTC
From: <>
Message-ID: <3c49b2f5.8259556@news.igs.net>
Source record: 48753

I'm the happy owner of a Yaesu FT1500M 2 meter rig. I am the unhappy seeker of a source for the power connector.

I want to make up several power cables so I can use the rig in the car, the boat, etc. But I can't find a source for the connector.

It is probably the same connector used on other Yaesu VHF rigs - a plastic shell with two connections in a T shape.

Any Yaesu owners out there know where to get these connectors?

I'm in Ottawa, Canada; however, I'm sure a US store could mail me a few.

Thanks

Sam -- Sorry Not familiar with the FT-920.

If the FT-920 has a tuner it sounds like it is tuning out the VSWR and the rig is seeing a VSWR (1:1 to 1:15) which is perfectly acceptable. I'm surprised it tunes out a VSWR of 5:1. My Kenwood won't do that. It is the SWR at the rig output to the tuner which is important. After the tuner the SWR can be high without a problem. Thats what the tuner is for -- to match impedances and present the proper impedence to the rig i.e., 50 ohms. The antenna impedance can be considerably higher or lower than 50 ohms. The tuner takes care of that within its limits of impedance matching.

If you have a long run of coax, you may incur a loss across the coax with a high vswr.

Also you should derate the coax as a function of VSWR. If a coax is rated at 1 kW power handling capability, you need to derate it as a function of VSWR i.e., VSWR is 3:1 derate your coax by a factor of 3 = 330 Watts. Reference for this is:

Both the ARRL Antenna Handbook and Reference Data For Sams, Engineers: Radio, Electronics, Computers, and Communications state that the power rating for lines are for unity voltage standing-wave ratio. Safe operating power is inversely proportional to SWR expressed as a numerical ratio greater than unity. Note: This is a safe operating area of coax cable (break down voltage) not to be confused with loss factor in coax as a function of SWR, which is covered in many text books.

Hope this helps

> Well, the FT-920 reads 1:1 to 1:5 and external SWR meter reads 3:5
to 5+ .

If the internal meter is reading 1.1 to 1.5 then the rig will be fine.
This meter is reading the SWR between the transmitter and the tuner
and the tuner has been able to match the load to the transmitter okay.
The external meter is reading the SWR on the feedline going to the
antenna. This means some additional loss in the feedline, the amount
depending upon the type of feedline, the length and the frequency.

I'm assuming you mean the FT-920 reads 1.1:1 to 1.5:1 and the external
meter reads 3.5:1 to 5.0:1 or greater.

Yes it is under the top cover trap door. There should be a sticker
fixed to the underside of that little trap door. I forget exactly
which switch, but I used to run my mic gain at the 9:00 position with
the SM-5 gain at the 11:00 position and the processor on. I always was
complemented on my audio and most could not tell I had the processor
on. It is when those want to crank everything up the processors sound
crappy.

I have been assigned the task of selling a rather large quantity of
Vacuum Tubes for a non-profit group.

I would like assistance from anyone familiar with one rather interesting
one. The markings are as follows:

On the box-
U.S. Navy - CWL 837

On the tube-
RCA - CRC - 837

Any info on this tube appreciated.

I would also be interested in any links, or news groups, with
information as to the value of various tube types.

Thank you.

Louis

I used to always run the processor "on" with the 730. You get almost
double the average output, and like you say the audio is still ok as
long as you don't get carried away on the drive. The 730's average
output is kind of low with the processor off. "Compared to the average
rig". MK

Hi Sam,
AC6V's got your answer well covered. Why don't you try to tune the antenna so as to preclude problems and improve it's overall efficiency? As much effort as it takes, though it'd be a pain in the keester <sp>, that'd be a better path.
Good luck to You,
Drink, WP3JQ

878. FS Plantronics Headset

Newsgroup: rec.radio.amateur.equipment
Date: 2002-01-20 16:50:02 UTC
From: Mike Kulyk <mkulyk@optonline.net>
Message-ID: <_yC28.3148$Wu1.437922@news02.optonline.net>
Source record: 48783
Cross-posted to: rec.radio.swap,rec.radio.amateur.equipment,rec.radio.amateur.swap,misc.industry.electronics.marketplace

I have a very commercial light weight headset make by Plantronics. This is a dual muff headset with a switchbox in line PN SHS 1851-02 0198 and a long coiled cord ending in a 2 prong plug.. This was used at a aircraft control center for radio and telephone.

I have the Plantronics prints for this headset..

I am asking $200..

881. How to open Icom IC-720A to get to the bandswitch? (It was decribed in May 1996 issue)

Newsgroup: rec.radio.amateur.equipment
Date: 2002-01-20 18:04:49 UTC
From: rasw <atdot.dotat@at.sorry>
Message-ID: <a2f0s9$3fncs$1@rn.area.com>
Source record: 48786

Folks:

Can anyone explain to me what I need to do to get to the rotary bandswitch in the ICOM-720A? Am I right in thinking it's in the RF cage under the topside? (I don't want to go prying off the lid if it's not there.)

And what do I need to take out to get there? It looks like the PA in the back may have to come off.

Someone told me that this was described in the May 1996 QST, Page 74, but my libarary stopped getting QST on microfilm in 1982 ("Nobody was asking for it", they said).

889. Simpson 260's

Newsgroup: rec.radio.amateur.equipment
Date: 2002-01-20 19:09:00 UTC
From: Gary Glaenzer <nobulltrans@irtc.net>
Message-ID: <fBE28.5$M79.131089@news2.randori.com>
Source record: 48794

I've got several 260's for resale (series 6 w. overload protection), I bought them 'as is, not working', all had a bulging 'C' cell and corroded contacts.

I have the following if anyone is interested:

2 series 7P
one series 6P
one series 6P with a series 4 movement (or face plate) in it; Simpson tech says no 4's ever had OL protection, but this one does and is identical to a '6P' inside.

all checked, new batteries, new leads (Simpson, not R.S.), calibration is accurate

e-mail me if anyone is interested

890. Installation insight for 2002 VW Passat wagon?

Newsgroup: rec.radio.amateur.equipment
Date: 2002-01-20 19:31:56 UTC
From: Bert Hyman <bert@visi.com>
Message-ID: <Xns919C89916ED15VeebleFetzer@209.98.98.13>
Source record: 48795

Anybody have any experience with installations in a 2002 VW Passat wagon?

I'm particularly interested in techniques for routing cables from the dash area to either of the storage compartments on the sides of the rear cargo area.

There's already cabling for a CD changer going to one; is it possible that VW had the foresight to use a conduit or some sort of cable raceway, or do you still have to rip up the carpeting to run cables?

I think the '02 Passat is very similar mechanically to the '01.

Chris,

About the only thing you will do if you increase power is to increase the strain on the finals.
The perceived signal on the other end does not increase linearly. To achieve any preceiv-
able signal increase you would have to go to 400 watts to get 6 db or 1 S-unit out of it. The
bottom line is, it isn't worth it.

hello,

i am listing for sale or trade the following:

1 Swan 500 (not c) transceiver 80-10. output 70 watts on 10m 200+ on 80m cosmetics 8.5 of 10. no letter rubs, broken meters. all lights work. have had excellent signal and audio reports with it. no extra holes or mods.
1) Swan model 410 external vfo. works/looks great.
1) Sure 444 desk mike with Swan logo.
1) Swan model 22b vfo adapter for external vfo
1) Swan model vx-2 vox unit to allow semi-break-in cw and voice vox operation
1) Swan 117xc power supply/speaker. 2 mods done. one is two audio cables with rca plugs on them for use with a timewave dsp-9 (dsp unit not included. mod can be removed) the other is a 12volt muffin fan wired into jones plug at rear of radio. fan sits on four feet about the finals and keeps everything cool.
1) Swan wm-3000 2000 watt meter. works well. has 200/500/1000/2000 scales and is a powered meter.

this station is operational and on the air in my station. an on the air qso can be arranged with a serious buyer. i will trade the above for a good/very good condition heathkit hw-9 with the warc kit and would like the matching tuner and wattmeter with it. cash price would be $325.00 plus shipping from 33860. pictures are availible upon request.

thanks for reading.

900. Mounting Hardware for Ford Explorer?

Newsgroup: rec.radio.amateur.equipment
Date: 2002-01-20 22:52:03 UTC
From: Brad Steinman <mcsebrad@hotmail.com>
Message-ID: <u4migsf4ee3m4e@corp.supernews.com>
Source record: 48705
Cross-posted to: alt.radio.scanner,rec.radio.amateur.equipment,rec.radio.amateur.misc,rec.radio.scanner

Just wondering if anyone could point me to a vendor who sells a console mounting kit for mobile radio equipment. Specifically, for a Ford Explorer.

Not the typical mounting kit to mount a rig to under the dash, but a box-like container that would be just to right of me.... i.e. the center console. I would figure that the mobile rigs would be mounted vertically in this configuration.

Anyone heard of such a thing? or know where plans to build/modify such a thing would be? or even a person's/vendor's name that may not have the item, but could me headed in the right direction?

tnx

I can't provide any definite answers but u should look for companies which cater to public safety (police, fire departments, and the like) they usually have these type of items one such company would be Galls www.galls.com but i don't believe they have anything for the explorer
i am also on a similar quest to find good mounting solutions for my explorer for now i have fabricated a rack out of lexan that spans the transmission hump and tucks under the front floor mats to keep it in place

if you would liek i can take some pictures of it for you
just drop me an email
also please keep me posted via email on what you find

Pop the end of the console off (the end with the cup holders). Bolt the mounting bracket to the dash end of this piece. Pop it back on, and mount the radio in the bracket. I have mounted dual banders in two Explorers, and this makes a nice convenient location for the rig.

Hi Brad --

I can't offere anything about console mounting kits. But, perhaps, the way I solved my Icom 2710 mounting problem would help: I bought the remoting kit for it, used the "indistrial strength" hook-n-loop adhesive-backed fasteners from Radio Trash to lount the control head to my dash directly under the conrols and mounted the radio under the passenger seat. In my case, my front passernger seat lacks electric controls. If it was fully adjustable with all the motors underneath, I would have otherwise mounted the radio under the rear seat. BTW: there are enough holes in the under-seat brackets that no drilling was necessary.

Hope that helps & 73 --

Jim Piper / KD6YKL / kd6ykl@arrl.net

Did he also kill Tippit?

This is just a guess, but I think that Jack Ruby killed Tippit.
Clearly, he is the only proven murderer.

As for Oswald, no need for any guesswork there.

http://pages.ivillage.com/justicewell//links.htm

And isn't that the miracle of the silent movie era. How nice it must
have been, not to have to listen to the Bullshit that people like
John McAdams promote, for the sake of keeping the truth about
the Kennedy assassination buried.

I would like to build a Litz DTMF decoder, and have found two schematics. Both make use of the MC145436 Tone To BCD Converter chip. I have searched the Internet in vain trying to find one. Jameco no longer lists them. Neither does Digi-Key. Is there a replacement available? Lacking that, are there other Litz schematics around that don't use that particular chip?

918. WTB: Internal RTTY Module for JRC NRD-525 Receiver

Newsgroup: rec.radio.amateur.equipment
Date: 2002-01-21 02:50:01 UTC
From: bowenb@best.com
Message-ID: <3c4b8104.169344205@text.giganews.com>
Source record: 48724
Cross-posted to: rec.radio.shortwave,rec.radio.amateur.equipment,rec.radio.swap

I've owned my JRC NRD-525 for about 1 1/2 years and really like it. The radio is loaded including the ESKLAB detector board, but the one thing it lacks is the RTTY board.

Therefore, I'm interested in acquiring a CMH-530 RTTY Demodulator Unit. I've checked all the usual sources (Universal, etc.) and a few off-the-wall sources (called my old boss in Japan and had him make some inquiries), all to no avail.

So. if any of you folks out there have a CMH-530 you'd like to sell OR if you have a lead on a source for one (and it does not have to be in the USA, just as long as the currency of that country is convertable into US Dollars), either reply to the newsgroup OR send me an email at bowenb@best.com with the details. I promise a quick reply!

Thanks for your attention.

Regards,
Bill Bowen

920. TM-732A Display Problem

Newsgroup: rec.radio.amateur.equipment
Date: 2002-01-21 04:10:33 UTC
From: spagnet@austin.rr.com
Message-ID: <ZwM28.15866$HS4.738189@typhoon.austin.rr.com>
Source record: 48726

In the last several months, I've noticed that when I turn on my TM-732A Dual Band Kenwood, that the display would illuminate all digits and the receive audio would be clobber with a whine / buzzing noise. Cycling the power corrected the problem and the unit would work fine until turned off. However, now I've got a bigger problem.

When the power is turned on now, only the lower left 4 or 5 digits light up. The unit comes on seconds after power is applied without hitting the power switch. It cannot be turned off. Some front panel controls seem to work in that they manipulate those lower left segments in the display can be changed, but essentially the unit is not working. I cannot receive / transmit. A master reset did not correct the problem.

Has anyone experienced the same problem or have any suggestions as to what the problem might be. Kenwoods tech bulletins were of no help.

-KI5XW

Got it out! Now to solid-state the bandswitch.

There are photos of the thing here. Absolutely AWFUL design. I'll think twice before buying another ICOM radio.

The "traces" that were the stationary part of the switch contact have simply worn through. For the short term, I can make up new PC boards to replace them.

Photos here:

I saw that, but didn't think the included IC's would include the
decoder. Maybe I should contact him. Thanks.

Dick

LOL!

Is there anyone from the age of 12 upwards who does not already have
first hand knowledge (and I choose my words carefully) of this
"amazing exercise system"?

948. FS/BO: Collins 30K-4

Newsgroup: rec.radio.amateur.equipment
Date: 2002-01-21 18:00:39 UTC
From: Walter Treftz <penguino@atlantic.net>
Message-ID: <3C4C5746.5228EA77@atlantic.net>
Source record: 48651

FS: Collins 30K-4 Vintage HF Transmitter.

Taking offers on my partially restored 30K-4 xmtr.
Several years ago I acquired this rig with the idea
of restoring it after retirement. The time has come
and I have come to the conclusion that I bit off
more than I can chew - not technically as it is very
easy to work on (in 5' rack) and straight-forward
circuitry - but timewise. I have been putting about 75%
of my spare time on restoration taking away from
projects that I am now more interested in (i.e., VLF,
antennas, D/F).

It is about 75% restored. On all the individual chasis
they have been cleaned and things like xfmrs, chokes,
etc. were removed, cleaned, repainted, replaced, etc.
Only the cabinet (5' Bud rack) remains to be refinished.
Most of the components have been checked by applying
either 110vac (via Variac) or B+ (variable 0-500vdc
supply) and slowly bring up the applied voltages to
season the electrolytics, check insulation, etc.

It is missing the tubes (6V6, 807, 4-125A in the RF
and the speech ampl/mod tubes). It has the 3-5 mhz
RF coils & xtals. It is unmodified in anyway. The
only addition has been a set of heavy casters so as
to move it about but I plan to remove these so it is
"virgin"

Digital pix are available (complete unit, before/after
of each chasis, etc) to the seriously interested. It
comes with a copy of the complete manual.

I am not interested in donating it and have a lot of
work in it along with the original price I paid.
Naturally, a pickup deal would be ideal as it probably
weighs 500 lbs or better.

If interested, contact:

I guess Bill it's your personal choice whether you buy or sell on e-bay but the facts remain that you'll get more money on e-bay then selling it on a list or locally.
So if that makes someone a loser in your mind then so beit. Your opinion doesn't matter to 99.999999% of people anyway.

I guess I should have asked what are the names of the ham radio outlet
stores that take trades on new equipment.
I tried posting the amp here some time ago but there were no serious
buyers.
Thanks

My two candidates for my next rig are the Yeasu FT-100D and the ICOM IC-706MllG. They're both pretty close; almost a "Ford vs Chevy" type of situation. Comments requested, both pro and con of course. I realize this topic has probably been covered before. My apologies to the group for bringing it up again, I'm a recent discoverer to this group.

Thanks,
73

967. How far on 1/3 watt?

Newsgroup: rec.radio.amateur.equipment
Date: 2002-01-21 23:30:51 UTC
From: tate@surfbest.net
Message-ID: <3c4ca33f.860767437@news.surfbest.net>
Source record: 48673

Bought an Alinco DJ-C1T on eBay. It transmits at 1/3 watt. I range tested it and within one mile on simplex it just doesn't push out the signal. Frequency is right on, battery is charged up, audio quality is great. I receive repeaters just fine. I am in the DC area. My past communication in this area has been pushing 50 watts on my mobile so I never noticed a problem. When I lived in Seattle I frequently worked repeaters on a watt that were 50 miles away, albeit in the mountains. I notice a few new HT's transmit at 1/3 and 1/2 at the low end, so hte intent must be for these units to cover some distance more than a mile.

Any suggestions on what else it could be with the radio or the distances you achieve with low power are appreciated.

My 0.7W HT easily reaches repeaters up to 10 miles away with the rubber ducky antenna. I can marginally reach repeaters up to about 25 miles away.

It's amazing the ranges that can be reached using a properly located and well designed repeater. Your simplex operations are probably limited as much by the receiving station as by your lack of power. Most home stations are not going to have the advantage of elevation that most club repeaters will have. Also, many folks that are serious about low power 2 meter operations are operating with directional antennas and are using SSB and/or CW.

Well my W2A bit the big one. I have what has been described in the groups as "the red light of death." I sent it to Icom they said sorry, blown CPU and they don't make them anymore.

Would anyone like a sweet deal on some very clean accessories: batt packs, charger, 12v cig, headset, mic/spker, manuals, case, etc, etc, plus I'll even include what is now a nice anchor for a very, very small boat!?

I just ordered a Yaesu VX-5r, I really want 6m anyway. I don't think any of the Icom stuff will be compatible.

If you get more than one reply, pse pass them on to me. I also have the
NRD-525
and would like to have both the RTTY and VHF boards. I've had mine for
about 5 yrs (after using one for several years as R/O on merchant ships)
and
its the best rcvr I've run across.

Amateur Electronic Supply accepts trade-ins on new equipment. You can do it two ways -- pay for the new radio at current retail price, then send your amp in, and they will evaluate it and issue a refund for its worth -- or you can just send the amp in, and they will hold your new radio until the amp is received and evaluated.

I've also called them on the phone to just see what a particular piece of equipment would be worth on trade, and they gave me a quote, pending receiving the equipment for evaluation.

Their web site is at http://www.aesham.com and their general number is 1-800-558-0411.

Unless there are some repeaters on very high ground your 1/3 watt is not worth messing with. The repeaters are probably running 50 to 100 watts and just think how much more that is than the 1/3 watt. I have a samll rig operating around the same power level and while I can pick some spots and repeaters to work, it is not very good communications while walking around. The 3 watt HTs will have 10 db more gain that what you have.

Source record: 48689

HI:

I am looking for a Dead or Alive 42-50 Mhz
VCO Block for a MT1000 so we can proceed with
the following:

Hi:

A friend of mine and I are under taking
the proper approch to converting MT1000 / P200 Series Low Band 42-50 Mhz radios
to the
46-54 Mhz range for Ham Band operation.

We know this has been done, but so far no
one has posted what changes are required.

We do know the VCO goes out of lock with Hex
Editing of frequencies beyond 52.35 Mhz.

I suspect a small value cap change around the Rx-TX VCO diodes is all that is
needed, however I do not have a 42-50 Mhz VCO Block
to make a A-B comparison

We are very serious in making these units work for all, so if you have any
suggestions,
know of someone who has already done it (to save time on duplication of
effort, please
contact me. We would be willing to " Reward"
the perosn(s) that have sucessfully modified
the following

Karl:

This is purely third hand, but....
I know several hams who have had serious problems with the 100D (required shipping the unit in for repairs). I haven't heard much of this with the 706.

Paul AB0SI

p.s. check eHam user reviews if you have not so yet.

I am in the DC area as well and I have the dualband version of that radio.
On 2m it is pretty much useless but on 440 it isn't too bad with the
repeaters around here. Look up a few repeaters close to you if you don't
know any and try it out on them. You may be surprised.

I was not going to split hairs, but if you want to , you need to redo
your calculations.

His 1/3 watt output is .33+ watts. For 10 db it would take a 3.3+ watt
output HT. It would be somewhat less than a 10 db advantage.

nd repeaters to work, it is not very good communications while

Am looking for a supplier for the T/R relay for the Kenwood TS520S.
Kenwood people have been no help -- the relay is no longer available
from them. I found one supplier that has a "substitute" for $88.

If you have one for a reasonable price, e-mail me off list. Just
remove the nospam from the return address.

73,
Bob WB4NLJ

Don't bother with it, the Rtty converter is really pretty pitiful, very
limited as far as speed and shift rates and a simple PC interface will
be superior in almost evey way, especially as far as storage/editing of
the stuff you receive.

I checked everything, even tried inserting a 3-conductor plug with
nothing connected, the result is the same. According to the 'Technical
Supplement' manual you have to use a 3-conductor plug for correct CW
operation, 2-conductor plugs will cause problems.
I'm convinced that some circuit in the rig doesn't work anymore,
although I have no idea why , I'll see if I can get it repaired.

Regards,
JJ

Good Grief.. Another Crack Pot. If anything this proposal is racist. I might be swayed to vote in a reduction of application fees for minorities, but not other code or exam requirements. Ham Radio never has, and never will have any racist elements. This proposal is just plain silly.

HI Karl, you cant lose on either one, but I have switched after many years to the FT 100....doesnt even have to be a D to have some advantages in my book...better noise redution, better transmit audio out of the box...just as easy if not more so...to use...Got a nice used one if you wanna save some money!! 73 murray K5MDM

>

Actually, there are two different adaptors, both yaesu parts. (at least
for my FT-50 which has the same 4-conductor single pin port)
One clips to the antenna of the Ft-50 and such, great for use while
mobile, and the other is just a pigtail adaptor. I have the pigtail
adaptor, bought it at Austin Radio, and find it to work well.

Hello,

I have a Astatic TUG-9 Stand and a D-104 head that I put a electret condensor element into. There isn't any pre-amp circuit and I power the element from a 9 volt in the mic base. I am getting RF into the mic that is causing distortion on the transmitted audio - I know it for sure because it happens when I turn the RF power up. I don't have the problem with the stock microphone. I have used bypass capacitors across the lines leaving the microphone and still have them problem - what else can I try? I have grounding bus and < 1/4 wavelength grounding strap to ground (basement station).

Thanks,

Scott.

Hi Scott,

Here are some suggestions, some of which you may have already
tried, but I can't tell from original message:

- Use shielded wire for all audio connx inside the mic.
- Put a bypass cap on the positive battery lead.
- Put ferrite beads on the mic audio and PTT leads inside the
mic plug, right where the wires are soldered to the pins.
- Verify that the shield on the mic audio lead in the cable
has not opened up on you.

Questions for you:

- Does the stock mic have a dynamic element or an electret?
- Where have you installed bypass caps? What value?

Is it a coiled cord? In my case running a direct wire from the plug at
the rig to a common gnd inside the mic solved the problem. Don't know
if it was simply poor shielding or possibly some resonance due to the
cord. Anyway, it fixed it. (D104 + IC-745 barefoot)

Message-ID: <1011736776.30117.0@iapetus.uk.clara.net>
Source record: 48640

Does anyone know where i can get hold of a service manual for a kenwood r1000 HF reciever or alternativley does anyone know of a stock fault on these units that causes the display to fail after 1/2 hour.

I've been told this fault can be caused by the main IC type MSM5524 but it appears to be a discontinued part.
It does seem to me that if it's an IC fault it should stay faulty (i know this doesn't always follow).
I suspect the possibility of a PSU fault or PSU decoupling capacitor on the display supply rail.

Hope someone can shed some light on this.

All the best Dave

Noise from a monitor is from 2 sources. One source is from the video signal,
which you can use beads for.
A second souce is the converters.
The backlight from a TFT or LCD can produce noise.
However most bigger brands like Philips, HP,Sony screen these converters
sufficiently.
When you visit a shop, bring a portable shortwave receiver....Just to be
sure...

Good luck.
W.

1035. Re: Purchase pondering: FT-100D vs IC-706MKIIG

Kar,

I am sure you won't go too badly wrong with either. I have, however, heard
of more repair
issues with the FT100 series than the 706. I have 2 706s (one the MKIIG)
and they have
served me quite well both in fixed and mobile service. If you ever have a
need to operate in
some service where you must meet NTIA (US military government comms)
standards, the
FT100 will NOT pass muster. My radios must pass these stricter standards,
and the 706
meet the requirements. I was about to buy the FT100D when I found out that I
couldn't use
it for Civil Air Patrol after this year. I still like them, tho.

Thanks, Max, and to others that replied.

Unfortunately, they want $17 US (that's about $5,280 CDN these days!) to mail a $3.50 connector to Canada! Then, Canada Post will charge $5.00 (CDN, thank God!) to clear it through Customs and collect $0.25 sales tax on it). I could damn near by a new rig for all that money!

1038. IF-10c for Kenwood TS680s - sources?

Newsgroup: rec.radio.amateur.equipment
Date: 2002-01-23 00:31:06 UTC
From: Sandy Lynch <w7bx_nospam@arrl.net>
Message-ID: <evn38.1164$KA2.1661@rwcrnsc52.ops.asp.att.net>
Source record: 48647

Greetings ...
A long time ham chum of mine has a Kenwood TS-680s transceiver. In order to get the thing to work with logging programs (i.e.. LogWindows), apparently he needs to get a small device, an interface kit, from Kenwood called the IF-10c. It appears that the product is now out of production. Any clues on where to find one and how much they cost?

Thanks and regards,

Sandy

1042. MFJ SWR problems

Newsgroup: rec.radio.amateur.equipment
Date: 2002-01-23 01:46:01 UTC
From: sapbasis@iname.com
Message-ID: <8455963.0201221746.d2a63fb@posting.google.com>
Source record: 48550

I have an MFJ-949C antenna tuner (very similar to the 949E). When I run my Kenwood TS-430S into the dummy load and increase power the SWR stays at 1:1 until I hit 50 watts. At that point, any additional power I apply comes back reflected and the SWR quickly goes up while forward power stays at about 50 watts.

If I try and tune it into my Dipole I always get an SWR of 4:1 although the antenna seems to check out fine with no resistance and no short circuits anywhere.All cabling is brand new RG8 with a 3 foot run from the Kenwood to the MFJ tuner. I'm assuming this is most likely a problem with the antenna tuner and was wondering if anyone had any ideas?

Thanks,
Todd

1046. Drake Dummy Load - 1000 Watts - Ham Radio

Newsgroup: rec.radio.amateur.equipment
Date: 2002-01-23 03:01:11 UTC
From: Dan Long <w4tq@mindspring.com>
Message-ID: <a2l983avo1@slb6.atl.mindspring.net>
Source record: 48553

Drake Dummy Load - 1000 Watts - Ham Radio

This is the Drake DL1000 dummy load. It is in very good condition, with no significant scratches or blemishes. The rubber feet are also in excellent condition. It is rated at 0 - 30 megahertz, covering all of the ham radio HF bands.

I'm not sure of the designed duty cycle (they are not usually 100%), it's not on the nameplate. Some hams report that they install muffin fans on the side of the DL1000 and use it at 1500 Watts, key down for 10 minutes. This would make sense, but do so at your own risk.

For those who aren't aware, a dummy load like this is designed to substitute for a 50 ohm antenna when testing transmitters and transceivers.

For auction on Ebay, click on:

Hi,
I have a very good condition Motorola SP-21 2 Watt UHF hand held radio
for sale its about 2 years old with very little use! This is not a FRS
Radio but a high quality Motorola business radio.

* 38 differant CTCSS tones

* 12.5/25 kHz programmable channel spacing
* X-Pand - Motorola unique voice compression technology for
superior audio quality.
* PL Standard Codes (Private Line)
* Voice prompt programming
* Built-in VOX - Voice Operated Transmission
* Lightweight compact design
* Nickel Cadmium Battery
* UHF Whip Antenna * 2.5" Belt Clip

I am asking $75 plus shipping, these radios sell for over $200 new
I accept Pay-Pal for immediate shipping
any questions please feel free to e-mail me directly at

rusty@dccnet.com

TROLL.

Having said that, I'll post my reply as well.

The amateur exams have already been "dummied down" enough for ANYONE to pass. If you want these "under-represented members of society" to get involved, I'd suggest offering classes in an inner-city community center or something of the like. Or, buy a book, buy a code tape and do it like the rest of us. Come on, if you listen to the bands it is obvious that every Billy Joe Jimbob in Trailer-park USA can now get a license; I am certain that ANYONE else could pass with some study. This hobby has never been closed to anyone because of "discrimination"; it has only been closed due to ignorance and laziness.

BTW, if you are sincere in your intention to bring ham radio to the under-represented, I'd suggest collecting and distributing previously used study materials. I'd be happy to donate mine, and I am sure others on the net would as well. Send an address, and I will send my books/tapes on their way.

Beyond printing the exam in Ebonics (heavy sarcasm fully intended), I don't think there is much more that could or should be done.

1050. FIXED! Re: TM-732A Display Problem

Newsgroup: rec.radio.amateur.equipment
Date: 2002-01-23 03:52:10 UTC
From: spagnet@austin.rr.com
Message-ID: <Krq38.31007$XZ1.1636726@typhoon.austin.rr.com>
Source record: 48556

Before sending my kenwood off to have the display repaired, I decided to dig into it with the schematic that came with it. I isolated the problem to the display unit based on features that worked and those that didn't. In particular, the non functioning power switch (SW1) did not have voltage accross it.

Looking at the schematic, I could see that the power switch should have 5 volts on one terminal which is supplied by regulator IC1. IC1 takes 12V in and makes 5V. Pin 5 of IC1 had 5V on it as expected. Tracing components connected to the 5V supply I could see that several were not powered. In particular C8, the 5V filter cap, was not supplied with 5V. I carefully removed the LCD display and traced feed throughs with a magnifying glass until I found a disconnect between the front and back sides of the board.

My tracing lead me to a feed through that was under C8 - visable only from the front side of the board. I removed C8 with my weller pyro-pen Jr. hot air attachment and discovered a burned up feed through. I circumvented the problem with a piece of small wire connecting pin 5 of IC1 to the emitter of Q4. Dang thing works as good as ever now...yippie. Be sure to keep the contacts for the LCD display clean and touch both the rubber contacts of the display and PCB pads with cleaning solvent before reassembling.

<< I have an Alinco DJ-190T that does everything I execpted, but if I
want run on external power, the battery pack has to be installed and must be
fully charged.
Is this the way it was designed, if it was is there a way to get around it? >>

Hmmm....are you providing enough current via the adapter? (esp. if you are
using an AC adapter...need an amp+ output) I had a DJ190 some time back, ran
it mostly in the car with a homebrewed DC powerplug (straight 12V DC w/some
transient suppression). Worked FB. Didn't even need the batt in. Could you
have a defective cable or connection?

HTH!

Andrew

> transceiver....Eddie

Model# might not be a gauge. I've note'd as Motorola
and other OEMs prices have gone thru the roof, the aftermarket
comm shops will buy new stripped down radios or used lots
at auction, then outsource or retrofit them selves with
unit options. Like if you bought a base model 5.0L Ford
Mustang and put a couple grand in aftermarket performance
equipment in later. Came across a lot of twenty Motorola
HT's at a industrial liquidation sale in Dec. Got them back
to the shop an they all had full option pkg retro-installed
aftermarket. a nice suprise. The 'box-o-chocolates
rule' sometimes applies ?

For a temporary 1/4-wave dipole strung in my attic, will there be
significant (i.e. over say 20%) parasitic losses to the following two
conductors running parallel to the antenna?

(1) A/C sheet metal (steel) duct 35 feet long and 6 ft away, grounded
to house DC ground?

(2) Aluminum gutter 22 ft long and 6 ft away, ungrounded?

If so, how far away do I have to be before each loss drops below 10%?

Assuming I am screwed at a few frequencies where there is resonance,
will there be a significant loss at non-resonant frequencies?

I don't see what has, and will continue to happen in Amateur Radio, as a color thing. Its into every facet of this country. I've worked in the broadcast business for almost 27 years. They did it there too, with the removal "Third Class License". Now.....these star jocks can't even take meter readings. Hence......another dumbing down move.

1068. TS850s 'auroral' on 20m tx and rx.

Newsgroup: rec.radio.amateur.equipment
Date: 2002-01-23 13:39:56 UTC
From: Mike <Mike@g3uof.screaming.net>
Message-ID: <3c4ebd0f$1_3@mk-nntp-1.news.uk.worldonline.com>
Source record: 48575

Hi!

My faithful old TS850s has developed a problem over the past 2 or 3 years - I have already changed the DDS chips (all four) but this hasn't cured the intermittent symptoms. The signals on 20m (it only appears to be on 20m) go 'auroral' sounding and the tx goes widefrequency and unuseable. Sometimes it's there and at other times it's not.

Anyone heard of this problem before?

Thanks,

Mike

Ditto here. From what I read the earlier FTs had internal RF leakage
problems that Yaesu fixed by adding metalic tape whilst the newer radios
came with the fix. Question was how long the fix would last. Thus I
opted for the IC even tho I've had good service from other Yaesu
products, but troubles with Icoms in the past. Only problem I've had
with the new 706 is that the XYL keeps it so busy I have yet to use it!

My main objection to the Ft100 is the "dongles" used for the antenna connections. I had a IC229 that had this kind of connection and it was a continuous source of trouble. The rig got moved from car to car a lot, and I'm sure there would be less problem if it stayed put.

Hello Scott,

I used to have the same problem on my D104.
Whenever I turned on my Amplifier, it fed back to my audio.
The stock microphone cable was ok, so I added a Ferrite core,
and all my problems went away..

I ditto the comments favoring the 706. A few guys in our club
have had FT-100s, nearly all sold them and went with the 706.

The general consensus is the HF section in the 706 is superior
while the FT-100's VHF/UHF section seemed to have the edge. Of
course these are just opinions, not lab test results.

The usual reason for a chirp is fluxuations in the oscillator
power supply, or in your case the VF-1. Internally the VF-1 has
a voltage regulator tube that should keep it stable but if the
supply voltage varies to widely, or the regulator tube is going
bad, it may not have the stability.

A VF-1 doesn't have a power supply of it's own and has
a power plug that goes over to the Viking Challenger. Check to
make sure you are getting enough voltage to the VF-1. On older
transmitters the electrolytic capacitors in the power supply
start giving up and they may need replacing.

If that seems ok, chirping can also be caused by excessive loading
of the VFO. You may want to try to lighten the load that the
Viking Challenger presents to the VF-1 by reducing the capacitance
that couples the two. The VF-1 has a 100 pf capacitor from the
plate of the 6AU6. You may want to put another 100 pf capacitor
in series with it just for a trial. This should reduce the
coupling and the load on the VF-1.

If you need it there is a manual and schematic for the VF-1
and the Viking Challenger in the BoatAnchor Manual Archive at
"http://bama.sbc.edu". There is a listing of voltages that
should exist in the Viking Challenger with key-up and key-down.
Check them carefully and of course, use a dummy load on the
output.

Also, solicite the help of someone on the air. You may not be
able to judge the quality of your signal yourself. Another ear
on your signal may be able to tell you something when you are making
changes and tests.

I have a VF-1 and a DX-40. Maybe I'll hear you around some time
when I get them working. I have a SB-10, SSB Adapter, that would be

interesting to connect up as well.

Good Luck

1099. Neeed Manual for Motorola Tude type HT H23AAM-1001AAM

Newsgroup: rec.radio.amateur.equipment
Date: 2002-01-24 04:12:29 UTC
From: James Gerwitz <jgerwitzsprint@earthlink.net>
Message-ID: <3C4F86BC.FA8B0C7E@earthlink.net>
Source record: 48504

I am looking for a manual for a Motorola HT (Handi-Talkie).
Here is what I know about it:
It is a VHF unit, probably 135 to 174 Mhz, HT Model number is
H23AAM-1001AM
Chassis no. is: NCN6000A
Receiver no. is: NFN6000AW
Transmitter no. is: NTD6000AA
Power Supply is NU-137-4
Unit was manufactured in August 1959
I presently have a manual number 68P81005A40 but it does not cover
this
exact model even though it says it should. The Rx has 1AD4 peanut
tubes.
Can anybody help please?
Jim
AC7FN
HM: 480-948-9304
WK: 480-441-1232
Pls reply directly to jgerwitzsprint@earthlink.net

I suppose if I knew what your house payment was, I might have an idea of what you're asking for that rig. You must have a pretty small house payment if a DX70's sell price will cover it.... OR you're asking WAY too much.

Message-ID: <MPG.16b9e0fdcdab0226989690@newsstand.cit.cornell.edu>
Source record: 48514

Cornell University is planning a satellite project. For data downlink we are investigating 9600 baud using some of our current equipment. We have a Kenwood TS-790S 2m/70cm/2.4G radio and are not sure if it will support 9600 baud data. Does anyone have experience with this radio at this speed, and if so does it work?

We are looking at the Kantronics 9612 TNC. Presume this unit is as good as the other Kantronics gear; anything to dispute this presumption?

Thanks from W2CXM!

Now just a minute ...

I don't use Ebay and the idea of buying something that way gives me
the creeps, but I did look at the listing and it clearly says that the
radio was offered AS IS.

He may be unhappy with what he got, but I don't think he's got a
legitimate legal beef with the seller.

Hello, I have an old mobile UHF radio that I am trying to get some information on. I believe it to be an RCA series 700 radio. Here is the information I have.

Model CMLL4MMB
Channel Element 3457514
Remote head and mic. RCA is the only thing on it.

I can get some crystals for it (that is how I fould out that it might be a series 700) but I would like to have some more information on it. Would also prefer a manual too.

I have searched the web for quite some time and have been able to find references to it but no pictures and no real information.

Thank you for any help you might be able to privide.

that the cords were in. I dont know much about this sort of thing. It
still has the plastic cover on the face of it.This unit appears to be
complete and in very good
condition. I am selling this as is."

looks to me as though you paid to much to start with and the fact it was
missing cord...ESTATE SALE would have set off all sorts of alarms.
But as the man says "I am selling this as is." he couldn't be more
direct than that.
you where willing to take such a risk on that sort of equipment then you
should have figured it might need something and be able to fix it your
self.
Looking at the sellers track record it looks pretty good i would'nt feel
unsafe with buying an item from him.
i looked at several of his past auctions and he describes them well.
you bought an AS IS item it didn't work for you. suck it up and fix it
stop your bitching!

Hi Guys;
I have a complete Yaesu FT-101e Transceiver that I am parting out>
I have everything in Excellent condition except the MODE Switch.
Crystals, Boards, Tube sets, Knobs(not 1 or 2)the complete set, Cabinet.
While I AM NOT giving the parts away as some thought, they will be
reasonable,
I have to take the time to remove them carefully, pack them carefully &
type
all these e-mails :-).
Please ask, or make an Offer but not the entire unit!
Thanks es 73.....RICH-WA2RQY RLUCCH2098@aol.com

Looks to me like you overbid on an as-is rig w/o cords. Should have set off the alarms!!! In all honesty, he probably got taken when he bought the rig at the estate sale (when the cords "disappeared"), bought it as a pig in a poke and honestly represented it that way when he sold it. I'd love to see the email exchange that brought about the "I'm glad" comment, just reading between the lines in all this I'm guessing that it deteriorated to that point, and didn't start there.

You pays yer money and you takes yer chances!!!

RCA sold out their land mobile operation in 83.

They were big with state agencies out east, you might start by calling Departments of Transportation in PA, NY, NJ; and ask for the chief communications engineer.....my experience is that state agencies keep old manuals/paperwork forever.....

good luck.....that stuff was built like a battleship, it should work if you can find the info.

From: rong@computer.net
Message-ID: <3c50ac0a.3507997@news.computer.net>
Source record: 48536

Hi All,

I recently (last year) bought a TS-950SDX whose prior owner evidently fooled around with the service menu's and shifted the carrier point. It's a fairly late unit, serial # 00700004 (July 98 ???), so it should have all of the latest updates as there are no service bulletins dated later than the radio. The service manual came with the radio, and on pages 192 & 196, there are references to adjusting the carrier point. On page 192 at the top of the page, it says initial setting, menu's #01 & #02, but gives no value to set them to--it only says TX display 0. I don't know what they mean by "TX Display 0". The only thing that's illuminated is the "sub display". What is the "TX Display" ???

Then on page 196, item #9, it says for the main receiver, choose menu #00, and adjust so that tone of the USB & LSB noise is the same. I've done that as best as I can, but they're not exactly the same--there's a very slight difference in pitch that I cannot correct. For the sub receiver, it says go to menu #02, and adjust for the same thing as above. That one is fine--good match.

Have any of you fooled with these settings, and if you did, what are your thoughts ??? My radio is much better now than when I got it, but something still doesn't sound right. When listening to SSB, the audio sounds much better if I narrow down the "Hi Cut" Slope Tuning by 2 notches, rather than leaving it at its widest--it should be the other way around. When the 1.8 Khz SSB filter is in, the difference is even bigger. Evidently, I'm still not centered. ANY IDEAS ???

Okay.. I've sold some stuff on E-Bay and Here that I thought was good, although I never tested it.. I always notify the potential buyer of that fact. The Visual description is always accurate, but the functionality is unknown, and that if the buyer is dissatisfied, he is always welcome to return it for a full refund (Buyer pays for return shipping this time). That's how it's done. If the buyer disagrees with your description of the merchandise, then there is some discussion. If the buyer is really pissed, and has any viable reason to feel that way.. then the seller pays for the return shipment. That's how it's done.. no questions.. no whining.. no foul..

It appears that virtually every radio sold on ebay is represented with an "as is" disclaimer.

The fact that he offered no firsthand knowledge of whether the radio worked, and could offer only second hand heresay, means you were taking your chances. If he had said that he personally used the radio, he was on the air with it every night and it had full output, that would be one thing. But the fact that he guaranteed nothing should have been a red flag that you were buying a crap-shoot.

He did nothing dishonest.

I tend to agree that you got what you paid for. An unchecked radio with
out cords. Did you maybe use some cords that were not atched to the
radio and smoke it yourself ? I have seen several people smoke their
radios by not knowing how to hook them up. Any radio that could be
about 20 years old could be working just fine and go up in smoke when
shippped across county and plugged in.

I never did see where a 20 year old rig would be worth over about 100
bucks anyway unless it was a special collectors rig.

wrote:
>It appears that virtually every radio sold on ebay is represented with an "as
>is" disclaimer.

The problem arises when the seller sells it "as is" but makes some
conflicting representation, like "it works OK." It is not clear which
one will prevail if the item arrives DOA, since he represented that
"as is" was "works OK."

In any event, you will get no help from eBay or PayPal. Your credit
card company might be a line of defense but not always.

I like to clarify beforehand what happens if it arrives DOA and like
to get a 24 hour return period. If the seller balks, forget about the
item.

Some sellers have been burned by buyers who inadvertently damage the
item and, therefore, take a hard line. For those, I won't bid much
over salvage value.

Let's face it. In the real world (as opposed to the e-world) no one
buys anything "as is" for more than salvage value unless he can kick
the tires first. I think people are paying way too much on eBay for
the "as is" stuff. So be a seller.

Anyone in UK got a KW77 for sale? Basically, can look scruffy as h*ll, dial not working, knobs missing, but wanting inside parts to be there, and transformers good. I.e. must have workability without me having to get impossible to get transformers, IF cans. When you switch on want valves to light up. Rich.

Sorry, but everybody dirties their drawers once in a while so "buyer beware". I bought my XYL an Icom handy circa 1985. It's internal NiCd crapped after just a few months and once it died neither an external NiCd nor external power worked. Icom took 6 months and $70 to fix it and it died again a few weeks later. All in all a *very* bad design! OTOH, my K-wood 75 and 2 FT470's are still working having survived rain, shock & vibration of umpteen coast to coast trips mounted on motorcycle handle bars! That's why I hadn't bought another Icom til now. When I checked the FT100 it looked like Yaesu'd had a similar "accident" so I bought an IC-706. I'll try it out as soon as the XYL will turn it loose of it. She says that being an extra she has priority on equipment use ...;o) Oy!

He didn't say it "works OK" he said he was TOLD it works okay. Big,
BIG difference, particularly since he ADDS the caveat that he is
nonetheless, selling AS IS, which implied NO GUARANTEE.

I wasn't referring to this particular case.

In this particular case, the seller could be asked who exactly told him that it worked OK -- presumably someone connected with the estate. If no one told him anything, you have him there. However, if anyone -- even an auctioneer who knew nothing and lied -- told him it worked OK, his statement is true and the buyer is stuck. It is a weak representation, but it is not nothing. Many sellers who think they are engaged in meaningless "puffing" go over the line into an actionable misrepresentation.

Salesmanship (I like to call it "marketeering") being very common, it is important to look very carefully at what is said and to get it all in writing. Part of the game is to get you excited so you overlook the lack of detail. Watch any car ad on TV and you will see what I mean.

Anyone who has dealt with home improvement contractors knows how they start to squirm as you nail down in writing each and every deliverable in detail. Almost every seller plays the game.

I bought something from a fuckhead who shall remain nameless (but advertises here) who got royally pissed off when I insisted on a power supply that was rated at what he promised -- not the lesser one he shipped that he felt was good enough. I would not consider this guy dishonest; he was just playing the game. Fortunately, the details were documented.

The key to this issue is, the "seller" stated... He bought it at an Estate Sale. HE WAS TOLD IT WORKED OK He went on to say he had no power cords to try it nor knowledge of that type of stuff. So, that in itself said BE CAREFUL..... He was making an assumption based on second or more hand information. He also said AS IS.

The buyer of the radio from the Estate sale hence the seller on E-bay, in a sense as it appears - bought a pig in a poke as my elders used to say, and passed it on.

Whether the seller was lying about the deal or not isn't the issue, having read the ad myself, I seen many red flags presented. See my post in Rec.Radio Swap if you want the full opinion as written previously on this issue.

>I did look at the listing and it clearly says that the
>radio was offered AS IS.

But it sounds as if vital information was left out. If you KNOW something is wrong with an item, and intentionally leave it out, you are misrepresenting the item, even if you throw in "as-is". The old "As-is" is used way too much and people accept it too much. Anyone using "As-is" is just saying "There's some problems with this item and I don't want to tell you what it is, because you probably won't buy it."

I've always wondered what is sold in any other way than as is.

Everything is as is, it can't be as it isn't!!

The words "as described" are better.

I will say that you need to be very wary of sellers where there is some irregularity---like no power cord--or I dont know anything about these. I love the ebay description where supposedly uniformed people give a great description of the item and then claim to not know anything about it.

I had a chance to buy a HRO 500 from a guy who couldnt find the ower cord and said he thought a guy who had been there tha day before had taken it with him. I wonder about it now===glad I passed.

The acid test is always if you can pick the item up. That does wonders for people's forthcomingness. I wanted a snowblower and answered an ad from a guy in town, who then tried to talk me OUT OF IT over the phone, saying he didnt think I needed one that big. When I insisted on coming to see it the next day, his wife called back an hour later and said it was sold. I'm confident that it had a problem and he was afraid to sell it to someone in the neighborhood.

I once worked with a young guy who was a Korean immigrant, and he told me in Korea there is a saying/proverb which translates
" THE ELBOW BENDS INWARD". I thought that sums it up, and have not forgotten it

Some new stuff has been added at www.ab7sl.com in the past few weeks....

1. Site search - the entire site is now indexed and searchable from the
homepage

2. Arizona Repeaters Page - covering all repeaters statewide
on ALL bands. Sorted by county,band and frequency.
This added some 20 pages to the site.....

3. Weather Page - shows temps for selected US cities , full weather
conditions
for Prescott,AZ and USA - World weather maps and forecasts...

4. Added a Grand Kids Photos page....they are so cute and adorable!

They are easy to deal with and have good prices, but their shipping
practices leave a lot to be desired. I bought a new IC-746 from them,
and the outer carton was almost completely useless. Because of this
the inner (Icom) box was badly damaged. I called to complain and was
told it was the fault of UPS. When I pointed out that the carton had
a least three shipping labels from being shipped around the country,
he didn't have a good answer for that. When you use used cartons,
they don't have anywhere near the strength of a new one. Thankfully,
the IC-746 came through undamaged, or I would have pursued it further.
I would still buy from them again, but if I see anymore poor shipping
practices it will be the last time.

1158. HP10544A Hi-stab Oscillator question

Newsgroup: rec.radio.amateur.equipment
Date: 2002-01-25 23:07:48 UTC
From: Tracy <thooker@psl.nmsu.edu>
Message-ID: <a2soi7$4uk$1@bubba.NMSU.Edu>
Source record: 48416

I have an HP10544A oscillator i scrounged from an HP counter. I was going to use it as a timebase. It works fine, but after it warms up, it begins to 'sing', it actually makes a high pitched noise (whine). Has anybody seen this before? Is this normal? It is sort of annoying if the oscillator is not mounted inside a box.

Thanks,
Tracy

Yes, it's the pulse width modulator for the oven. You don't hear it when
it's warming up cause it's "on" all the time. Runs about 2 KHz as I recall.
It ought to be in a box anyway to keep it out of drafts.

>done.. no questions.. no whining.. no foul..

I strongly disagree. That's NOT how it's done. If I give a cosmetic description that's accurate, and state plainly that the item is an unknown quantity with regards to electrical function, and is being sold strictly as is, the fact is that the buyer should bid accordingly. When I bid on an item with those "specs", I bid on it as though it was totally non-functional, and hope like heck that I am pleasantly surprised. When I sell something that is an auction acquisition, or part of an estate, I of course try to fire it up to see where it stands. But I also state the fact that that's as far as I've gone with it in the auction ad. The bidder then decides how much it's worth to him. It's one thing when a seller tries to be cagey with the description, or outright deceptive at the worst, it's another thing entirely to be upset when you bid working, clean prices for a condition unknown item. You always have the chance to email the seller with your questions.
With regards to taking returns: Last year I sold a brand new in the box IC 281 at auction. The rig was a gift that was taken out of the box and hooked up so that the giver could see how much I loved it, then quietly returned from whence it came after she left because I really liked the old 7950 in the shack better. (Big display, big buttons, old eyes and fat fingers!) I finally decided to sell it, so I hooked it up and took a photo of it running, as these pictures look nicer than a blank display. When the buyer got it, I got an immediate email about how I had cheated him and so on, that the rig was DOA. I thought that maybe the storage period had had some dire effect on the rig, or possible there was a cold solder joint somewhere, whatever. The rig, after all, was new with almost no burn in time. I had FedEx pick it up on my dime, and home it came. The first thing I did was to look it over. The screws on the case were galled up like someone used the biggest screwdriver they could find instead of the proper size. She smelled "hot". The end of the story was that "someone" had of course reversed polarity, apparently more than once while trying to bypass the DC line. Lots of damage, and a lesson well learned. All I can figure was that the mailman must've taken it home for an hour or two and hurt it because the buyer swore he never saw a light come on! If an auction is done on the square from the start, then the seller is under no obligation, legal or honorable, to accept it back and give a refund. I have given refunds on two occassions, once from

a buyer's mother who had put a note in with the money order that she sent to cover for her teenage son's bid on his "dream radio"; and once because the display on a rig, which had worked flawlessly for the two years I had the thing, was half out when it arrived. Still, it didn't match the description I had put in the ad, so back it came, and with no complaints from me.

I tell you fair and square what I know, or don't know, and you bid accordingly. When the ad says "as is, all sales final", you agree to those terms. This is an auction! If the box gets mangled, I'll do everything I can from my end to get a claim honored, but if you decide that you paid too much in the heat of the last 10 minutes of the auction, you still own it. If the seller describes it as a pig in a poke, don't be suprised that when you open the poke you find a pig inside, not a greyhound!

1166. Marc Robins AD6MI: Great guy, great deal, great product

Newsgroup: rec.radio.amateur.equipment
Date: 2002-01-26 02:37:17 UTC
From: Brenda Ann <servfsr@kornet.net>
Message-ID: <a2t4ov$g13$1@hiline.shinbiro.com>
Source record: 48422

Just a heads up to those in here who buy and sell. I recently purchased a Tram dual band base antenna from Marc Robins AD6MI. The antenna was in great shape when it arrived here. It was shipped very quickly, and was a real bargain, and exactly as advertised here in rrae. If you are interested in anything he may have on sale here in the future, I can assure you that you will get exactly what he says it is, and good service, too.

Hello,

I am currently studying for my novice licence and I am gettin gready to
purchase my first transceiver but I don't know what to get.
What do you recommend that I get?

How do I know that the one that I am purchasing is a good one?

Also where do I go to get a transceiver?

Thanks for the info that anyone gives.
Thanks,
John

1168. Screws for Kenwood TM-741A needed

: > by a Heathkit VF-1 VFO or a similar system. There may well have
: > been no substantive maintenance performed on this equipment.
: > Except for chirp, my code signal appears to working fine.
: > I have it off the air since receiving an official observer warning
: > yesterday.
: > Thanks for reading this, Carl, KB2KDV, cpf1@cornell.edu
:
: The usual reason for a chirp is fluxuations in the oscillator
: power supply, or in your case the VF-1. Internally the VF-1 has
: a voltage regulator tube that should keep it stable but if the
: supply voltage varies to widely, or the regulator tube is going
: bad, it may not have the stability.
:
: A VF-1 doesn't have a power supply of it's own and has
: a power plug that goes over to the Viking Challenger. Check to
: make sure you are getting enough voltage to the VF-1. On older
: transmitters the electrolytic capacitors in the power supply
: start giving up and they may need replacing.
:
: If that seems ok, chirping can also be caused by excessive loading
: of the VFO. You may want to try to lighten the load that the
: Viking Challenger presents to the VF-1 by reducing the capacitance
: that couples the two. The VF-1 has a 100 pf capacitor from the
: plate of the 6AU6. You may want to put another 100 pf capacitor
: in series with it just for a trial. This should reduce the
: coupling and the load on the VF-1.
:
: If you need it there is a manual and schematic for the VF-1
: and the Viking Challenger in the BoatAnchor Manual Archive at
: "http://bama.sbc.edu". There is a listing of voltages that
: should exist in the Viking Challenger with key-up and key-down.
: Check them carefully and of course, use a dummy load on the

: output.
:
: Also, solicite the help of someone on the air. You may not be
: able to judge the quality of your signal yourself. Another ear
: on your signal may be able to tell you something when you are making
: changes and tests.
:
: I have a VF-1 and a DX-40. Maybe I'll hear you around some time
: when I get them working. I have a SB-10, SSB Adapter, that would be
: interesting to connect up as well.
:
: Good Luck

I am in the same situation. My on-line research indicated that the
best values for top used radios were the Yaesu FT-990 and the Icom
IC-765.

You can find them on eBay, but only buy from established hams who will
take it back if it comes DOA. I was not completely happy with the ham
I bought my rig from, so I won't recommend him.

> --
> Jeffory K. Hall

I am sorry you got burned, unfortunatly because of your own poor judgement Jeffory.

If you look again at the Auction details you would have seen that the
seller in question offered the item --> "As-is". When *anyone* says something is
offered "As-is" it --> ALWAYS <-- means that the item's ability to perform
what WAS it's design-intended function IS NOT GUARANTEED - period.

When anyone buy anything, anyplace, in any venue "As-is", you are saying to the seller:
"I understand that this item is offered in a condition or status which is
unknown, and thus is therefore not guranteed, and that my exchange of
funds for saidsame item does not legally bind the buyer or
seller to any claims of liability for the same upon completion of
the transaction."

I run aftermarket sales and exchanges Jeffory. Just about all my items are
offered "As-is". E-Bay is just that, an electronic version of a merchandise
brokerage. If someone says it's sold "As-is" then you are assumed to be
in charge of you faculties, and mentally cognative enuf to realize
that you are buying the item with no claims of functionality or quality whatsoever.

"As-is" in this business is the nice way of saying: "U.F.O." or "U F-----g Own it"

About 25% of people go an bellyache afterwards because they
were too lazy to consider what their buying into in the first place.
If your not sure, walk away and I'll respect you all the more.
You'll respect yourself alot more 5 minutes later also - sorry to be
so blunt, but good advice usually is.

I'm sorry hearing about this happening to you, but I've heard it
hundreds of times also. I hope this was an educational experience
for you. Don't feel bad. We've all will be burned adleast once
during our short span on this Mortal Coil...

It would help to know where you're located when you ask where to buy a rig. If you have the money for a new rig, I strongly suggest you buy one from a dealer like Amateur Electronic Supply in Milwaukee. I've bought a number of items from them over the years, and they have bent over backwards to make things right in those instances where the item had problems. There are many other good dealers, of course, scattered around the country. If you buy an older transceiver from another ham or from someplace such as eBay, you should expect to have a problem or two, and repair services are extremely expensive these days. The rigs are complex enough that many hams aren't savvy enough to be able to identify a problem in the rig. Many others are selling the rig only because they know it has a problem or two. Don't assume that a seller is 100% honest just because he's a ham.

Since you didn't specify what you're interested in (HF, VHF, etc.) it's impossible to make any recommendations on what to buy. I suggest you take a look at the product reviews at www.eham.com for owners experiences with the various rigs.

I have for sale a very nice condition JRC NRD-535 receiver with stock filters. The NRD-535 tunes 100 - 30,000 kHz in modes AM, SSB, CW, FAX, FM and RTTY.This receiver has 200 memory locations which store frequency, mode, AGC, ATT and IF filter selection for scanning. With appropriate software the RS-232 interface allows computer control of the radio and memory functions.

$650.00 plus shipping and insurance from zip 76001.

Thanks!

Get it correct ... There are no new licenses for the Advanced , Novice
or Tech +. There are only the Technician (no code required) , General,
and Extra license being issued to new hams. The FCC is renewing the
other classes.

Hi John assume you are talking about a 2M transceiver. Well many new licensees -- buy a Handie Talky first, but you need to analyze how you will use your first rig. If you are operating mobile alot, be aware that many HT's suffer when operating off a big antenna., they were designed for a rubber duck and when you use a mag mount or external antenna some suffer severly from intermod. If you walk around alot then an HT may be the way to go.

A mobile rig can be used at home with a power supply or mobile and typically has a 35 Watt output compared to 5 Watts or 350 milliwatts for an HT.

The mini HT's will develop a lot of heat when operating full power and all HT's have a limited battery time, unless operated off an accessory power supply. Not bad mouthing HT's -- I have 2 of them, but be aware of their limitations

If you are talking about an HF rig --- see URL:
http://www.eham.net/reviews/products/14

What to buy ???? See eHam reviews. There owners yak about what the like and dislike about the various models. URL:
http://www.eham.net/reviews/

SEE
VHF/UHF hand held radios (43 reviews)
VHF/UHF Radios (222)

Where to go? Your local Ham Rdio Store --- the guys/gals there will help with selection, help program it, etc.

Ham stores across the countries are at URL:
http://ac6v.com/stores.htm#HAMSTORES

You may want to get a pricey multi band like a IC-706
http://www.eham.net/reviews/detail/63

Worked at HP Santa Clara for 21 years John, now full time Hamming - hi hi.

I am selling a Yaesu FT-26 2 Meter hand held rig.
The radio is in very good condition cosmetically but needs the Lithium cell replaced to hold memory channels.I have priced these out and they are very cheap about $6.
Ni-Cd pack FNB25 seems to hold a charge fine
Comes with manual,charger, belt clip and wrist strap.
Nice solid radio good as a backup or for a beginner.
Please e-mail me any question directly to rusty@dccnet.com
Asking $85 shipped or reasonable offers
Thanks-Russ

From: cprstn54zz@att.net
Message-ID: <3c531652.121180328@news-server.optonline.net>
Source record: 48449

Can you just swap out 572B tubes and swap in matched 3-500Z tubes in,
say, the Yaesu FL-2100Z or the Heathkit SB-200? No other changes?

Am I correct that this will almost double the power and bring it close
to the legal limits?

Hi John,
I'd echo what AC6V said. I'll also add this:
Consider your situation and what you're interested in starting out with activity-wise. If you're in a metropolitan city, VHF and UHF repeaters might be everywhere and easy to access with a HT. If you live in BFE, your closest repeater or fellow ham op might be 40, 50 or many more miles away. Now, I'm not saying that population or urban sprawl have any relation to repeaters or ham population density. I'm just saying that you should take these factors into account. Otherwise, you could wind up like myself; purchase a nifty HT as your first rig and be just out of range of the nearest viable repeater. As an extreme example, if you live alone on a deserted isle in the south pacific, don't get a UHF HT expecting anything more than mild disappointment:)
When in doubt, start small, simple, used and cheap. That way you'll get into it without blowing a lot of money on something you don't want/need. You'll also figure out what you really want, which is what you're trying to do now. Sadly, first rigs are kinda like girls. We'll steer you away from pitfalls tell you what would be great but you have to choose/live with the decision:)
I wish you the best of luck and keep asking when you can't find the answers on your own. Drop in on AC6V's website if you haven't already, too. He's a modest guy so I'll tell you it's pretty deep & wide.
Cordial 73's,
Drink, WP3JQ
P.S. Good day to AC6V. How's the book sellin'? Looks like a good compilation but my $'s are still goin' toward copperclad & ladder wire:)

Hello Renee,
As I understand the Microsoft wireless mice use the USA 27mhz CB band for the link frequencies therefore being susceptible to interference from CB'rs and possibly 10m Ham and 20m ham (2nd harmonic).

Moreover I have seen numerous complaints that the MS wireless mice suffer from a lag effect during normal use and are nearly useless for rapid mouse action such as in gaming. Most of the trouble reports on the MS wireless mice can be found in the following newsgroup

news://msnews.microsoft.com/microsoft.public.mshardware.product

That is what is stated on the FCC and the QRZ pages:

http://wireless.fcc.gov/amateur/amhow2.html
http://www.qrz.com/howtoham.html

But the ARRL page (25 Aug 2000) implies that there still
exists a "Technicians with HF" license:

http://www.arrl.org/FandES/ead/classes.html

This confusion is most disconcerting.

Source record: 48470

This is just a simple case where all the books and documentation haven't quite caught up with all the changes. Without going into all the older licenses and confusing the subject further, I'll give it a try.
There have been many changes over the years, deleting and adding license classes. And, some folks have decided to remain in their classes and are allowed to renew those licenses, though the FCC isn't issuing any initial licenses in those classes (In this case, an old Novice can keep his class but you can't apply for Novice because there's no test for it any more).
Currently, their are 4 tests [3 written tests and 1 CW* test = elements 1 thru 4]. The exam credits are as follows:
ele 1 = Technician (this is a no morse code, entry level exam)
ele 2 = Technician w/telegraphy (*this is only a 5wpm CW test)
ele 3 = General
ele 4 = Extra
It's pretty much that simple. Take one, study, take the next, study, etc, etc. As you progress, you keep credit for the elements you passed previously until you stop or have reached the highest level and wait for the FCC to change the classes again :) HIHI
I hope this cleared it up a little. It's always the simple stuff that confuses us because we expect harder problems, huh? If on the other hand, I only muddied the water drop me an e-mail.
Take Care & 73's,
Drink, WP3JQ

Some of the instructors at my work QTH tried to use these
devices..effective range was about 15 feet, though the literature
claimed a 50 foot range, and they would malfunction (with some very
interesting results ;) every time some trucker would key up his
kilowatt 'leenyar'.
I asked our electronics guys to see if the freq could be altered away
from 11 meters, but no answer yet. That was 3 weeks ago, so it doesn't
look promising.

Message-ID: <20020126200939.08355.00001360@mb-fi.aol.com>
Source record: 48467

No, the two are not compatible. The sockets are different and the the 3-500 tubes are considerably larger than the 572B tubes. You might fit ONE 3-500 into the SB200, but not two. In addition, the tube is not the whole thing. The power supply in the SB200 will not support any more than the two 572B tubes it already has installed.

I am puzzled whether this post if for a licensed amateur radio operator or a CBer?

1214. "best" HF amp?

Newsgroup: rec.radio.amateur.equipment
Date: 2002-01-27 01:37:37 UTC
From: paul friedman <pfriedman8426@mediaone.net>
Message-ID: <BRI48.28121$yC.3601762@typhoon.mn.mediaone.net>
Source record: 48469

I've read the QST and eHam reviews. I would like to add your opinion to the mix. In descending order of importance, here's what is important to me:
1) Minimal TVI, RFI
2) Clean signal (minimal splatter and minimal harmonics)
3) 40-10 all bands (translates to 12/17 capable)
4) cost (including for tube types, the cost of replacing tubes)
5) power... 500w would be just fine

I'm running an Icom 746 and don't care if the amp eats 110 or 240 volts.

Thanks for your opinions.

IMHO the best bet within the framework of your requirements would
without a doubt be the Ameritron AL-811H.

1. inexpensive new - $699 at Texas Towers
2. 160-10m including WARC bands
3. uses cheap and easy-to-find 811A tubes (4)
4. runs 800W effortlessly on 120VAC w/65w drive
5. it is the best $$$ to WATT ratio new amp on the market
6. mine is in it's 3rd year of heavy daily use - no trouble
7. at my QTH no RFI / TVI trouble either.

I had an old Heathkit Warrior amp that I re-tubed with a single 3-500z
and it played quite nicely with the lower plate supply. I then added a
3500V / 1A plate supply and it was like having a new station!!!

> Tried to use a 7 MHz dipole at 21 MHz resulting in a too high impedance.
> Could be the cable (RG-59)? Any suggestions would be appreciated.
>

Did you mean to say too high SWR instead of impedance? Since a dipole's nominal impedance is around 70 ohms, the RG-59 should have not been a factor. More likely, your 21 MHz operating area was not close enough to the 3rd harmonic of the 7 MHz dipole resonance frequency. Sometimes you have to sacrifice tuning a bit on one band to make it work on both.

Interesting....

I use the wireless mike all day long, and have the computer on and use it while operating on all bands from 10m to 40m.

It is a Microsoft wireless and I have never had that kind of a problem.... It sure does eat batteries though! I go through a two AAAs about every month and a half...

Good luck

Charles- nice response. Thorough and quick to the point.
I'm sure this will be a good start for Paul.
What do the 811A tubes sell for? I'm amazed at how much a
simple 6JE6 tube goes for. (Horizontal output tv tube used in my
Swan rig). Well over $60.

How could it be for a CBer if 100 watts is needed for the input? Last
time I looked, my CB only put out 5 watts.

I am shopping/planning an amateur station. I saw one web page that
suggested (without any details) this swap was a do-able mod. Maybe it
was a complete rebuild. Looked like a cheap way to get to a megawatt.

Didn't know you needed any licenses to ask a question or buy
equipment.

Hi ! I bought recently a FT90-R, wich, apart from the known few defaults (!?!), gives me total satisfaction !!!
BUT... there is one thing : it comes with a computer program wich allows to set all the different datas, memory frequencies, modes, etc...
This program isn't practical at all : whenever you have writen the datas, and you would like to squezze another QRG inside the list, IT IS IMPOSSIBLE !!! You have to re-write the whole damn list...
Is there any other program wich would work with the FT90-R, or is this one the only one usable ?
Thanks to answer via E-Mail...

1233. Do you have an FT-7 ?

Newsgroup: rec.radio.amateur.equipment
Date: 2002-01-27 15:15:38 UTC
From: ft7world@yahoo.com
Message-ID: <6c64035c.0201270715.4d1c1f5c@posting.google.com>
Source record: 48489

Do you own a Yaesu FT-7 or FT-7B ? or do you have useful
documentation on either of these transceivers ?

The radio is a mobile HF transceiver covering 80/40/20/15/10m (not all
of 10m avauilable of the FT-7 model). Power output is 10W on a
straight 7 and 50W on a 'B'.

I picked up one of these radios (FT-7) at a recent rally and have had
a lot of fun operating /QRP using simple antennas and powered by a
sealed lead-acid battery (all fitted into a small napsack). Best DX ?
UK to Japan on 20m, UK to Oman on 15m, UK to Kenya 80m. All 10W SSB.

So, I thought there must be other users of this 'forgotten radio' out
there ? I have decided to set up a website.

I hope to include:

Scans of articles from RADCOM/QST/CQ etc
Scans of modifications
Scans of manuals / operators guides
Circuit diagrams
etc etc

Suggestions will be welcome to: ft7world@yahoo.com

If you have anything to contribute, ie. Scans as listed above, etc.
Please get in touch, or simply send them to me direct.

I hope to have the webpage up within the next few days.

Please please, if you have some useful info pop it in the scanner and
email it to me !

Thanks and 73 !

1235. Programing problems MTX-800, MTX-810

Newsgroup: rec.radio.amateur.equipment
Date: 2002-01-27 15:29:31 UTC
From: Jim Reid <jimreid@nycap.rr.com>
Message-ID: <3C541E62.4050802@nycap.rr.com>
Source record: 48491
Cross-posted to: rec.radio.amateur.equipment,rec.radio.swap,rec.radio.amateur

Picked up a couple MTX-800 and 810's on Ebay. When I try to read code plug. I get a "Power Fault" , "Check cable/Rib" ect. When I run the software for my HT-600's or MTX-820's on the same setup, all is well. So I think my setup is OK (Right Com Port, RIB power, Interface Cable ect.) The versions of software are: MTX-800 R01.00.01(19-Oct-88) MTX-810 R02.01.00(7-Aug-92)

Are these "Boat Anchors"? Is there a way to reset the code plug? Could it be they were programed wit a newer version of software?

Any ideas???????????

Source record: 48492

This is a well-known problem that's been in the books for many years. It's partly been attributed to "end effect". I can't explain exactly what that is, but it's one of the many phenomena that generally make it necessary to determine the optimum antenna length by experiment. (The formulas get you close but not right on.) Also, realize that if you adjust the 40-m antenna so it's right at the middle of the band (7.15 MHz), then the third harmonic is at 21.450 MHz -- a bit high -- and the impedance will get bad faster as you go below that than it will as you go above that.

Hi,

I'm looking for a good condition, working HAL ST-6 modem to interface with
Model 15 TTY. (I'm working backwards from Soundcard towards smoke signals!)

Please advise details and price you are asking.

Thanks,

Jim Andrew

Mini-Circuits ZFSC-2-10G 2way splitter (we have 3, new price $70)
2GHz - 10GHz 1dB insertion loss above 3dB split, 12 dB isolation typical

$35 each + Shipping

All 3 for $65 + shipping

1240. FS: JRC NRD-535 Receiver

Newsgroup: rec.radio.amateur.equipment
Date: 2002-01-27 16:05:41 UTC
From: Michael <michaelt@flash.net>
Message-ID: <pzV48.23817$2r3.2206789765@newssvr17.news.prodigy.com>
Source record: 48495

I have for sale a very nice condition JRC NRD-535 receiver with stock filters. The NRD-535 tunes 100 - 30,000 kHz in modes AM, SSB, CW, FAX, FM and RTTY.This receiver has 200 memory locations which store frequency, mode, AGC, ATT and IF filter selection for scanning. With appropriate software the RS-232 interface allows computer control of the radio and memory functions.

$600.00 plus shipping and insurance from zip 76001.

Thanks!

Source record: 48348

I don't like the front end in the Icoms, I have a 281,21200,and 706.I can't even use 2 meters in the shack because they are desensed so bad by other VHF and UHF repeaters.In the car they work OK if you don't mind the squelch breaking around town...if I wanted noise I would get a CB.I recommend a Yaesu FT2600,it doesn't see all this stuff and still hears what it is supposed to.
This problem is probably even worse in more populated areas than here in Montana.TG

1243. F:S Yaesu FT-26 VHF Hand Held

Newsgroup: rec.radio.amateur.equipment
Date: 2002-01-27 16:45:53 UTC
From: "R.Smith" <rusty@dccnet.com>
Message-ID: <3C542EC1.9040903@dccnet.com>
Source record: 48441

I am selling a Yaesu FT-26 2 Meter hand held rig.
The radio is in very good condition cosmetically is about a 9+
It needs to have the Lithium cell replaced to hold memory.
I have priced these out and they are very cheap about $6.
Ni-Cd pack FNB25 seems to hold a charge fine
Comes with manual,charger, belt clip and wrist strap.
Nice solid radio good as a backup or for a beginner ham.
Asking-$85 shipped or reasonable offers
Please e-mail me any question directly
Thanks-Russ

1257. Re: Swap 3-500Z for 572B tubes in some amplifiers?

Newsgroup: rec.radio.amateur.equipment
Date: 2002-01-27 21:38:24 UTC
From: Ralph Mowery <rmowery@dialpoint.net>
Message-ID: <3C547350.EA6ECE8D@dialpoint.net>
Source record: 48361

No you can not do this. The power supply will not handle the extra current that the tubes need to get double the power. Also I doubt the other components will handle the extra power pushed through them even if the power supply would handle it. The component values would also have to be recalculated for the aditional power to get the circuit Q correct.

> frequency.....

That is EXACTLY what you should do- even harmonics will present a very high feed Z as the antenna is a voltage feed on even harmonics. Odd harmonics work just fine.

Most likely the antenna is too high in frequency- measure out 11' from the center on each side and clip on a 6" or so length of wire and try again- prune as necessary. There will be no effect on 40M resonance as this is still a current max on 40M.

What I do is just use a tuner in the shack to a get a decent match for
the radio. Use the least inductance setting to get a usable match. The
SWR is low enough as not to cause excess losses in the coax, so all
you need to do is keep the radio happy. Any simple tuner would work.

The range of a pair of ICOM T81A's are easily half a mile with stock antenna. The range improves with an aftermarket antenna (Comet SMA703). At 0.6 miles in our test the signal increased about 75%. The output is one watt.If you are not familiar with the T81, it is a quad band HT. Covers 6M, 2M, 70cm and 1.2 GHz. I am also able to use a repeater that is several miles away.

Good evening, Charles.

Would you mind running a test for me?

Are you able to crank your exciter power back to 5 watts or so, and drive your AL-811H with that? If so, how much power can you get out of the linear driving it with 5 watts, and is the output signal clean and clear?

I am (still) looking for a way to use the Yaesu FT-817 for mobile and portable work while still making it useable, at a reasonable power level, in the home station.

If you are able and don't mind making that test for me, at the lowest power your exciter can put out, I'd appreciate it ...

Thanks...

1266. Suggestions on very small HT

Newsgroup: rec.radio.amateur.equipment
Date: 2002-01-28 00:46:04 UTC
From: SweetMoth@webtv.net
Message-ID: <727-3C549F4C-85@storefull-2114.public.lawson.webtv.net>
Source record: 48370

I'm looking to buy a very small 2 meter HT with 5 watt capacity. Haven't been in the market lately and don't know what's out there. Less wattage is ok but would like recommendations, something as small as possible, sturdy and with a good repair record. Thanks.

1267. Re: 1.2 GHz HTs

Your comment about range may have some truth from HT to HT but in populated areas such as the SF Bay area where the person requesting this is located, there are LOTS of 1.2 GHz repeaters, some inter linked and coverage is very good. I have worked through repeaters dozens of miles away with my 220/1.2GHz HT on 1.2 GHz with full quieting.

You must be in an area with few people and few mountains or tall buildings or towers.

>...Yaesu FT2600

Has problems with low voltage dropout of programming. Friends have experienced this with theirs in mobile and are going to buy the FT-1500 [Was 149.95 in last fall's AES catalog.] to replace it and put 2600 in the house on UPS/power conditioner.

FT-2500 is rock solid though only 28 memories. I've been using this model mobile for past three years without a bit of trouble. Have been looking for another but might buy the new 1500 instead.

Hi Paul, Based on your description of wants and uses, there are a couple of amps that stand out, in particular the AL 811 or 811H by Ameritron, or the TenTec Centaur...all us 811 tubes and have the bands and ouput you desire...also they should range in price used, from $400 for an 811, 500-550 for 811H (4 tubes instead of three) and 600-650 for the TenTec 3 tuber though its not really worth any more, I think. There are many that would serve but these three will serve best and cost least...73 have fun

I have a Yaesu VX-5R that has been a great radio; owned it since
September, 2001 and find it to be a versatile unit. I recommend buying
the ADMS-1E programming system for it, allowing total programming via
the PC. This is much easier than manually entering data with the
keypad. I wish all of my radios were PC-programmable.

I have new factory fresh 3-500zg tubes for sale. These tubes are
fully tested before they are shipped. I stand behind every tube i
sell. If you would like to see some references about my tubes and
service, just go to my web site http://www.tomstubes.com
and look for the reference section near the bottom of the page.
My 3-500zg tubes are really great. I have sold dozens of these, and I
have never had to replace a single tube! As I said, each tube is fully
tested and that is the only time the tubes have been removed from
their factory shipping boxes.
The price of my 3-500zg tubes is $110.00 plus shipping. I will
warranty each tube for 6 months.....no ouestions asked....If you are
not completely satisfied with any tube you buy from me, send it back
for an exchange or refund....your choice.....no hassle.
I also have 4cx800a tubes new in the box for $190.00 per PAIR!
Thanks for your time and 73.

Not sure what you mean by "small" but my Icom T2H isn't too awfully big. The case, excluding the knob and rubber duck, is 5.5" high, and it puts out 6 watts on 2 meters. It has a real sturdy composite case of some kind.

The battery needs are fairly simple -- it comes with 8 rechargeable 1.2v nicads and a wall wart charger. Recharging takes about 15-20 hours.

I paid $139 at AES last March... There's a "Sport" model that costs even less -- you supply your own alkaline batteries.

Your best best is to go to the web sites for Icom, Yaesu and Kenwood. All their ht's are there, with dimensions, etcetera...

Source record: 48394
Cross-posted to: rec.radio.amateur.equipment,rec.radio.amateur.homebrew

Hi Group!

I would like to ask a question about my TS930S problem.
It has a terrible audio report (heavy distortion) from QSOs. The problem occurs on all bands
(form 80 to 10m) Initially I thought
it has a RF feedback problem, but I noticed that the previous owner already added the
modification (ferrite bead into the mic circuit, and also a modification in the external
speaker jack) according to the Kenwood service bulletin.
I am beginning to suspect that there may be some other problem (may be final amp stage?).

By the way, when I monitor my Tx signal (by turning on the monitor switch), the tone quality
seems to be OK. So I suspect that there may be a problem after the IF stage
because the monitor function demodulates the IF output signal. I wonder
whether you have any tips about where and how to fix this.
Your help will be greatly appreciated.
Thanks.

-AB2ND, Jungwoo Lee

What did Drink mean by that? Lessee if I can guess:

* You think you've found "The One", but you can't help looking at what your friends have.

* The ones on the magazine pages sure do look good.

* After a year or so, some guys ditch 'em and get a newer, sexier model.

* You think your performance is fine, but if all you've got is a rubber duckie, well ... you're probably just deluding yourself.

* There are some awefully fancy ones out there, but you just might be happiest with a more basic model.

* Don't forget to keep some fresh batteries around. *You* might think they'll never be needed, but you never known when you might lose power.

* those "action bands" seem pretty exciting for a month or two, but after a while they get boring.

I'd better stop - these are getting weaker as they go along. Soon I'll be trying to make allegories between a linear and Viagra. On the other hand, there sure are some hams who seem to think like that.

Ever since I started using a Maha replacement battery I have had
problems with the TH-79. I have to twist the battery to make contact
otherwise the unit won't power up. I have checked the and cleaned the
contacts but no cure.
Any ideas anyone?

Adding a bit to Jonesy's answer - the 6146W is a more ruggedized version
of the 6146B, I have been told.

A HTX-100 transceiver will drive a power amplifier of that range just
as well as any other transceiver.

Generally, a power amplifier has a sensing circuit built in. When you
are receiving, the amplifier is bypassed so that the amplifier's antenna
connector goes straight to the transceiver and you receive as if the
amplifier was not there. When you transmit, the amplifier senses the RF
from the transceiver and switches in the amplifier.

The only problem that you might have is overdriving the amplifier. The
HTX-100 has about 30-35 watts out. Amplifiers in the 100 watt range should
only require about 5-10 watts of drive to realize 100 watts out. So,
if you were using an amplifier, it would be a good idea to set the
HTX-100 in the 5 watt mode or you may have to dissipate some of the
power in a attenuator before sending it to the amplifier.

If you do run it in the 5 watt mode and then accidentially push the
power button in, you could burn out the input circuitry of the
amplifier. It's an easy thing to forget. Of course, you could go
into the HTX-100 and bypass the output power switch or turn down
the power internally.

Also, if you are thinking on using one of those cheap CB amplifiers,
give up the idea. They will probably do more damage to your signal
than if you didn't use one at all. If you want to get the most out
of the HTX-100 go for better coax and a better antenna. Some nice
low loss coax and a 3 element beam will be better than using an
amplifier.

I have a HTX-100 connected to a Hy-Gain Tri-Bander beam and it
works great without a amplifier.

SELL: Ferris Instrument Co signal generator. Vintage age. Appears to be the granddaddy of the Boonton gear as also manufactured in Boonton, NJ and looks exactly like their product style of the 1930-40's

Model: 18-D, freq range: 8 - 210 mhz, 0-1.2v RF output.

Excellent condx, has all tubes, unmodified, original AC cord, atten. pad & cable. Guess to be from the 1930's.

Best reasonable offer. Buyer pays shipping and any "out-of-pocket" packing expenses (no extra charge for packing - if we can find a suitable box - and taking to shipping point of your choice (postal or UPS).

Source record: 48307

I am looking for the cable construction details for the radio to radio cloning cable for the Icom IC-T2H. The list is $20 with shipping and I feel sure that unless it contains some funky electronic gismo that I should be able to duplicate it for substantially less. The manual describes it as connecting the speaker jacks together. These jacks are stereo so I wonder if there is some form of crossover or is it straight through? Is there any resistance pad inline or diode OR-ing? I hope to use these for emergency comms and the ability to program one and clone the other would be very helpful. If there is any aftermarket computer program that can store and upload frequencies I would also be interested.

From: radioguy <radioactiveham@yahoo.com>
Message-ID: <u5bq0upvvcf2af@corp.supernews.com>
Source record: 48309

Looking for Solid State 1260-1300mhz Amp. All-Mode 40 watts or more.

Items I have as trading material:

Icom 970H multi-mode 144-148mhz / 430-450 45 watts on 144. 35 watts on 430. Built in Power Supply and Elec. keyer. SM-8 Mic with 2 leads.

Yaesu band modules for FT 736 50mhz, 144mhz, 220mhz,440mhz
Yaesu band modules for FT 767 50, 144,440

Mirage UHF All Mode Amp Model D 3010 100-110 watts out on 430-450 with 25 watts drive.

2 (two) KLM 432mhz 30LBX antennas. (30 elements on a 22-23 foot boom)

SGC 237 remote antenna tuner

These items are for trade only for a 1260-1300mhz solid state amp. Not for sale.

Photo's can be sent if requested.

Thanks

Tom radioactiveham@yahoo.com

1307. Kenwood TK-340 help!

Newsgroup: rec.radio.amateur.equipment
Date: 2002-01-29 00:37:47 UTC
From: John Reed <jreed@NOSPAM.thor.atl.ga.us>
Message-ID: <u5brmub5df7s9c@corp.supernews.com>
Source record: 48311
Cross-posted to: rec.radio.amateur.equipment,rec.radio.swap

I apologize in advance for the cross posting.

I purchased two TK-340's (UHF commercial version of the TH-45 - or similar anyway) in an EBAY auction.

They work great up in the 450-470 range.... and I can get them to program down into the 440 ham band.

Here's the problem:

The radios are darn near deaf in the 440 realm. I can program in some repeaters - and hear my key them in another receiver, but the radios themselves do not hear anything. They can hear each other and my ham HT's in the 440 radio, but that's only because they are right next to each other. I'm thinking I need receive VCO realignment.

Several years ago, I bought a junk TK-340 and a gentleman on this list had a service manual and sent me a copy of some information in it. (I wound up giving him my junk radio for the cost of shipping).

If that guy is still out there, or if anyone else out there can help, what can I do to get these bad-boys to be useful in the ham bands.

I'd like to get a usable 440-470 range out of them if possible - so I can use them on my employer's UHF low power business band channels, plus ham, and possibly GMRS.

Feel free to reply to me on the newsgroup or in private email - just remove NOSPAM from my email address.

Thanks

John, n4tii

1314. Yaesu VX-5R

Newsgroup: rec.radio.amateur.equipment
Date: 2002-01-29 03:56:36 UTC
From: SweetMoth@webtv.net
Message-ID: <17055-3C561D74-37@storefull-2111.public.lawson.webtv.net>
Source record: 48319

Does anyone own one? I looked at it today, it goes to 5 watts and is quite small, casing appears sturdy. Any opinions would be appreciated.

1315. VHF - UHF or 6 mtrs?

Newsgroup: rec.radio.amateur.equipment
Date: 2002-01-29 04:09:02 UTC
From: Tom Donohoe <tom@donohoeusa.com>
Message-ID: <3C56205E.E2E0542A@donohoeusa.com>
Source record: 48318

Hi Folks,

I have been using a couple of VX-1s to communication in very hilly country, point to point between the 2 HTs.

I am wondering if anyone has played with a VX-5 on 6 meters for local point to point communications in very hilly country?

I have sold the VX-1s and thinking about the VX-5....

All info greatly appreciated!

Tom

Not trolling, just stating a fact. But, you're right.. I did a bit more research. The FVS-1A is a newer model of this synthesizer... the FVS-1 lists for $38. Perhaps I should have e-mailed the seller directly with this information instead of posting it to the NG, since I was really only letting him know that he may not get many interested parties at that price. Presumably anyone looking for one will have checked with the various amateur supply houses already.

1321. NEED PROG CABLE FOR IC-R2

Newsgroup: rec.radio.amateur.equipment
Date: 2002-01-29 07:37:25 UTC
From: n9mxt1@aol.com
Message-ID: <20020129023725.12498.00001051@mb-mn.aol.com>
Source record: 48325

Hello,
I just bought a IC-R2 Receiver and would like to get the programming cable to link it from the unit to the PC (DB9 - Stereo Plug). I don't wish to spend the $40 all these commerical sites are selling it for. I was wondering if any has this cable they wish to sell or has aftermarket cables for cheaper? If so please let me know...

Thanks so much and hope to hear from someone soon.

REMEMBER its the cable that allows me to program the IC-R2 from the handheld to PC.

Jeffrey - N9MXT1@AOL.COM

Message-ID: <1t8d5ucksavkcsbh1972h42ef0mesb2nh2@4ax.com>
Source record: 48332

I am looking for the cable construction details for the radio to radio
cloning cable for the Icom IC-T2H. The list is $20 with shipping and
I feel sure that unless it contains some funky electronic gismo that I
should be able to duplicate it for substantially less. The manual
describes it as connecting the speaker jacks together. These jacks
are stereo so I wonder if there is some form of crossover or is it
straight through? Is there any resistance pad inline or diode OR-ing?
I hope to use these for emergency comms and the ability to program one
and clone the other would be very helpful. If there is any
aftermarket computer program that can store and upload frequencies I
would also be interested.

I disagree. I've heard literally 100s, perhaps 1000s of illegally amplified CBs while driving the interstates over the past several decades and most sound as good or better than "barefoot" CBs. All bad ones exhibit the same symptoms - distortion caused by overdriving - that we hear in DX pileups on the Ham bands. IMHO the signal-wrecking poor quality of these inexpensive amp's is an urban legend and one is doing the FCC's own work liberating them from a life of crime (grin). Most "CB" amp's will work FB *if* the exciter's output is lowered to under 4 watts as Martin recommended.

Ummm ...

* If you know what buttons to push, you can achieve some impressive results.

* There are some buttons you'd damn well better stay away from.

* There are lots of ways to connect your antenna, but the good old bayonnet mount is the best.

* Learn this fast, and learn it well - you gotta Listen, Listen, Listen!

* Everybody has a hand-held, even if they don't admit it.

(Geez, NOW I'm getting cheesy.)

No, but I have tried 10 meters. Like 2m, 10's ok til you get a hill
between you then it fades (That's why we have repeaters). I gotta assume
6m would be the same. 40 or 80 maybe?

1332. Newbie dipole/coax question

Newsgroup: rec.radio.amateur.equipment
Date: 2002-01-29 14:38:35 UTC
From: cprstn54zz@att.net
Message-ID: <3c56ab06.7862718@news-server.optonline.net>
Source record: 48336

My 50 ohm coax rg-8X feed line (into a dipole) radiates substantial RF (as measured by a Micronta field strength meter) at all frequencies, which is carried back into the radio chassis. Power readings are erratic. The problems go away when a dummy load is substituted for the dipole. My shack is 30 ft from the dipole and I get no discernible readings on the Micronta away from the equipment.

I know that a dipole is balanced and coax is unbalanced. I just don't know what to do about it, other than using ladder line, which is impractical for me.

I have tried the ARRL-recommended choke coil (9 turns of the coax in a 6" circle at the feed point) without any observable change. Similarly, I grounded the radio chassis to my house DC ground with no observable effect.

My dipole came with an SO-239 fitting. Is there a balun that solves this problem? I couldn't find one that seems made for this job. Will ferrite cores on the coax help? Is some RF from the feed line unavoidable with this set up? If so, am I OK as long as the mic doesn't "bite"?

They are saying on-the-air they will be QRV for 8-10 days from their start date which was 28-Jan-2002. So based on that info they should be on-the-air till 05-Feb to as late as 07-Feb.

Weather conditions can change all that as well as equipment failures (generators,antennas) so it is advised to snag them as soon as one can.

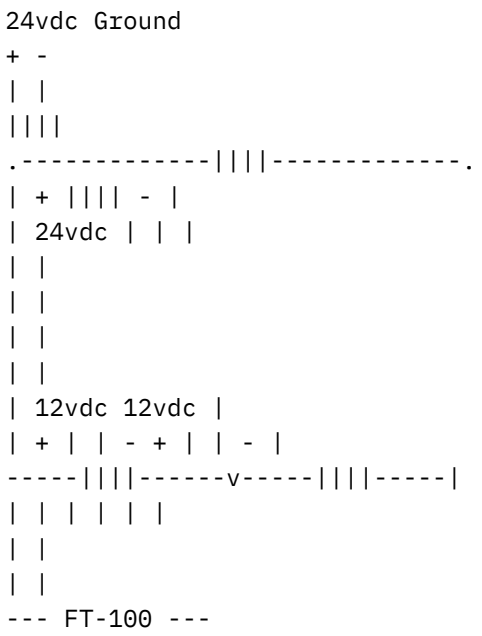
A friend of a friend is a ham in Africa. His vehicle has a 24vdc system. The battery has no taps to divide it into 12vdc series.

He needs about 20A to run his FT-100. Can he put 2 12v car batteries in series and tap from the center connection to get the 12vdc he needs?



It seems too easy. So before I show him how to blow up his radio, I thought I'd check with you guys as a sanity check.

Well, that was my first thought. I couldn't find any that go between
the feed line's PL-259 and the dipole's SO-239. Will the balun still
work if I take the two balaced-side terminals and fit wires from them
with a PL-259?

It would seem more logical to run wires from the balun's balanced side
to the dipole sides, but the dipole is a slinky and is made of steel,
making a good contact problematic.

1339. CliffDweller II SWR question

Newsgroup: rec.radio.amateur.equipment
Date: 2002-01-29 16:39:24 UTC
From: cprstn54zz@att.net
Message-ID: <3c56cfcd.17277203@news-server.optonline.net>
Source record: 48342

Has anyone (other than the sellers of this antenna) been able to get
SWR readings under 6.0 using a coax feed line at any frequency?

Ken

1340. WTB: Card Extenders and Manuals for Commercial HF RXen

Newsgroup: rec.radio.amateur.equipment
Date: 2002-01-29 16:57:39 UTC
From: mikea@mikea.ath.cx
Message-ID: <7wA58.16553$cA5.2342339738@newssvr16.news.prodigy.com>
Source record: 48343
Cross-posted to: rec.radio.shortwave,rec.radio.amateur.boatanchors,rec.radio.swap,rec.radio.amateur,rec.radio.amateur.equipment,rec.radio.amateur.swap

I just got three HF receivers "as-is", with service manuals,
which will make things _MUCH_ easier. They're:
o Debeg E2000,
o ITT-Mackay 3020A, and
o Racal 6217E.

I want to buy operator's manuals for all three, and would like
to buy card extenders for all three, as well. Buying them will
be _much_ nicer than making my own.

All are "as-is" and need work, and the only way to do useful
troubleshooting is with card extenders. I _might_ be talked
into swapping the ITT-Mackay and its manuals for operator
manuals and card extenders for the other two, plus a bit. It
depends on what the extra bit is. A "10" 75A4 or 51J3 would
certainly do. ;=)

I'll be happy to hear from anyone else who has one or more of
these receivers, or experience working on or with them.

Yes, boatanchor folks, these don't have glowbottles, but they're
of the same general era, and you folks know me, and I know you
might have some of these things ratholed.

If you are using that slinky thing for a dipole, I have never heard any positive comments about it on this or any other newsgroup.

Why don't you just build a normal wire dipole? A 10-meter job would fit your constricted space, most likely. Even if you have to bend the legs, it will still work. Just keep adjusting the length of the legs until the swr is where you want it. You'll probably do better than the slinky, and your choke balun might do the job it is supposed to do, keeping rf from flowing outside your braid.

Check contacts on the radio, clean off if needed. Also, if I'm correct the MTX800 software and the MTX810 software are not the same. The MTX800 will only do trunked, in comparison to the MTX810 "classic" which will do both conventional and trunked. Good luck, if you have any other questions drop a line.

I have for sale a very nice condition JRC NRD-535 receiver with stock filters. The NRD-535 tunes 100 - 30,000 kHz in modes AM, SSB, CW, FAX, FM and RTTY.This receiver has 200 memory locations which store frequency, mode, AGC, ATT and IF filter selection for scanning. With appropriate software the RS-232 interface allows computer control of the radio and memory functions. It is not a "D" model.

$600.00 plus shipping and insurance from zip 76001.

Thanks!

From: dewa7zpu@aztec.asu.edu
Message-ID: <bd0cb289.0201291036.3d9842fd@posting.google.com>
Source record: 48248

Hello,

W7ASU at Arizona State University received some donations of a Yaesu FT-101 and a FT-901 but need the power cords to put them on the air. Both use 12 pin Cinch Jones type connectors, with internal jumpers, but they are slightly different sizes. I believe that the orientation of the pins defines the connector type though:

```
- - | | - - - -
- - - - | | | |
- - | | | | | |
```

FT-101 FT-901
female female

Yaesu still sells these as complete power cords, but the AC & DC cords for both radios come to over $100. So, does anyone have some of these connectors in their junk box that they'd offer to the club at used prices? I will build them into power cords and donate them to the club.

Thanks and please reply to:

Bob, the slinky is only temporary and to help me figure out where to
put my shack when I install my Alpha-Delta DX-CC outside. I am coming
to believe that no one has ever gotten the CliffDweller to work.

I was hoping to learn if I could get away using a third floor bedroom
40 feet from where the DX-CC was to be situated -- i.e., without an RF
ground, but with a DC house ground. Apparently, nothing I experience
with the CliffDweller will carry over to anything else. Between the
RF it seems to be pumping into everything and an SWR I can't get below
6.0, further fiddling with it would appear pointless.

So I guess I will install the DX-CC outside and attach a real long
piece of coax running in and out of windows so I can try a few
different shack locations without drilling any holes in my walls and
floors.

I'd just check the ground for your house wiring, making sure the ground rod and wire running to it is in good condition, and then depend on the 3rd prong in your wall plug to provide a decent electrical ground. With a balanced dipole like the dx-cc, you shouldn't have any rf grounding problems. If there's any stray rf on your coax, just use your choke balun.

Go ahead and experiment with different locations. In a 2 story house I was in, things worked out a lot better on the ground floor than the 2nd. But every house in different.

Good luck...

Does anyone know anything about a B&W ACC-1? It appears to be a
center insulator for a dipole with an SO-239 connector on the bottom.
I was wonedring if anyone knows if this unit contains a balun or not.
TIA.

Chiming in a little late, but I've dealt with Austin, ordered a part they didnt have in stock. Recieved a phone call in less than 18 hours from placing the order, offering to offer a similar (and $2 more expensive) part for the same money. Item was recieved days later, all went very well. I'm very pleased with them.

I was using mine when I wrecked on my bike. The little HT slid 40 feet
on it's face on concrete. There were a few scratches on the frame but
none on the LCD display! Turns out the display is slightly recessed.

Other than the few scratches on the frame, there was no damage.

Man, this is one tough little HT!

Ken,

How would you rate the battery life at full power?

The RX dynamic range? (do you hear a lot of IM "grunge" if
you get into a strong signal environment?)

RX audio output level and quality?

My last battery pack for my trusty old FT-470 has essentially
"gone south" for all practical purposes, and I'm trying to decide
whether it's worth buying replacement batteries or just biting
the bullet and getting a new HT ...

Thanks in advance for your views ...

I suspect part of your problem is the coax is picking up radiation from the antenna. Unless the coax is located where the fields from each half of the dipole exactly cancel, some pickup is inevitable.

A balun at the point where the coax connects to the antenna will do nothing to correct this type of pickup. Try a choke-type balun closer to the rig, for example, where the coax enters the house.

It won't be the radio that blows up - it will be the batteries.
Actually, this circuit will work fine from the radio's point of view;
the problem is recharging the batteries while they are in series. The
one which is fully charged is not going to like having full charging
current for the other one forced through it.

For some low-current application this might work, but not for a high
current app like a 20-amp radio.

I have a Radio Shack Model PRO 2025 16 channel programmable mobile scanner.
Covers
29-54, 136-174, 406-512 mhz

One of my buddies messed with the DC input so it would be powered all the
time. And now it doesn't work.

I just have the scanner no mounting bracket..

$25 shipped free in the CONUS

exactly.

They sell special converters for this purpose, eg:
http://www.backwoodssolar.com/Catalogpages2/wiring2.htm
and go down to "voltage converters". Rather pricy, and if you need
20amps, really pricy.

Cheaper if you can find a surplus buck converter... Lucent made some
nice modules along those lines (don't know if any had a 24v input).

My favored approach would probably be to use a 12v battery to power
the rig, and a homebrew charger to keep that 12v charged from the 24v.
The 12v battery is only needed to supply the 20amp surges (during
transmit?) and the charger only needs to supply the average current
needs, in order to charge and keep the 12v fully charged on average.

I very much like mine. It is rugged. The battery life is a little
shorter than I would have hoped (will even drain when off if the
temperature display is left enabled, but it may be turned off as an
option). I even bought a second (silver), with a clone cable, for my 13
yr old son when he recently earned his license.

I don't think you'd be disappointed with one.

a separate battery kept charged by a voltage regulator chip set to 14.4 volts off the 24V point sounds like the best bet.

I have to agree. Before I installed my FT900 mobile, I was using a Titan
10m all mode, pretty darn close to an
HTX100. I used it to drive a Palomar 225 amp with consistent 59 reports and
with many unsolicited compliments on the signal strength and punchy
modulation. I almost regret taking it out. Antenna by the way was a Wilson
2000 Trucker. Not trying to toot my own horn here just letting the original
poster know that one persons opinion is just that, an opinion. Best advice
is to try it for yourself and judge by the reports you get. But don't
overdrive the amp. Before I got my settings right, mic gain on the radio at
12 o'clock and D104 mobile mic just cracked open, I was getting reports of
splattering. After some on the air tests with some gracious hams, I got
everything set right and was perfect after that.

Hi Ron,

Haven't we discussed various aspects of the SDX in the past? Your name sounds quite familiar...

Anyway, this is my first visit to the group in probably over a year... so I may have missed a lot. If you would send me an e-mail explaining what symptoms you observe on the SDX that lead you to determine that the "carrier point" is off, I suspect that I can provide you with the necessary guidance.

Regards,

Keith (KS9C)

My VX-5 is more compact, has 6m, and Yaesu has adapters allowing use of
the 470 family of headsets/mic's, and battery life seems better; but
OTOH the 470 receives both bands simultaniously and cross-band repeats
(The VX does not). That's why I'm keeping both!!

Well, I am glad you had good luck with your amp. You are correct that one persons opinion is just that, an opinion, and you are welcome to yours. However, like you, I did not express an opinion that was picked out of the air. I did try it myself and the results were disappointing. I wish that my experiences were as successful as yours.

Maybe it's the engineer in me? I tried several units and looked over many more designs and none seemed to be acceptable. I have not looked into the Palomar 225, so it may very well be suitable for use, but my past experiences make me a skeptic. I don't have any of the units left, except for one small one. I got rid of them after I decided (again, my opinion) that they weren't very useful. The little one I kept to use as a amplifier for a QRP CW rig. I don't have it handy so I really can't even tell you the name of it. It needed a little work to move it away from the 26-30 MHz range that it was designed for, and to clean up the output a little. 1 to 2 watts in, 30 watts out. Works out nice at times when QRP just doesn't seem to cut it.

But both of you agree, as do I, that overdrive is going to cause superious emissions. This can be the case with any amplifier, but these units seem a little touchier than they should be. IMHO, for anyone without the proper knowledge on connecting, using, and testing these amplifiers, I still do not recommend them. Since the original poster didn't even know if the rig would work with an amplifier, I thought it best to discourage the use of one.

On the front cover of the owner's manual for a late 1970s Hallicrafters HCM-270 CB radio, it states "Hallicrafters Company, Grand Prairie, Texas". I was not aware that Hallicrafters ever had a location in Texas. I thought they were in New York. Anyone have info on this?

Anyone have info on 1970s Hallicrafters CB radios? Was this some kind of "comeback" attempt, or did someone assume the name, or what?

original poster here...
thanks for the responses, the last poster said it all when he said that I
didn't even know if the rig (HTX-100) would work with an amp. I'm pretty

inexperienced as a ham and not a electronics tech either. I did like the advise about the good antenna and good coax. Thanks, N7WRK

I saw that one on their web site. I have two of these and both are in the original boxes. The part number is written in ink on the box, so it may have been a mistake made by the store where I bought them. But then, these have been laying around for a long time, so they could be old, discontinued models. Thanks for the help.

As stated by Chuck Dachis in his book Northrop was producing para-military eqip. much of it in El Paso, TX. For all practical purposes the last Ham radio item produced by the Northrop/Hallicrafters was the FPM-300 in 1972, and a few accessories through 1974. There were also some CB units and AM/FM sets of Japanese origin relesed under Hallicrafters name. At this point Northrop/Hallicrafters turned over to its partner, Wilcox. Then on On Dec 4,1975 Wilcox sold the Co. to Braker Corp of Dallas TX and they moved the supplies and biz to Grand Praire, TX . They set up shop with some former Hallicrafters employees of the late 60s and released a few more CB and other Japanese and Tiawan produced radios threw them. Then Braker went belly up around 1980. Then other aquired the Hallicrafters name.

For sale. Icom IC-R3. It's new; it's a scanner; it's a spectrum analyser; it's a television; it's hideously complicated; it's been used once but sworn at many times.

I can't get on with the wretched thing. It obviously needs a good home where its myriad functions and daunting handbook, which weakened my will to live when I first opened it, will be appreciated. The user manual would've been easier to understand and a lot shorter had it said what the bloody thing doesn't do.

Okay -- buying it two weeks ago was a mistake. I admit that. Rather than leave it languishing in its box, it's for sale at nearly half its purchase price to anyone who feels that their uneventful, cosy little humdrum life needs fulfilling with a real challenge. Any UK-based takers at GBP250?

Dearest Middlefinger,

Please learn to post correctly to Usenet. I.e. Add your points
immediately below reposted articles that have been trimmed to salient
points.

I know Outlook Express users rightly consider themselves exempt from the
appropriate RFCs because scrolling and snipping is such an
intellectually challenging exercise that few are equal to, but if you
could at least give it a try...

It means moving your mouse about. It can be done if you apply yourself
and I promise that it won't bite!

Hello, I bought a new CAT700 controller a few months ago and never hooked it to a repeater. It has the optional 16 track DVR digital voice recorder. It has the Windows software programmer option. It is in the optional rack mount housing. It is like new! Paid $780. Will take $550. You can see it at their website:http://www.catauto.com/cat700.html
Thanks, Bob

>from DOS - before the system boots up Windows.

It's useful not to have Win 9* load automatically when the autoexec.bat
and config.sys files have been executed. To do this, merely change one
line and one character in the MSDOS.SYS file (root directory) to read:

BootGUI=0

The last character is a zero.

To load Windows one merely enters WIN<enter> at the DOS prompt. Just
like the old days. Nothing really changes.

Thanks for the various suggestions -- here and by email.

I had tried most of them without success when for the hell of it I changed from my new Astron SS-30M switching supply back to a large storage battery. Lo and behold, no significant RF any longer radiated from any of the equipment -- only from the antenna feed line and the 12 volt feed lines (back from th radio, no doubt).

Why would a decent switching supply that is supposed to have "EMI filtering" pump so much RF into my radio? If the dipole antenna were pumping RF into my house DC ground as well as the 120 volt supply, would the Astron (without a separate chassis ground) be able to filter it out?

Assuming I need an RF ground (that I can not provide), what else can I use? Should I choke the power feed to the Astron? Or somehow filter its output, with, say, a capacitor across its 12 volt output?

Ken

Let's turn the question around. If it were a decent supply, would
it be putting out all that QRM?

: Assuming I need an RF ground (that I can not provide), what else can I
: use? Should I choke the power feed to the Astron? Or somehow filter
: its output, with, say, a capacitor across its 12 volt output?

Yes to both. You may also find it necessary to enclose the Astron
in a grounded shield box, with feedthrough capacitors for power
in and out. And choke the output, too. Ferrite toroids inside
the Astron, _as_close_as_possible_ to the devices from which the
output is taken, may help.

Also choke the 12V feed lines at the entrance to the radio, if
they radiate while the rig's on battery. The only thing that
should radiate is the antenna. You may want to choke the feed
line, too, to eliminate common-mode RF. There shouldn't be any.

I used to own a FT470 and the VX5 does a bit better on battery life.
It also does not get so hot transmitting on high power.

Source record: 48157

I must have been lucky the first time Martin! I got ahold of the amp thru a trade on my HTX242 2m rig which I had 2 of sold I dealt one away for the amp. I decided to put the Titan in the car instead of the local 2m so figured an amp would help my signal. First thing I did was throw the Titan on the bench and realign the transmit side. I didn't turn the RF power down (it would peak at 25W) because I wouldn't be using the amp all the time. But I did adjust the modulation so it never exceeded 100%, even with the Astatic D104 mobile mic I was using. As I said in my first post I was told I was splattering 10 kc's wide, so I did some on the air tests with a few hams, and finally settled on a suitable mic setting that gave me good output without overdoing it. But you are right, these amps are designed for low drive power, so if you just go hooking the thing up blind you are not going to get good results. If you are still looking for a 10m amp, check out the Palomar 225's. I would rate the construction as excellent and they put out a pretty clean signal. Mine did anyway. And there good to blast the truckers out of their seat when the need arises!

73,

Max

I have for sale a very nice condition JRC NRD-535 receiver with stock filters. The NRD-535 tunes 100 - 30,000 kHz in modes AM, SSB, CW, FAX, FM and RTTY.This receiver has 200 memory locations which store frequency, mode, AGC, ATT and IF filter selection for scanning. With appropriate software the RS-232 interface allows computer control of the radio and memory functions.

$600.00 plus shipping and insurance from zip 76001. Domestic shipping ONLY!

Thanks!

If it's bigger, then it may help you hear further, thereby increasing range of your radio in a 'technical' kinda way.
What I find interesting is the 'stinger' matching piece on top. I'd bet money that even at 1Kw, it'd become a bright orange piece of flaming metal. 15kw?.. I suppose that's a safe bet, since who's going to try it at that power??...

1415. Install help : Icom 2800 in a Ford Explorer

Newsgroup: rec.radio.amateur.equipment
Date: 2002-01-30 22:48:33 UTC
From: Ryan <Ranger__101@hotmail.com>
Message-ID: <5L_58.1871$I5.146208@bgtnsc05-news.ops.worldnet.att.net>
Source record: 48168

I have an Icom 2800 and am working on plans to install in in a 97 ford explorer. I've got the extension cables to add distance from the radio to the control head.

A good tip for any one is the Mic cable uses standard Cat 5 cable and a connector plug from radio shack works there. I stopped and got 6 conductor telephone cable to increase the range on the control head and will try that out too. It sure beats the cost of the cables from Icom.

Any good suggestions on where to mount the control head, I was thinking of mounting the radio in the back storage area where the jack is stored.

Thanks
Ryan

Most of the glory years of Hallicrafter's were spent in the Chicago area. As I remember in the 50's National was in Malden, MA, Collins in Cedar Rapids[where Rockwell Collins has a significant presence today] Hammarlund was in Mars Hill, NC [I thought they originally were in NY.] Johnson Viking was in Waseca, MN, Globe King in Council Bluffs,IA [and associated with World Radio Store(Leo Meyerson). There was a small pioneering SSB firm called Lakeshore which was making SSB gear before any on the biggies...it was in my hometown of Manitowoc, WI. Their chief engineer was one of my hamming mentors when I was a kid, just licensed in 1956 at age 13. He later went with Gonset.

I need to find an IBM SCSI CD with the mounting kit for an IBM PS/2 85
(9585) server. Really interested in setting this up with Linux and a bunch
of DOS ham radio programs.
I might have to opt for an external parallel or serial CD but would prefer
the real McCoy IBM internal SCSI drive.
Anybody have one or know where I might find one?

Seems to be an attractive price for most CB related gear.

Sure I am a fan of a wide bandwidth antenna, but I consider looks as well.
You should have seen the looks I got with the BB3 screwdriver mounted on the
back of my Intrepid! Least I had the sense to paint it to match the car!

At the risk of shocking our colonial cousins, Usenet is a global
community with one set of common sense, easy-to-follow conventions,
designed to ensure that its essential forum nature is preserved
for people to freely exchange views and comments in a manner
understandable to the majority. Without conventions in communication we
would never be able to communicate. Usnet's conventions were evolved
primarily in America.

Netiquette Guidelines

3.1 User Guidelines

3.1.1 General Guidelines for mailing lists and NetNews

If you are sending a reply to a message or a posting be sure
you summarize the *original at the top of the message*, or
include just enough text of the original to give a context.
This will make sure readers understand when they start to
read your response.

Since NetNews, especially, is proliferated by distributing
the postings from one host to another, it is possible to see
a response to a message before seeing the original. Giving
context helps everyone. But do not include the entire
original!

One problem is that many of the upside-down posters don't bother
to trim attributions; they stick their comment at the top and
leave everything trailing below so that one is never sure what
point in a multiple attribution repost they're actually responding
to.

The considerate poster, and there are many on these newsgroups,
will show a trimmed attribution and his or her comment below
after a white line separator.

You've no idea of the havoc that upside-down postings causes with text-
reading programs for the blind such as JAWS.

Visit one of the more academic newsgroups in which posts are
frequently responded to point by point, and you will see just
how important chronological posting is.

Does not look like it...
I saw one of these amps last year...
Although very illegal, I found it very interesting that someone
would go through so much expense to run this kind of power on 11 meters.

The one I saw took the whole rear of an enclosed pickup truck.
Out of curiosity, this guy proudly showed it off, and showed me
his output on a Bird Meter. He was running a Amateur rig on 11 meters
to drive it.

There are people that run that kind of power, although generally not on
a day to day basis.

A standard whip handles 1 KW without getting hot. No idea what would
happen if you fed it with 15 KW.

Source record: 48185

Ken, You should have NO, NONE, ZERO, NADA, radiation from the antenna feedline OR the 12 volt feed lines!!! You have an antenna problem!!

I can't read the history of this thread, been off USENET for more than a year.

If you are using a balanced antenna, dipole, yagi beam, log periodic, etc; you NEED a BALUN at the antenna to feedline interface to keep RF of the FEEDLINE. Keep your feedline at right angles to your antenna for as long a distance as possible.

If you are using a vertical antenna you need a choke balun to isolate the RF fields under the antenna from coupling to your feedline.

It's possible that your antenna is TOO CLOSE to your house or house electrical wiring.

I run 1000 watts on 80/75, 40, 20,17, 15, 12 and 10 meters with no feedline radiation.

Please get in touch with a local ham who has good antenna experience and have him/her help you.

73,

Deacon Dave, W1MCE
Manager, Textron Antenna Range, retired

I wonder what the chrome does for RF skin losses? I also remember someone (W8JI ?) doing an analysis of what is wrong with using a large center mounted
coil.

BWAAAAA-HAAAAA-AAaaaaa!

Riley *WHO*!

The FCC, and Riley can't find their asses with both hands - how in hell can they ever HOPE to find a
blatant CB outlaw, when all they have to go on is a 8 element CB beam in full view up 80 feet or so,
and an amplilier that dims the lights of the entire east coast every time he keys up...

I mean, after all, the FCC and Riley AREN'T magicians ya know... :-(

This is getting a little confusing. In your original post, you said your feedline was radiating, coming off a slinky dipole, but made no mention of your equipment radiating. You also said when you switched to a dummy load, the radiation stopped.

Maybe you should just put up your real antenna, the alpha delta thing, pick a location in your house for your station, and go from there? It's getting a little hard to decipher what's what, or whether the power supply is really the problem.

Pete,
The 'problem' with using a center mounted loading coil are
the resistive losses of the coil (common to any loaded antenna),
and the mechanical problem of mounting the coil. Depending on
the frequency used, you end up 'eating' the resistive losses,
that will happen with ~any~ loaded antenna no matter if it's
base/center/top loaded.
The 'chrome' shouldn't make any appreciable difference to
'skin affect', unless the metal is heated to the point of the
chrome loosing it's contact with the steel core. Of course,
the corona discharge will probably 'chew' the antenna down to
the coil before that happens.
The 15 KW claim is pure 'horse-hocky' (to put it politely),
but there are people stupid enough to do what's necessary to
run that much power mobile. You can tell who they are on the
highway, they're the ones who drive the 20 ton alternator with
wheels on it...

I had a friend who was working at a trucker/bd stop in Arizona. He
was putting amps together, mobile and SB200's, and altering the meter
shunts to reflect high power (KW or so). He would set them to run no
more than 30-40 watts. Made a bundle! Selling them for $1000 plus!!

He also made mirror antennas (phased and high gain ...[20dB???]). He
was getting 300+ for those and paying less than 40!

I actually worked in the Grand Prairie Plant then, dam what a bunch of screw ups, they seamed to have some connection with Peterson Scanners also, one of the first scanners on the market. They keep building some old gear for the military and the only engineer they had tried to develop a CB ,and keep having problems with the modulator circuit, He was a Ass hole from the north east and hated Texas. They tried to get into the fire alarm, antenna market, and what ever else came in.

Just curious. Has anyone who signed the petition received any grief from eBay? They accused me of using "contact information" (I used a first name) when I posted feedback for someone. I had this guy's name well before I contacted eBay for personal information (the buyer failed to pay....4 auctions in a row to date). And my comment was available for viewing for some time now without anyone saying a thing about it. Three hours after I sign the petition....BAMMM!

I ripped back at them big time with no response so far. They have 24 hours to respond or the relationship is over. Needless to say, I'm coming back to the newsgroups and maybe will start trying Yahoo's auctions.

The chrome IS nice. Nice looking. I think that heavy chrome plating resonates in the American psyche with the strength and purity of the 1950's when chrome was thick and cars were heavy and power was POWER. It looks like it could handle 15,000W with chrome to spare. I can just see that baby on a dark night glowing orange and blue blowing out neon lights as it cruises down Main. WOOWEE! HOT DAMN! We're smokin' now!

I think it's worth $150 just for decoration. I'll take two. One for each mirror. That means 30,000 Flaming Watts of ....GREAT BALLS OF FIRE!

Doc, if you supply the alternator, I'll supply the pickup and together we'll make internet history. You drive and I'll take the video.

Putting up the real dipole involves installing the center connector
near the top of a 40 ft. high chase (wood chimney). I have to rent a
ladder that big and don't intend to haul my 240 lb carcass up a 40 ft
ladder twice. So I am trying to address all other problems first. I
was initially trying to figure out if I could use a desirable
third-floor location (without RF ground) or be stuck in the basement
(with RF ground). I am also concerned that even the good antenna on
the chase will still pump RF into the house because inside the chase
are three vertical grounded galvanized flues.

I have several problems. Even using a battery for the power supply,
the feed line is radiating and I have an SWR of over 6.0. Chokes at
the antenna and at the radio have no effect. Shielding the coax (with
aluminum foil) within 20 ft f the antenna also did not help.

I will try a balun next. BTW, Alpha-Delta says I don't need a balun
with the DX-CC -- that the coax choke is more effective and efficient.

With the Astron SS-30M power supply, the equipment also radiates
substantially. I don't know if this is RF at the broadcast frequency
or some other frequency generated by the power supply. It could be RF
induced by the antenna into the AC supply or house DC ground. It
could be RF created entirely by the SS-30M.

With a dummy load installed instead of the dipole, nothing radiates
under any of the variations.

If you are confused with years of experience, how do you think I feel?

I will continue trying things suggested here. Also, I am looking for
a place to temporarily mount the DX-CC outside the house for a test,
which is not easy for my property. Hopefully, the SWR will drop to
something in the realm of reasonableness and RF in the house wiring
will no longer be a factor. Inasmuch as I still have to earn a living
while I experiment, this will take a while.

The Hallicrafters Company was bought out by Braker Corporation of Dallas, Texas in 1975 and the whole company was moved to Grand Prairie, Texas. They made a few CB's and put the Hallicrafters name on various portable Japanese radios. The Braker Corp. went belly up in 1980, and the Great name and legacy of Hallicrafters along with it. I hope this sheds a little light for you.

(My apology if this appears as a duplicate post on your ISP. I don't know what happened, but it failed to appear on my ISP.)

I would appreciate knowing if anyone using the MSquared OR2800 Rotator has experienced any problem with the internal rotation limit switches. Specifically, their premature "opening" before actual rotation limits.

Thank you.

Keith (KS9C)

Earning a living definitely comes first :-)

You may want to consider putting up a small dipole, something that would be easy to mount in a temporary manner, that is resonant on, say, 10 meters, or whatever is convenient.

Then, at least, you would have a "normal" antenna and you could eliminate it from the equation, as a problem. Right now, it's hard to say what the problem is, since you've got that slinky antenna in place, and anything you do may be snookered by the antenna itself. The fact that you say your problems go away when you try the dummy load indicates the slinky may be what's wrong.

Have fun and good luck...

These are all aimed at the CB market. Anybody's guess as to how linear they are. One thing for sure, you had better buy a bank of bandpass or low pass filters to clean up the output, as these have only a filter to clean up 10/11M, maybe.

I don't know about you, but I always get nervous dealing with companies that are so under-funded that their email account is on Hotmail (a freebie) and their web site is on Geocities (another freebie). I also react with some skepticism when web sites are littered with misspelled words.

Also, no mention of FCC certification on these amps...

You weren't lucky, Max; you were smart. You knew what was needed. These tests and adjustments are necessary for any amp and make the amp "bad" - as urban legend among hams would have us believe.

OTOH Martin made a very good point on the original question demo'ing a lack of that knowledge. That speaks volumes about our US exam question pools. Why are folks who know zip about using amplifiers being licensed to own and use them??

Hello;
I'm looking for a service manual for a Standard C5718DA Dual-Band Mobile.
I'd be willing to take a copy of the manual, also.
Will pay for the manual, or copying, and also shipping

Thanks!!

P.S Does anyone have any experience with intermittent, maybe temperature
related misoperation of the C5718DA??
Would this be related to vias on the control board, or ribbon cables/ ribbon
cable connectors or?????????????

Thanks!!!

Hi JJ DD!
I don't have the 757 schematic in front of me at the moment, but
if your 757 is locked in TX with the CW Key only, there is an I.C.
that is located on the RF Unit, that the CW Key connects to, that
probably has failed.

Long winded explanation I guess.
I'll try to look at the schematic and tell you which U# the I.C. is.

That I.C. controls some of the TX switching functions...

Wish I'd thought of that before spending so much time. I can fit that
on my property and the $20 won't break my budget. Thanks.

I wouldn't be surprised to learn that the slinky messes things up with
all the inductance of those coils. After all, a dipole with straight
65 ft. wires works OK, even if they are steel.

I haven't really followed this thread but I must respond here.

There isn't a link to it on my home page but if you look at:

http://users.triconet.org/wesandlinda/w7uvr.jpg

you can see the old QSL card of my former neighbor and Elmer (gave me my Novice and Conditional exams), the late Lee Smith, W7UVR.

This is circa 1958-59 so the equipment dates from that era and was "state-of-the-art."

The vehicle was a 1955 Mercury with a 1956 Lincoln engine and truck springs and tires under the rear. (There was an extra leaf in the spring on the side where the HV power transformer resided)

Initially, the amplifier ran a 4-1000A, high level plate-modulated using push-pull-parallel 813's for modulators. Later it was converted to a linear for SSB.

The small beam on the top of the car could be elevated to a height of 30' using a pneumatic mast (visible in the middle photo inside the car). The beam was later replaced with a three-element tribander that was folded for travel using custom machined tubular hinges.

There were two whip antennas on the rear using motor-tuned edge-wound silver-plated inductors and vacuum variable capacitors. These were housed in the large Plexiglas boxes visible in the top photo. These were of course tunable from the driver's seat.

The generator in the photo is a 5KW Kohler, which was later replaced with a 15KW in a larger trailer. The equipment was also continually upgraded as the state of the art changed. (Even in these photos, the equipment is different)

So, 15KW mobile? I doubt it (corona problems) but not too farfetched if you put your mind and money to it.

I believe this mobile was on the cover of CQ magazine once but I never saw it. At some hamfests of the day they had mobile judging contests. When he pulled in, everyone else went home.

About a year ago I bought a 633mhz new excess stock for $300 (no
monitor). System prices are a bit higher now, but not that much.

I recommend you look at:
http://www.compgeeks.com/products.asp?cat=SYS

They currently list:
766MHz/128MB/20GB/12xDVD for $289
667MHz/128MB/15gb/48xCD/8x8x32xCDRW for $299

No connection with them, other than a repeat customer.

There are other places like compgeeks. dealnews.com may list some
deals, and they definitely have some links to price checking sites.

It looks like the same guy in southern CA who was peddling this junk before.

He was formerly in Washington State, is a licensed amateur who moved and didn't update his address info with the FCC database.

It looks like he's still the same drop out who never mastered spelling or grammar and is too stupid to use a spell checker.

Would YOU buy a used car from this character? I hope not! AND not an amplifier obviously aimed at the CB crowd either!

IBM drives (most likely made by someone else) had a fancy bezel that
fit in with the rest of the PS/2 front panel.

My recommendation is to ditch the PS/2. If your PS/2 is
microchannel, make that an URGENT recommendation.

This is not entirely true! We have a 1.2 system in Los Angeles that covers the entire Los Angeles area with only 2 repeaters linked together. We have HT coverage in the entire LA area. Of course some areas are a bit scratchy but mostly very good coverage.

Any HT (Handy Scratchy) will always be limited in range but when designed right, it could go a long way. 1.2ghz is a relatively quiet band.

Looking for a back-up SB-220.
Condx not critical as long as your asking price fairly reflects that.

Would like to know this about your amplifer:

(1) How long have you had it?
(2) What tubes are in it?
(3) How old are the tubes?
(4) What kind of output on 40m & 10m?
(5) What drive power, grid- and plate-current at these output measurements?
(6) With or without ORIGINAL manuals?
(7) What cosmetic shape?
(8) What does it NEED to be 100% functional at full output?

Tnx!

Oh, I don't know. With these amps, I figure I could earn the Worked All Neighbors, worked all VHF/UHF TV channels and occupy to entire 10m band with one QSO. Try doing THAT with a type approved model.

Hello again Claude,
In my haste I failed to notice only one of those links is for the
actual radio. The second listed link is for R-5000 documentation
package. You may still be interested in that as well.

On the one that I had the microphone was commoned with the case.
I separated the case and the microphone lines at the switch in the base,
leaving the case of the mic connected to the "ground" of the radio, then
hooked the mike to the radio mic+ and mic-.
Insulate the mic element from the case in the head.
KA9CAR

Fortunately, most are not quite as strange as that model with the motorized bandswitch. They dumped that idea quick. It is a fairly decent rig when they are working right, as I had one in here to try one time, but I thought my smaller ic-730 was a better overall radio. I compared the 720a, the 730 and the 725 all side by side one time as I was considered buying either the 725 or 720a to add to my 730. The 725 wasn't a bad rig I guess, but I still prefered the 730 over the others. The 720a had a certain funkyness to it as far as the relay operation, and working cw, etc. I can't remember the exact specifics, but I didn't buy it. Or the 725 for that matter. I ended up buying a near mint TS-830 instead, and I still don't regret it. The 830 is a great old rig. I did buy a 706g about a year ago, so I still don't have problems with icom too much. After a year of steady abuse, it's still working, so I guess thats a good sign.. One thing I did like about the 720a is it's longwave reception was fairly decent as I remember. My 730 is presently broke due to not being able to find the part I need, but it was a great radio for many years. Solid as a brick. I still intend to get it going again some day. All I need is a part for the display board. Actually, I'd like to find a junker 730, and just swap the whole board, and keep all the extra spare parts for future use. MK

I acquired what I believe to be a Motorola Micor 100w PA. The only number I see on it is TLD1693BV. It is a large rack mountable unit. On the left side it has a RF input BNC then four connectors then one more. On the back it has two connectors marked A+ and A- then over to the right is the output BNC. Could anyone tell me where to apply the keying voltage and how much voltage is required? Thanks.

Any opinions on the Messenger M4V? I tested one I bought several years ago and put it up
on the shelf. Seemed to do pretty well on all bands, but I didn't want to push my luck so I put it
away for another day. Iit's still sitting there. It worked on all bands with about 650 watts out on 75 meters. I am a little afraid of it until I get around to doing some real tests on it. I don't want
to attract RH's attention, or upset the neighbors! LOL!

If I understand right the rig is keyed only when there is a plug in the CW jack. If so then I doubt that the IC is at fault. IMHO more likely a problem with the CW Plug you are using or the CW jack itself.
good luck
Don

1507. FS: Drake TR-4C, T-4XC Price Redux

Newsgroup: rec.radio.amateur.equipment
Date: 2002-02-01 03:34:40 UTC
From: rlucch2098@aol.com
Message-ID: <20020131223440.21247.00000473@mb-ma.aol.com>
Source record: 48109

Hi Guys;
I have reduced the prices a bit to help sell them here, if not, they go to Ebay!
The First is a Drake Tr-4C transceiver.
No Supply or manual or options.
It put out 100 watts + on each band.
It is all complete & original with NO mods noticed.
It is in almost excellent condition, but check the pics.
There are no dents or scratched up cabinets to speak of!
Everything works but sometimes I hear what sounds like a loose connection, usually upon turn on & it looses sensitivity, but not always. Wigglin the tubes helps bring it back.
Both ssb work, calibrator, meter, vox, cw, etc.
It did get better after I "pooked" around a while, like wigglin the tubes :-)
This unit was stored for a long time & I am NOT a tech.
Pictures>>

http://www.baltimorepress.com/~wa2rqy/tr4c-1.jpg

http://www.baltimorepress.com/~wa2rqy/tr4c-2.jpg

http://www.baltimorepress.com/~wa2rqy/tr4c-3.jpg

http://www.baltimorepress.com/~wa2rqy/tr4c-4.jpg
Price is $175 SHIPPED CONUS

Last but not least is a Drake T-4XC Transmitter.
Again with no supply or manual.
This radio belongs to a retired friend of mine, he bought it new about 1975 or so & he stored it in a carton about 13 years ago with some silica gel packs.
I applied power for the first time in all those years and it took awhile before it started going again, Hi!
Now I get 100+ watts easy out on all bands.
The S/N is 23171 and is in really nice shape about eary very-good but see the pics, not beat-up or anything and all complete including the feet.
I had to clean a few switch contacts but I am sure it will need a good cleaning & maybe even an alignment but its well worth it I believe. The Chassis is really nice, some of the nuts may have some very minor rust from all thoses years of hangin around & not being used. here are some pics>>

http://www.baltimorepress.com/~wa2rqy/t4xc-1.jpg

http://www.baltimorepress.com/~wa2rqy/t4xc-2.jpg

http://www.baltimorepress.com/~wa2rqy/t4xc-3.jpg
Price is $200 SHIPPED

Oh, none of these pics have been modified or touched up, only enhanced,
cropped & brighten up.

Bill,

I happened to use a Palomar 225 quite legally here in Canada on 10m with quite a bit of success. Unsolicited comments from other hams will confirm this. Don't assume everyone selling an amp such as this is targetting the CB crowd. Not that you make the rules on this newsgroup anyway.

1510. Re: CB Amp's (Was Realistic HTX-100 questions) Sorry for the stupid question

Thanks to all who sent replies to my original question about the HTX-100.
Most of the replies were without bias towards a newcomer to the hobby but a
few seemed to show a smugness and intolerance for anyone with less than
their own level of expertise. We don't all come to the hobby with the same
background. It's also a shame that the old saying as there is no such thing
as a stupid question isn't true anymore.N7WRK

And anyone who actually attempts running 50kw through a mobile antenna,
wont have the brains left to file a lawsuit anyways.

Hi Jim,

Not restoring... building! I'm building a tube-type T/R switch
for full break-in operation with my BA gear. It's from the '68
edition of ARRL's "Single Sideband for the Radio Amateur".

Actually John
Anyone who would attempt to run 50kw through a mobile antenna
most likely doesnt have enough brains to know how to file a
lawsuit.

YMMV

Some IBM drives we've bought had a different SCSI connector designed to
plug into their PC, requiring an adapter in other more typical
applications. I'm not familiar with his PS/2 but IBM may well have
designed it to require a propriatary drive. Otherwise, any SCSI drive
ought to work FB.
Good luck ... KA3DWW

No. Those are the Tucson Mountains and the photo was taken on Ajo Road (although it still might have been called Indian School Road at that time)

My sincere apologies if you got that impression. I was not criticizing your lack of knowledge, which you are after all trying to "cure". What disturbed me is that the study materials and the exam question pool offered you hadn't provide you with the info needed to match a radio to an amplifier before licensing you to do so; info I deem essential to managing an amateur station vs a CB. Your effort to get that info is laudable but the fact that you *had* to seek it on your own *after* being licensed is a tad scary. I see hoards of neighbors surrounding our shacks like peasants after Frankenstine's monster because, lacking that knowledge, we inadvertantly QRM'd their Saturday football game .... ;o) That is why we cannot buy amps that work on 10 meters in this free country.

So, rather than offering you BS about how you're better off without an amp, or how all "CB" amps are inherently useless, I suggest you get a local Elmer or a good book, and learn what somebody should have taught you in the first place.

There is prolly a pot in your radio to adjust its power output (Po). Adjust it to no more than 1 or 2 watts. Hook up the amp and a meter to measure its Po. As you increase the radio's Po the Po of the amp will rise linearly to a point then flatten out, indicating that you are off the linear part of it's in/out curve. Turn the radio Po back down til the amp Po is about 75% of that max. Next, get on the air with somebody you trust to check your audio quality. If it shows any distortion turn the radio Po down some more til the distortion disappears. Finally, check for TV interference. If none you're good to go; otherwise install a low-pass filter. This same procedure works for mic gain.

Alternately, take the radio and amp to an *experienced* tech and let him match them up properly. You can find them at most truck stop CB shops (evil grin).

Good DX

Well Gary maybe you want to look at URL:
http://www.bellelect.com/products/specs_misc/eni_525LA.html
And find a reconditioned one for
ENI 525LA $5,495.00
Note it requires 1.0mW for full output

Maybe Ebay ain't so bad -- huh
Its a laboratory instrument which accounts for its cost

--

I tend to agree about CB stuff in ham groups - but in THIS case, *I* won the bid on the item, and
intend to incorporate the antenna into some ham mobile antenna experimentation - in fact, I have
arranged to take *2* of them at the bid price of $19.99... How can you beat that price, as compared
to a Hamstick or Hustler that's built MUCH lighter and cheaper?

Heathkit HM-2140 SWR/Power Meter - Dual Meters - Ebay

This unit has dual meters, one for power and one for SWR (you can watch both without switching back and forth). It also has a remote sensor so that you can place the meter on your desk, and place the antenna connections in a more convenient location. It is rated at 2000 Watts maximum (switchable scales for 2000 Watts and 200 Watts), and covers all of the HF Ham bands, 160 through 10 meters (1.8 - 30 megahertz). It also has switch settings for Average and PEP power.

It is in excellent condition. There are no scratches or dents. I just checked the operation and replaced the battery today (it's been on the shelf for a few years since I bought it at the Dayton Hamvention). There is a copy of the manual that is included.

For auction on Ebay, click on:
http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=1328359475

I will be glad to provide additional information. Contact me at w4tq@mindspring.com

Vintage Shure 315 Microphone - Ebay

This microphone is in beautiful condition, and I can't find a flaw on it. It also includes the box, protective paper bag (brittle and has a tear), Certificate of Inspection, Cable Tag, Microphone Caution Tag, Data Sheet, Catalog Request Card.

For those who aren't aware, these were produced about 50 years ago. They are gradient (ribbon) microphones. The box shows a list price of $75 (that was a lot in the 50's).

For auction on Ebay, click on:

The schematic does mention the inductance of those chokes,
though it's the parts list that specifies the Ohmite.

The two in the power line, the Z-50's, are listed as 7uH.
Since that's just building up a whole power line filter,
you might just try one of those power line filters that have
two terminals on one end, and a jack for a three-prong cord
at the other. It takes care of the chokes, and the worry about
getting capacitors for connecting across the power line.

Or, find a scrap switching supply, like from a computer,
and grab the line filter components out of that. There's
bound to be some sort of coil, though the ones I've seen
seen usually have some sort of bifilar wound coil, and some
capacitors that go across the AC line.

The other choke, the Z-28, is listed as having 21uH. Find one that is in the general range and enough current rating, and you should be fine. Try one of those moulded chokes, though I don't know about their current rating.

I can picture a chart listing those Ohmite chokes, and their inductance, but I can't remember where I saw it. There wasn't anything special about them, as far as I know, other than in an era where you'd tend to see 2.5mH values when you saw chokes, the Ohmite series was a range of inductors, that just happened to associate a given inductor to the ham band, in MHz, where it might be most appropriate.

You could probably just wind some coils of basically the same inductance, and get away with it.

Or try one of those 2.5mH chokes, after all, they worked in a lot of other items of that era, as plate chokes.

Again, there's nothing magical about those coils.

The 3003, according to a chart I found, is a .5 inch diameter coil, 2
inches long, with 16 turns per inch.

The 3016 is a 1 inch diameter coil, 3 inches long, with 32 turns
per inch.

Oops, I see the parts list even specifies that information.

So for the 3003, find some sort of coil form half an inch in diameter
and 1.5 to 2 inches long. Get some wire. Since the parts list
says 23 turns, then fit that into a length bit longer than 1 inch.

For the 3016, find something an inch in diameter, maybe 1 inch long.
The parts list specifies 19 turns. So wind it so it fits into
the about the right length.

1567. Icom OPC-478 Cloning Cable Question

Newsgroup: rec.radio.amateur.equipment
Date: 2002-02-02 05:54:09 UTC
From: lkaymill@aol.com
Message-ID: <20020202005409.28709.00000735@mb-cv.aol.com>
Source record: 48071

Does anyone have a schematic for the OPC-478 Cloning Cable?

Apparently it has a 3.5mm (mono or stereo-??) plug on the radio end and a DB-9 connector with level converter components inside for the computer. Looking to use this with an IC-2100H.

Thanks for any assistance.

lkaymill@aol.com

This may be true in some cases, but I've got a SCSI DAT drive made
specifically for IBM PCs and it mounted and connected to my SCSI cable
just like any other PC device. So that is at least a possibility.

1573. Ten-Tec Scout 555 band-switching project. . .

Newsgroup: rec.radio.amateur.equipment
Date: 2002-02-02 08:34:44 UTC
From: googlyelmo@earthlink.net
Message-ID: <3C5BA49B.AE4351F0@earthlink.net>
Source record: 48077

I have been thinking about constructing a switch box for the modules for

my Scout, really since a month or two after I bought it in 1998. I love

this little rig, but I am getting mighty tired of swapping the band
modules in and out, in and out.

So after a couple of years bitching about it
and thinking about it, I have decided to do something about it, and do
it in
the next week. What I have planned so far is an
ABS/plastic or (probably) aluminum case, large enough to accomodate 6
modules
(I don't use my Scout on 160, 17, or 12), complete with a switch and
[maybe] indicator lights.

I keep meaning to call Ten-Tec's technical support
department, but I never seem to make it before they go home @ 4 p.m.
Eastern. I need to know what the type of connectors used in the modules

are called (esp. the edge-card, but the barrel/coax ones as well), the
size, ratings, and where I can get them. I also want to ask them if they
know
of anyone else homebrewing a bandswitching scheme for the Scout, and
what to
look out for or avoid in the process.

The modules will connect to the box, with one flat-ribbon cable going
from the box to the module socket on the Scout. I need to figure out
how to do this so that the job is reliable, durable, and looks nice.
Other questions and issues I have with this project are: what type of
switch (e.g. rotary ceramic, electronic, multiple push buttons, etc.) to

use to select the active band, and the best wiring arrangement for six
modules?; the best case material?; any issues with grounding, cable
lengths, heat, etc.?; what type & number of indicator(s), i.e.
neon/LED/incandescent?

So, that's my project plan. Not terribly complicated, but I do have a
few things to work out. If you have any suggestions for addressing the

questions I have raised above, I would be grateful to hear them. Any
other comments or observations that would help to arrive at the best
possible design are quite welcome too. And BTW, has
anyone else built a box like this for this rig before, or come up with
another good band-switching scheme for the Scout and its modules? Once I

get the project finally thought out I will begin building, and post pictures and an account of my progress on the web. Thanks.

Will, KD7BFX

> mounted gen set to load up this antenna?

They don't run 12 volt dc systems. Alternators are capable of AC.

But for 15 KW, assuming about 50% conversion efficiency all down the
line, it would require somewhere between 400 and 500 horsepower to
the alternators.

Most common gensets are not capable of that kind of power output.

Last I checked, a horsepower was just under 750 watts (745.7 to be more precise). At 50% efficiency, 15 kW works out to 40 horsepower on my calculator.

Maybe they're just not makin' horses like they used to?

The Yaesu VX-5 is a tri-band unit, covering 2m, 440, and 6 meters. It also has shortwave receive, and weather stations !! It will pick up am and fm broadcasts. It has a solid case, and is very full-featured. Max power is 5 watts output. It is in the $300 range (when I bought it), but it is a top-of-the-line unit.

If you buy a 2m ht every year or so, buy one in the $79-125 range. If you are like me and buy one every ten years, buy the VX-5. You will like it.

I replaced this assembly on my old IC-37A several years ago. The part was about $20 shipped from ICOM in Washington state. The bad news: they no longer stock this part.

Likewise, it is a horrible job to replace the pot even if you somehow get the right part.. It took me 3 hours and a blinding headache afterward to get it done right. Then I sold the radio about a year later.

My advice? Get a volume control (with no switch) of the same value and mount it in a hole drilled in the left rear of the top cover as you face the front of the radio. The new pot will be hanging down in the area where the voice annunciator unit option would mount, so you'll have plenty of room to do this. Put a small knob on the top of the shortened shaft of the new control to be able to adjust the volume. Splice new wires to the ones disconnected from the front panel volume pot pins. You'll still use the old pot to turn the radio off and on. This works and you'll save yourself a lot of trouble and grief.

Even if you can get the replacement pot/switch, it is a fragile device. Its the rotational force that is needed to get the control to rotate past the off/on detent that makes the wiper intermittent from the resistive surface. I never shut off my IC-37A with the volume pot after suffering through the repair. (After the repair, I always pulled the DC connection to kill power.)

Amateur Radio Newsline™ Report 1277 – February 1, 2002

Amateur Radio Newsline report number 1277 with a release date of Friday, February 1st, 2002 to follow in 5-4-3-2-1.

The following is a Q-S-T.

The President of the United States speaks to hams in Florida and is ham radio seeing a second Solar Max? These stoies are first on amateur Radio Newsline report number 1277 coming your way right now.

(Billboard Cart Here)

**

BREAKING NEWS: PRESIDENT BUSH COMES TO HAM RADIO

The President of the United States has come to ham radio. Bill Burnett, KT4SB, has the details:

--

President George W. Bush has taken to the ham radio airwaves. This, to thank the Florida Amateur Radio community for being ready to serve the public when it is needed.

The President’s comments were made during a stopover the morning of January 31st at the Volusia County Fire Services and Training Center near Daytona. Around 9:15 AM Eastern Time, President Bush checked in to the Northern Florida Amateur Radio Emergency Service Net on 3.950 MHz using a portable station set up John Schmidt, AF4PU. Then the President made these remarks to the 40 or so stations listening to the net:

--

President George W. Bush:

"I want to thank all the volunteers who help make sure that Florida is prepared for any kind of emergency. I also want to assure you that your Federal government is doing everything we can to make sure that there is not an emergency--starting with unleashing the mighty U.S. military overseas to bring evil ones to justice. But should there be a need for a response, I want to thank you all for helping our communities be prepared. And finally, I want to tell you--we are lucky to be Americans and may God continue to bless this great land of ours. Thank you very much."

--

Needless to say the net members were delighted to have the President of the United States address them. More important, hams nationwide can now be sure that President Bush knows that Amateur Radio operators are ready to serve whenever he, and the nation, needs to call on them for help.

In Miami, I’m Bill Burnett, KT4SB, reporting for the Amateur Radio Newsline.

--

The complete story is on the web at
http://firstcoastcommunity.jacksonville.com/northfloridaamateurradiosocietynofars (Tnx NU4F, CQ Magazine)

**

HAM RADIO SCIENCE: TWO SOLAR MAXIMUMS THIS SEASON

In case you are wondering why the current solar cycle is still providing such amazing VHF and UHF DX, one researcher may have the answer. He says that the current cycle appears to be having a second peak and that this is really not very unusual. Henry Feinberg, K2SSQ, looks at the scientist and his latest data.

--

The most recent and ongoing Solar Maximum -- or Solar Max -- theoretically crested in mid-2000. Sunspot counts were higher than they had been in 10 years, and solar activity was intense. One remarkable eruption on July 14, 2000 caused brilliant auroras as far south as Texas. But after that, sunspot counts slowly declined and the Sun was relatively quiet for month-long stretches. Most scientists said that the Solar Max was over. But was it?

Now, as 2002 unfolds, the National Aeronautics and Space Administrations solar foorecasters say that it looks as if the Solar Max is back with us again. The Sun is again peppered with spots, eruptions are frequent and hams notice that the VHF DX keeps rolling in.

Why is this happening? Well David Hathaway, a solar physicist at the NASA Marshall Space Flight Center in Huntsville Alabama has one theory. Hathaway says that the current solar cycle appears to be double-peaked, and the second peak has arrived.

--
Hathaway Audio Here
In-Q: We have seen other cycles...
Out-Q: ...define this maximum
--

Scientists track solar cycles by counting sunspots and Hathaway is an expert forecaster of sunspot numbers. He says that sunspot counts peaked in 2000 some months earlier than we expected. He says that the subsequent dip toward solar minimum seemed premature and before long, sunspot counts reversed course and began to climb toward a second maximum that now appears to be only a few percent smaller than the first.

--
Hathaway Audio Here
In-Q: Its a bigger than average...
Out-Q: ...smaler than 19, 21 and 22.
--

Hathaway notes that there is a widespread misconception that solar activity varies every eleven years like a pure sinusoidal wave. It isn't. He says that solar activity is chaotic and there can be more than one peak in any given period. Translated for ham radio: Enjoy the VHF DX while you can.

For the Amateur Radio Newsline, Henry Feinberg, K2SSQ.

--

Hathaway says that the Solar Max eleven years ago was much the same as this one. The first peak arrived in mid-1989 followed by a smaller maximum in early 1991. And if you are interested in hearing more about this interesting phenomena from David Hathaway its as easy as taking your web browser over to www.rainreport.com. Or you can call on the phone to area code 847-827-7246. (NASA, RAIN)

HAM RADIO IN SPACE: HF ANTENNA INSTALLED ON ISS

High Frequency ham radio operations from the International Space Station could be on the not to distant horizon. This, after a successful space walk on January 25th to install another antenna on the orbiting outpost. Amateur Radio Newsline's Roy Neal, K-6-D-U-E, has the details.

--

The spacewalkers have had another good day in space. On Friday the 25th of January, Cosmonaut Yuri Onufrienko, RK3DUO and Astronaut Dan Bursch, KD5PNU, successfully mounted a second ham radio antenna near a docking port amidships on the International Space Station. It is made of flexible tape and is similar to but longer than another antenna installed on January 14th. That one tunes both VHF and UHF frequencies. The new antenna will tune HF frequencies.

ARISS Board Chairman Fran Bauer, KA3HDO, says it definitely will work on ten meters and may even be made to work on 15 and 20 meters. BUT right now there is no gear on board to handle those frequencies. Experiments using the lower frequencies are on the list of futures for ARISS but no timetable has been assigned to design and build them.

Owen Garriott, W5LFL, the first man to operate ham equipment in space, once prophesied that a five watt transmitter in orbit might well be heard simultaneously world wide. The great number of hams with good stations on the lower frequencies also makes them enticing to ARISS. It's a safe bet that serious consideration now is being given to expedite such a project. Once a station is sent up, the antenna will be waiting.

The new antenna is the second of four to be installed on board the space station. No timetable has been announced for the final installation. All of

these amateur antennas were built by Italy, tested and qualified in the US, to fit ports built by Russia, as befits the international nature of the ISS.

For the Amateur Radio Newsline, Roy Neal, K6DUE

--

Installation of the 2.5-meter long flexible tape antenna involved not only the mechanical deployment but routing cables and establishing the R-F connection as well. (ARISS)

**

HAM RADIO IN SPACE: THAT ANNOYING SATELLITE IS OFF 2 METERS

An annoying mystery satellite transmitting AFSK, frequency modulated Morse on 144.100 MHz for several days has been identified. It turned out to be a signal from the MAROC-TUBSAT satellite. This is an Earth-sensing spacecraft owned by a Moroccan government agency called he Royal Center for Remote Sensing. It was placed into a polar orbit by a Russian launcher on December 10, 2001.

As soon as he learned of the interference to amateur operations, Professor Udo Renner of the Center had the 144.100 MHz transmitter turned off. He then notified AMSAT Germany that TUBSAT was no longer on two meters.

But TUBSAT also has a downlink at 436.075 MHz. This system is only busy over North Africa and Europe and only when the control stations in Rabat and Berlin are activated. It has not been heard elsewhere in the world. (AMSAT-NA)

SPECTRUM PRESERVATION: ARRL SAYS IT WILL FIGHT TO KEEP RFID OFF 70 CM

The ARRL says that it will go all the way to protect the 70 centimeter ham band from a threat brought by commercial interests. At issue is a plan from SAVI Technology and already tentatively agreed to by the FCC to deploy unlicensed transient R-F identification tag transmitters operating between 425 and 435 MHz. These tags run at much higher field strengths and duty cycles than Part 15 rules now permit.

According to a League bulletin issued on January 29th, ARRL officials have already met with members of the FCC staff as part of the League's effort to stave off a band threat. The bulletin says that General Counsel Chris Imlay, W3KD, and ARRL Technical Relations Manager Paul Rinaldo, W4RI, delivered an ex parte presentation to FCC Office of Engineering and Technology staffers January

14th outlining the opposition of the ham radio community. (ARRL)

**

FCC: CHAIRMAN POWELL HOME AFTER HOSPITAL TESTS

Federal Communications Commission Chairman Michael Powell was discharged from the hospital on Friday January 25th. This, after a two-night stay in the to undergo tests because of a lingering stomach bug.

Stomach discomfort caused him to cancel appearances at the Consumer Electronics Show in Las Vegas on January 8th and again at the annual conference of the National Association of Television Program Executives on Wednesday January 23rd. Doctors advised precautionary tests that required overnight stays at Walter Reed Army Medical Center in suburban Washington. (Published news reports)

**

ENFORCEMENT: THAT SONG WAS NOT AS BAD AS WE THOUGHT

The Federal Communications Commission has dropped an indecency fine against a Colorado radio station. KKMG FM of Colorado Springs had been fined seven-thousand dollars for airing the edited version of Eminem's "The Real Slim Shady." This, after a listener wrote the regulatory agency to complain.

At the time the fine was issued federal regulators said the edited version still included some expletives and references to violence and graphic sex. But the FCC now says it has reconsidered. It now says that the lyrics in the edited version didn't violate its rules by being "patently offensive." (FCC)

**

RESCUE RADIO: BRAZIL RADIO OPERATORS HELP IN POWER OUTAGE CRISIS

A major electricity blackout hit at least five Brazilian states on January 21st, and it was hobby radio enthusiasts that let people know about it.

The blackout, which began at 1:30 p.m., hit hardest in the industrial southeast and the major cities of Sao Paulo, Belo Horizonte, Rio De Janeiro, Goiania, Vitoria and the capital, Brasilia.

According to news reports, Brazil’s National Energy Agency blamed the outage on transmission line failures. The same news report credited Brazilian hobby radio operators as informing authorities that subways in Rio De Janero and Sao Paulo were halted and that traffic lights were out snarling commuters in several areas.

The outage was caused by a failure at the Itaipu hydroelectric station in southwestern Brazil. A power-line failure caused thirteen of the dam's eighteen turbines to stop, cutting off nearly 20 percent of the country's energy. Power was restored about three hours later. The news story did not identify the radio operators as being hams. (Various shortwave news reports)

**

RESCUE RADIO: NEW INTER-JURISDICTION RADIO SYSTEMS BEING INTRODUCED

Santa Clara County California, police, fire and emergency medical personnel have never been able to communicate with one another at the scene of a major disaster. This is because each agency uses a separate radio system. That is expected to change this year.

Santa Clara County will be leading the nation in using new digital radio technology to solve the inter-agency communications problem. The new system will allow up to eighteen participating jurisdictions in any county to talk to one another instantly.

By way of example, once the system is up and running, officers involved in one of California's famed high-speed car chase will be able to talk directly to police in the neighboring jurisdiction as the suspect approaches that town. They won't have to switch channels or go through dispatch centers. This means less time wasted and the probability that lives will be saved.

While Santa Clara county is at the head of the pack in adopting this new digital communications technology, the same news reports say that and Washington, D-C is not far behind. (Cal-State Info.)

**

PUBLIC RELATIONS: A CHEAP SATELLITE

A Cheap Satellite is the name of an Associated Press item that highlighted the work of the faculty and students at the United States Naval Academy in the development and launch of the P C Sat ham radio satellite. The story tells how the twenty-five pound bird was built using off the shelf products including a tape measure for its antenna and rechargeable double A cell batteries for power.

The story was written by Tom Stuckey and moved on the wire on Wednesday January 23rd. It noted that PCSat, was the 44th amateur satellite put in orbit. It is one of more than a dozen built by university students around the world. (VHF Reflector)

**

CONVENTIONS & HAMFESTS: ORLANDO HAMCATION WEAK SIGNAL FORUM

The Orlando HamCation will host its first ever Weak Signal VHF and UHF forum. Beginning at 2 p.m. on Saturday Ferbruary 9th, the one hour session will be moderated by N2CEI, of Down East Microwave. Also, Tom Haddon, K5VH, will be on hand to motivate more Florida hams to become active on the Microwave bands.

If you are in the Orlando Florida area on February 8th to the 10th drop in on the Orlando Hamcation. For more details and or advance reservations, go to oarc.org/hamcat.html on the World Wide Web (W2BZY)

**

CONVENTIONS & HAMFESTS: DATE CHANGE FOR RADIOFEST 2002

Brian Broggie, W6FVI, asks that we pass along a date change for RadioFest 2002 sponsored by the Naval Post Graduate School Amateur Radio Club in Monterey California. The new date is February 23rd. More information is in cyberspace at k6ly.org/radiofest. (W6FVI)

HAM RADIO SCHOLARSHIPS: THE DARA SCHOLARSHIPS

The Dayton Amateur Radio Association is one of three ham radio organizations seeking nominations for its scholarship program for the 2002-2003 academic year. According to DARA, applicants must be graduating high school seniors in 2002 and hold any class of an FCC issued mateur Radio license. The scholarship awards run up to $2000, as determined by the scholarship committee. Money must be used toward tuition at an institution of higher education.

To obtain an application, send a self-addressed, stamped envelope to the Dayton Amateur Radio Association Scholarship Program, 9873 Lower Valley Pike, Medway, Ohio 45341. You can also obtain an application by e-mail to n8emo1@msn.com. Completed applications must be postmarked no latter than June 1st to be eligible for this years scholarship program. (DARA)

**

HAM RADIO SCHOLARSHIPS: THE FOUNDATION FOR AMATEUR RADIO

Another organization offering scholarships to hams id the Foundation For Amateur Radio. The Washington, D.C. area group will administer sixty-two scholarships for the academic year running from 2002 through 2003. Licensed Radio Amateurs may compete for these awards if they plan to pursue a full-time course of studies beyond high school and are enrolled in or have been accepted for enrollment at an accredited university, college or technical school. The awards range from $500 to $2500 with preference given in some cases to residents of specified geographical areas or the pursuit of certain study programs. Additional information and an application form may be requested by letter or QSL card to the FAR Scholarships, Post Office Box 831, Riverdale, Maryland, 20738. (Foundation For Amateur Radio)

INTERNATIONAL - SOUTH AFRICA: SA RADIO AMATEURS OF THE YEAR NAMED

Turning to international news, South Africa is honoring two of its own as that nations Radio Amateurs of the Year. Q-News Graham Kemp, VK4BB, brings us the details:

--
The South African Amateur Radio Development Trust have announced the winners of the 2001 Siemens Radio Amateur of the Year Award. This award is made annually to a Radio Amateur who has made a major contribution to the Amateur Service either on a technical or development basis in ZS land.

The award has been bestowed jointly on Bradley Phillips, ZS5BP, and Garth Wilson, ZR6CY. ZS5BP for his work on the introduction of Iphone and the development of the Internet Radio Linked project. ZR6CY for his continuous efforts to develop communication skills amongst the youth. He has to date presented no less than 80 camps for Voortrekkers to learn the Morse code and basic communication skills.

For Q-News Australia, I'm Graham Kemp, VK4BB, reporting for the Amateur Radio Newsline.

--

This award is considered as South Africa's equivalent to the Dayton awards presented here in the United States. (SARL News, Q-News)

**
INTERNATIONAL - UK: KENWOOD TROPHY AWARDED TO G3XWH

Meantime, over in the U-K, Richard Horton, G3XWH, who chaired the RSGB's Future Licensing and Examination Forum has been awarded the Kenwood Trophy. This, for his significant contribution to training and development in amateur radio.

Horton recently retired from the Radio Society of Great Britain's Board where he was responsible for amateur radio development. His committee was responsible for much of the work that went into the creation of the new U-K Foundation Class license. (GB2RS)

**
DX

In DX, DJ4KW and DK9GG are currently active from Belize as V31YN and V31GW, respectively, through early February. Activity is on CW, RTTY and PSK 31. (RSGB)

And IN3QBR will be active from Vientiane as XW3QBR until the 31st of July. He will be joined, from the 20th of April until the 10th of May by IN3ZNR operating as XW3ZNR. (OPDX)

And R1ANF began operations as CE9 slash R1ANF on the 29th of December from a Chilean base in the South Shetland Islands. He is active on 10 to 28MHz with 100 watts to an R6000 vertical. For all three QSL as directed on the air. (RSGB)

**
THAT FINAL ITEM: CELEBRATING THE LIFE OF ED CLEGG W2LOY

And finally this week, if you were on the VHF bands in the 50's, 60's and 70's then the name Clegg Labs touched your ham radio operations. And as we hear in

this report, the family of the man behind the gear is inviting you to help celebrate his life.

--

Even if you did not own any Clegg gear, the chances are that you talked to someone on the air who did. Whether it was the top of the line Interceptor receiver and Zeus transmitter or the entry level 99'er transceiver, it was easy to spot a Clegg signal by its almost overpowering modulation that seemed just right for the R-F carrier it was on.

Almost every product that carried the Clegg label was designed by the company's founder Edward T. Clegg, W2LOY. When he moved the company to Pennsylvania in the 1970's, Ed took the call W3LOY. Likewise, after retiring to Ohio he traded the 3 for an 8, but kept the famed L-O-Y suffix.

And regardless of the call area, Ed Clegg was first and foremost a communications designer well ahead of his time. Even more important, he was a positive influence on just about everyone with whom he came in contact.

Ed Clegg left us last September at age 80. Now, his wife Martie will be hosting a gathering in March near the Clegg home in Lancaster Ohio. The purpose is to celebrate the life of Edward T. Clegg. And they are asking you to help.

Martie, her daughter Linda and Linda's husband Rob MacGuffie, K2HZN, are asking anyone who knew Ed to share in the celebration. They know that most of you won't be able to be in Lancaster Ohio on March 30th. But some of you do have memories, stories, photos and other Ed Clegg memorabilia that would help to make this day even more unforgettable.

If you have something to share, please contact Linda and Rob before the end of February. Their address is 70 Province Road, Gilmanton New Hampshire with a zipcode of 03237. Rob's cyperspace address is K2HZN@yahooo.com.

For the Amateur Radio Newsline, I’m Cathy Anno, KB0FDU.

--

By the way, a number of us here at the Amateur Radio Newsline began our ham radio careers using gear designed by Ed Clegg. In fact, our producer Bill Pasternak, WA6ITF, got to know Ed while Bill was still a teenager operating A-M on the 6 meter band. (Clegg family)

1593. HELP Counting Module Mod 4 PRO-2006

Newsgroup: rec.radio.amateur.equipment
Date: 2002-02-02 18:36:39 UTC
From: n9mxt1@aol.com
Message-ID: <20020202133639.21663.00000975@mb-fd.aol.com>
Source record: 47998

Hello,
I used to own a modification handbook that showed a modification for the PRO-2004,5,6 I forgot which. It was a mod that you wired in a electronic counting module to your scanner and it would count the number of hits on a specific frequency you were monitoring. Basically, you leave your scanner on a channel in the beginning of the day and come back after work and see how busy that channel was. Its nice for finding out if a frequency/repeater is active or not.

Has anyone else heard of this modification before? If so... what is the mod? How do I wire it into the scanner?

Please email me details on wiring it up.

Thanks so much for your time and sure hope someone can help!

From: SideBand <ab8lr@csotbs.org>
Message-ID: <3C5C3860.4050601@csotbs.org>
Source record: 48000

I'm looking for schematics for an old RCI-2900 10M rig. RCI doesn't support this radio anymore, and they claim they have no schematics for it.

Don't worry, it's not going to be used on CB. I'd just like to get this rig fixed so I can use it in the mobile.. at least until I can afford another 706MkIIG.

Anyone out there have the schematics for this rig they'd be willing to scan and email, or copy and snail-mail to me? I'll pay the copying costs and postage.

Thanks in advance.

Radio shack sells a dual-band through the glass.
Might be worth a try. Kinda funky tho, you 'clip-on' a radiator on the
bottom half if you're going to use it on 440.

That is a good source for DX spots AA7YA....and just recently now
DX-Central has added some nice new - free - DX spotting features.

Once you setup a free account you can then also setup DX spot filters
by band and mode and also by originating country. DX-Central is the only
web browser based DX spot service that has filters.

Also they offer free email notification of DX spots of any prefix(s)
you want to be alerted about. Now I don't depend on the email spots for
my first level of DX info but it is a very good auxiliary source for
spots and for the chance to snag a new one.

It costs nothing to setup the DX-Central account....email address and
password and you're ready to go!

I used one for 8 years on my TransAm...before one of those imortal teenagers
pulled out in front of me in his invinciple SUV.
The antenna worked quite well with no maintenance required over the 8 years.
Just remember to place it in the area on the rear window where the plating
on the inside is spots and not solid.

"Top of the line tuner." This is a QRO tuner. Built-in power meter/ SWR. Dual range (high and low), so tune up is a breeze.

Original owner, non-smoker. Is currently on its way back from NYE. Had a bank capacitor changed and now is operationally perfect.

Has a few cosmetic scratches on the top of the cover in the rear. Front panel perfect. I'm a tough rater so, I'll give this an 8.5!

$450 shipped CONUS. Remember, this unit is one its way back...and will be 100% operational.

This is the 3KW unit. Built in 3KW toroid Balun. Silver plated antenna switches. This is a top of the line QRO antenna tuner

Automatic SWR metering from low power to high. Just back from Nye. Still in unopened box. Sent back to replace a switch and to have calibrated.

Has a few scratches on the top panel in the rear. It a 8 out of 10 and I'm a tough marker!

$500 shipped CONUS Lou

Dear people,

A few years ago I did sell all mine receivers and I want to start all over again as a SWL. Does anybody know what is a good receiver to start with again and what is on the market. I have a budget from 320 U$ (371 Euro). But I have another problem as well Iam moved to a new apartment and second floor in a flat and the roof is not flat but slanting (if I wrote it correct). I have a ceiling what I can use but there is still that antenna problem how can I solve this ?

Thanks for all the help in advance

What brand did you buy? Are you sure you don't have a combination radio
with both FRS and GMRS built in? I know that Audiovox has these. If you
do, and use the GMRS frequencies (and power), you need to get the GMRS
license.

An external antenna IS NOT legal on FRS, but the model that he is selling
has the radio built-in to the magnet mount part of the antenna and the
controls are extended into the vehicle. Therefore, it's not considered an
"external" antenna. Sort of like sticking your FRS radio out of the window
for better range.

These have to be GMRS since the range is specified for "5 miles". I believe the license fee connected with these is like $75 for 5 years. I find that FRS typically has a range of 1-2 miles. The RS FRS I'm auctioning does better due to the antenna on the vehicle roof (up to 3 miles). However, if you use one radio from a high location, like on top of a hill, your range will be even greater. With the other RS FRS pair I have, one antenna is mounted outside the window of a higher elevation apartment (75 feet high). The range from vehicle to apartment can sometimes be up to 6 miles. The antenna is magnetic and waterproof which makes permanent mounting possible.

Hi Phil

It is a bit unclear, but there are actually rear-view mirrors that facilitate turns.

Look carefully at the top (exterior) photo and you can see them. In the bottom photo look behind the steering wheel and inside rear-view mirror and you can see the (out-of-focus) exterior mirror.

Wes

Buy one of the following: Icom R70/R71, or Kenwood R-5000. You can get those used at about $300. For the antenna, you can, either purchase an active/amplified antenna, or attach wire to your ceiling like so:

```
x
x o x
x o x
x o x
o
```

The x's are the wire, and the o' are your coax. Good luck. Also, check out the following site for more ideas:

My mistake, the Audiovox is 1/2 watt FRS but operates
on 8 GMRS freqs and 7 FRS freqs. Their stated claim
of 5 miles is ludicrous if they are only 1/2 watt units.

Since the Cobra is 2 watts, I wonder if it automatically
reduces to 1/2 watt on FRS freqs.

Jon

Date: 2002-02-03 19:30:02 UTC
From: spagnet@austin.rr.com
Message-ID: <_cg78.94297$XZ1.4239737@typhoon.austin.rr.com>
Source record: 48040

I suppose a big multi-band beam antenna at 200 feet might be the cat's meow for SWL, but it's hard to beat a long-wire antenna for receive only. Basically, just string a wire wherever you can. I've event clipped onto the galvanized roof flashing for transmit (with a tuner) and receive with adequate results.

To reset the Microprocessor:

Turn radio off

Press and hold 4, MR, and VFO keys while
turning radio on.

Press F/W key momentarily to initialize the radio.

To set Mode Resetting:

Turn radio off

Press and hold MR, and VFO keys while turning
radio on.

Press F/W key momentarily to initialize the Set mode.

Hope this helps !! (please let me know) remove nospam from
email adr

I have an Azden 7000 50 watt 2 meter rig, excellent condition, very little mobile use, with manual and box. I used for CAP. It is in FB working order. How much is it worth?
If I can get a reasonable price, I'll sell it. I just don't know what it would bring because you
rarely see them on the groups.

Thanks

Jerry,

Can anyone tell me if batteries and battery eliminator for the
P-110 and GP-300 are the same? They look the same in pics
but I need to be sure. In particular I am looking at a 12 battery
eliminator model # HDN4014 which is made for a P-110 but I
am hoping it will work for my GP-300.

Thanks in advance,
Jon

truthfully You can't get much because they aren't in business anymore and there isn't an over abundence of parts. I have a half dead PCS-4000 and really liked it. I would say you could get 35 or 40 for it. Which will probably tick you off, so your better off trading it or just using it til it dies. I'd be interested though if you want to get rid of it.

As new Titan 10m mobile. Can be seen at
http://www.bills2way.com/equip/titan_mobile.html

Comes with Astatic D104 microphone in excellent condition. I would like to trade this for some type of small QRP rig, such as the MFJ series or the like. I have put my FT900 in the car so I don't need this radio anymore. Let me know what you've got. I am in Kingston, Ontario Canada.

Please reply direct to ve3tmt@rac.ca

Thanks,

Max

Source record: 47963

It is worth around 125 dollars; that is what I paid for my PCS-6000. A nice unit, with the wideband receiver, but you can buy a Yaesu 50 watt rig for around the 200 dollar mark. I would probably keep it if I were you. Those rigs were well constructed, with glass-epoxy circuit boards. The nice thing about those later Azden units is that they do maintain their sensitivity across the whole tuning range, the way the Yaesu units do. Crossmodulation performance is also good. Now, if they would only work on those ergonomics.....

I am looking into setting up an HF station using Tx/Rx separates.
Right now I am only considering going with either a Yaesu FR-101 series
or the Kenwood R-599 series due to their being solid-state receivers.

I had an R-599 for a time, so am fairly familiar with it's
operation/specs
but before I go for another 599 setup, I would like to hear from someone
with
first-hand experience with the Yaesu FR-101 receivers.

The ideal would be someone that used both the R-599 and FR-101 for a
direct comparison between the two.

Any comments would be greatly appreciated!

The glass mount that Radio Shack sells is a good one, if memory serves me it is manufactured by Larsen, I've had it mounted for 3 years with no problems

I've been looking into buying a low pass filter and was wondering what they generally go for, before I plung into Ebay to buy one. The ones I've typically seen rate 1k with 5k PEP and an SO-239 connector at each end. How much should I expect to spend on one of these?

Source record: 47970

I have a non-working STANDARD C228A for sale.
It powers up after CPU reset, transmit full power on 2m/220mhz.
receives but very low audio. all key pad function works.
It includes optional CTCSS encode/decode(CTN520) tone squelch unit.
It's complete with belt clip except removed internal speaker,
electret mic element, and lithium battery. no rubber duckie ant.
It comes with owner's manual, schematic diagram, CNB242 12V batt.pack
(nicad removed), and carrying case.

Asking $50 shipped CONUS only.
Reply directly,
mailto:nr6z@yahoo.com

It's worth the price of your station IF you have a harmonic problem!!

Older Drake [TV LP 1000] series, that's what I use, $35. [I've been on
the air for almost 50 years]

Bencher series, used 30 - 40 USD.

New, $70.

Go for a new one, you've got a lot of money invested in your station.

Tim,

I have the Pro I, and very happy with it.
I looked at the Pro II, and I just can't see spending the extra money for the difference in features.
Once all the Pro I's are gone, then would be a different variable in the decision process.

From my AES catalog ... Nye Viking, $57; Bencher, $76, MFJ, $50; Vectronics, $70
@ 1.5 kw, $130 @ 2.5 kw.

The good ones used to cost about $30, so I wouldn't pay more than that on eBay.

eBay gives u a pretty good idea by checking closed auctions and following what
sells for a while. What u or anybody else thinks they're worth doesn't seem to
have that much influence on eBay auctions.

My TS-570D has Tx audio which is apparently rough sounding, not smooth like other rigs of the same type. It seems NOT to be related to mic, mic gain, rf power level, nor the use of a linear. Has anyone had similar problems?

Hello
I have a Yaesu FT-26 2 Meter Hand Held for sale.
Can be modified by a key board to recieve most of the VHF band.
The radio cosmetically is about a 9+
Needs the battery pack and lithium battery to be replaced.
Comes with manual and charger
e-mail me directly for any pictures
rusty@dccnet.com
Asking $60 plus shipping

>with
>first-hand experience with the Yaesu FR-101 receivers.

Never used the R-599, but in the late 70s I had the Yaesu receiver for awhile. It performed fine with one exception -- it had no selectivity controls at all. No IF shift, passband tuning, notch filter or anything like that. Drove me crazy, trying to separate signals on crowded bands. Tried an external audio filter (I believe by Autec), to little avail.

So if you'd be happy with just the standard crystal filter that comes with it, and little else to parse out signals, it should be okay.

It would even listen up on 6 meters, as I recall, with an optional crystal.

It's an hf ham bands only receiver, but with optional crystals it would tune other shortwave and higher frequencies, as well.

It was a fairly "hot" receiver, in that it picked up plenty with just the little antenna I had in that apartment, at that time.

Hi All,
I have a Kenwood TS-850SAT that I'd like to trade for a Ten Tec Jupiter. The 850 is in excellent condition, both electrically and cosmetically. It has dual Kenwood 500 Hz IF filters (8 MHz and 455 kHz) as well as the internal autotuner. Includes the Kenwood hand mic and original manual. I also have a j-Com RS-232 interface for the radio.
Drop me a note if you're interested.
73,
Doug, K4DSP

We have reduced the price to $199 !!! Get one while they last.

We have a supply of Optoelectronics 3000A Plus Counters. A very special purchase allows us to offer Optoelectronics 3000APlus top of the line portable frequency counters that are absolutely brand new, complete with accessories, still in the original factory boxes!. See more details at the ebay auction link below. Go to this link for details on purchasing one - http://www.datadeliverydevices.com/opto.htm or you can email me (remove all CAPS from the email address)

The Optoelectronics website has all specs, details
and the pdf manual at http://www.optoelectronics.com/3000a.htm

1706. Re: FRS Dealers - Need 10 FRS Radios

Source record: 47911

If you're near a Fry's or do a bit of Internet buying and do some searching, I've seen them lately for $5 EACH after rebate when bought in pairs without the tone encoder/decoder and for $10 each bought in pairs after rebate with the encoder/decoder.

You might see if you can find a local dealer and/or perhaps contact COBRA whose products have been in the latest bargain ads. Maybe they'd provide some assistance for a scout group.

Source record: 47916

Outside of some DX packet clusters that mode seems to be outdated.
Packet never was very good for real time usage on the ham bands from
what I have seen. I used to talk 2 meter vhf to a ham about 150 miles
away. We tried using packet and could talk about 5 minuits between the
time I sent him a mesage and the time it made about 5 hops to get to
him. The internet is much faster and more users to take the place of
the messages and bbs uses of the packet radio.

The sound card programs have become very good at doing what most of the
older hardwear used to do. Many good ones are free also. Does the word
free mean much to a ham !!

Before purchasing something from Mike Linger you might look at some of the recent posts from unhappy customers. We are still waiting to receive

payment promised for repairing two defective radios from Mike Linger. It

has only been about a year. We have also received emails from a few others who have had similar negative experiences with Mr. Linger. We would like to hear from more people who have had similar problems.

A new radar study shows that the ice sheet feeding the Ross Ice Streams is growing. That is a dramatic change in an ice sheet covering about a third of West Antarctica and that has retreated nearly 1300 kilometres since the end of the last ice age. The big question is if the change marks the end of the retreat, or just a short-lived reversal. So much for global-warming!

Aloha, anyone got any suggestions for soldering weathered stranded wire? I'm trying to revive my G5RV which blew down during the last storm here. I've tried wire brushing it, sanding it, using flux...none of these work. Is there some homebrew secret for cleaning corrosion from copper wire, making it like new so it can be soldered? Some acid wash or something? Mahalo, I appreciate the help.

Years ago I had a paste that you would dip the wire into and then remove it with an industrial wipe.. From the way I remember it stinging if you got some on your hand it was acid based. I'm not sure how good an idea it would be to use it on stranded wire but it worked great for removing varnish off solid wire when I worked doing electronic assembly and had to wire transformer leads to a circuit board.

I suspect some would cringe at this but I'd probably try a bit of diluted pool acid (HCl - muriatic acid) and then wash it well with water and dry it. I think rubber gloves and eye protection would be a VERY GOOD idea if doing this.

Source record: 47933

Gidday All,
if you wish to participate (BID) in a TENDER of Surplus
Test Equipment & Amateur Radio gear - check my WEBSITE out. An
Australian Government Department is disposing of this equipment. I'm
running this Tender on their behalf. There are IFR Receivers, ICOM
R7000's, 7100, KENWOOD R-1000's, RACAL RA-17's & much more !

I will/can arrange overseas Shipping but please be aware that Shipping
of VERY HEAVY items is NOT really practical.

Although the Terms & Conditions apply specifically to Australian
residents - I will accept payments in $US from overseas Bidders.
Tender closes Friday evening.

Send me an Email & I will hopefully answer any questions you may have.

OK ?

Good Luck.

Alan Devlin - VK3XPD

APD ELECTRONIC ENTERPRISES - soon to be trading as RF RESALE.
Melbourne, Australia.

Wire brushing to shiny copper should be sufficient - as should sanding.
The problem may be the solders they sell these days, that contain little
or no lead.

You might try talking to a plumber, and see what they use - although
their fluxes may be acid, which you really wouldn't want on an electrical
circuit.

I have several pounds of 60:40 tin/lead solder. I have never had any problem
soldering copper with it, even copper that has an oxide coating.

Plumbers flux is acidic, some more than others (IIRC eutectic is the
nastiest one) but all are neutralised by water.
I too have experienced problems with corroded copper aerial wire and I
tried plumbers flux, as I were one and had some old stock of the
stuff. It did'nt work no how, even when shiney clean. For some reason
the wire just wont tin, and yes I was using 60/40 I also tried
plumbers 'wiping' solder which is a slightly different melting point.
I've given up on trying and just waiting for the next rally to buy
replacement HD Copper.
not much help, sorry. Mike W, G8NXD, M3MSM qthr

I have used a mixture of vinegar and salt, soak the wire end in the mixture
and the corrosion will be dissolved!! wash off the mixture with water and
solder it!! Easy!!

Sanding or wire brushing down to bare copper should be enough. One
thing to avoid is acid-based flux on stranded wire. The acid will wick
between the strands and will be near impossible to remove completely.

Picture what will happen with acid trapped between the strands over a
period of time. :-(

Hi everyone,

I'm in the market for a 144/440 HT. The only three requirements are DTMF keypad on the rig and no 'AA battery' rigs, and CTCSS encode.

Don't want some piece of junk that's going to break in a week. But don't want to spend more than I have to.

Any advice new or used? I'll be at the Richmond Frostfest next week, so anything I should be on the lookout for there?

Todd Power supply

Charger/Power Supply uses switch-mode technology
to insure service free operation even when subjected to extremely
harsh conditions. The clean DC output operates radios and
televisions without causing annoying static or snow. Pumps, motors,
lights and fans operate perfectly for prolonged life. They feature
regulated converter/power supply, tight lineload regulation, two-step
voltage switch, current limiting, transient voltage protection and
short circuit/over-current protection. The TPS 45 maintains the
batteries, only putting into the battery what is required by load or
self-discharge, cutting back to
milliamps as the battery requires. Batteries are charged quickly and
efficiently
without over charging. include cooling fan

unit is in good shape. 100.00 shipped in the us. outside us email for
shipping
thanks
chris NI4L

I don't know about the state of packet, but let's not forget
that packet, and standalone TNC's, date back almost a quarter century.

Back then, most didn't even have a computer, and those that did
had a limited computer. With a standalone TNC, you could get
by with a dumb terminal (did anyone ever use one with a Model 33?).

The computers had UARTs, not the USARTs that were needed for packet.
So you'd have to add that to an existing computer (or horrors, do
the parallel to serial conversion in software). The computers
had to do the "packet stuff" and act as a terminal, at a time when
the computers were relatively slow, and limited in memory. And
there was a much wider variety of computers back then, meaning
someone would have to write a program (or extensively modify an
existing one) for each type of computer someone wanted to use
for packet.

A standalone TNC meant that some of the burden was shifted
off the main computer. More important, one could do the
development work once, and it would work with any computer
someone had, or their dumb terminal. Development work could
be done on improving things, not making variations for different
computers. TNC's weren't cheap, but they probably weren't all
that much more than a commercial board adding a USART and a modem
to an existing computer (remember, each design would have only
been useful for a small number of computers). And if you'd spent
a thousand or more dollars on a computer (I spent close to that on
my cheap Radio Shack Color Computer with disk drive here in Canada
in 1984), would you want to be able to use it for the various
things you bought it for, or set it aside as part of a packet network?

Computers have at this point have long been capable of being a TNC
and doing other things at the same time, without trouble. So is
there much sense in spending money on a TNC, when the need for
a TNC is a relic from the past?

Hello Andrew,

I have been looking for same and I am seriously considering the
Icom IC-T81A. It may be overkill for your needs, but I like the General
Coverage Receiver and it's size. Price is not an issue with me
if I can get something that has features and is constructed
to last a long time.

I thought the AA ability was a good idea, and was considering
to purchase a battery pack that supports this so if I run into
a jam, I could use easy to find batteries.

Would like to here comments on your AA experience.

The unit does come with a BP-200 battery, so the AA pack
would just be for those occasions that you don't have time to
charge.

Keith

Sure, albiet a limited & specialized one. TNCs + HTs will run for days
on a battery. This lets me provide packet forewarding and BBS nodes on
emergency power 24/7; turning on the laptop (which has a battery good
for only hours) only when I have mail.

Keith,
Be aware that when using the AA battery pack with the T81A, your output power is 0.8 watts. With the BP-200 you get 4.5 watts. From the manual.

It would be HAAT, although the cable might be extended if one so desired (don't think it is legal though). It is not an antenna cable, per se, as the antenna and radio are part of the magnetic base. The cable simply serves to connect the radio controls to the actual radio within the base.

jim: your problem may not be corrosion, but lack of heat instead.

that wire may be acting like a big heat sink, and if your heat source is not large enough, the heat is traveling up the wire, and the end will never got hot enough to melt the solder and let it attach to the wire.

hope this helps.....

I am with ARES(amature radio emergency services) through the Weber County Search and Rescue here in Northern Utah and our Directives state that in NO WAY are we allowed to transmit on the local law enforcement freq's.
The only frequency we can use is the Statewide SAR frequency and our own repeaters.

This may just be in our jurisdiction too. But they have made it VERY clear.

I don't like radios that only take AA batteries. The NiCads (or NMh, or whatever) provide more juice, which provides higher power, which is pretty important in the rolling hills of central Virginia. I also don't want to keep buying new AA batteries for the thing, and I don't want to use regular rechargables either.

I used to own a Radio Shack HTX-202 which came with a rechargable battery and a AA holder. I kept the AA pack full of AAs (I think it took 8) and close at hand in case the power went out and the NiCads died, or for special events/public service where extended activity was expected. It worked O.K., but I don't want to be stuck using that mode.

I have available both male and female 8 pin Cinch Jones connectors. These connectors are great for AC and DC power connections and also quick disconnect for rotor applications. I will ship @ $3.75 per connector. If you need both male and female this is 2 connectors not 1 set. The 8 pin female also works on many "brick" amplifiers with 4 pin chassis mount male configurations. PayPal or Money Order accepted. Picture at http://www.eham.net/data/classifieds/images/38385.jpg

Uh, eutectic is not a flux. Eutectic is the particular percentage of
an alloy (tin/lead solder in this case) which has the lowest melting
point and which (at least in the case of 63/37 Pb/Sn solder), when
cooling, transforms from liquid directly to solid without an
intervening crystalline state.

Mr. Linger,
Here again is a few of the emails you and I sent where you agree to pay for half the repair. Look very carefully at the dates on the repair bill which was forwarded to you and the date when you agreed in writing to reimburse us for half the repair. We just want you to pay us the money you agreed to about a year ago.

Here is the repair cost as sent to me and forwarded to Mr. Linger on April 1st:

Subject:
RE: PRC-70 fix
Date:
Sun, 01 Apr 2001 12:48:54 -0400
From:
"Karlow, Jim" <Jim.Karlow@Takata.com>
To:
Mike <km6ab@pacbell.net>

Mike -

Both of the PRC-70 radios are now fixed and ready for final test prior to shipment back to you.

The following was done to the "Mike" radio:

1. Replaced 4 amp fuse. in A2
2. Repaired A20 DC control module, 2N2222A Transistor.
3. Fixed pinched tuner control wire in main chassis. Prevented tuner and

Final operation.
4. Replaced A24 A2 Coupler Digital Board - Eliminates Intermittent operation.

Radio Checked Operational.

The following was done to the "Mitch Radio"

1. Repaired A4 module - +5 volt regulator Shielded Inductor Short to Ground, 180 ohm resistor, 2N2907 transistor, 2N3720 Transistor

2. Repaired A-5 Module - -5volt regulator shorted. 2N2905 transistor, 2N2907A transistor.24 VDC regulator shorted 2N3766 transistor, regulator

relay.

3. Replaced 15 amp and 4 amp fuses in A2

4. Repaired A20 DC Control, 2N2222A Transistor. Replaced broken resistor.

Radio checks operational.

Your cost is $ 328.26 for the repairs. Please send check. Meanwhile I will final check both units, pack and prepare to ship them back to you.

All the best,

Jim

Here is Mike Lingers agreement to pay for half which is dated April 2nd:

Subject:
RE: [Fwd: PRC-70 fix]
Date:
Mon, 02 Apr 2001 10:21:01 -0500
From:
"Linger, Mike" <mlinger@civilmail.tamu.edu>
To:
'Mike' <km6ab@pacbell.net>

Okay Mike;

I will pay half the repair. The shipping is on you. I should have insisted
on taking the radios back, just like anyone else would do in a deal where
the stuff didn't work but I allowed you to convince me otherwise.....Mike.

(the above is Mr. Lingers words untouched and posted exactly as I received it)

Here is the email I sent to Mr. Linger right before he agreed to pay for half the $328.26 repair bill:

> -----Original Message-----
> From: Mike [SMTP:km6ab@pacbell.net]
> Sent: Monday, April 02, 2001 10:15 AM
> To: Linger, Mike
> Subject: Re: [Fwd: PRC-70 fix]
>
> Hi Mike,
> We originally purchased them to use, not to sell or make a profit. We
> purchased them because they were advertised as working fine, which they
> were not even close. In our last conversation you mentioned you would
> split the difference of the repair up to $100 out of your pocket. The
> repair somewhat exceed $200 but all I am expecting is what you verbally
> offered. We made the purchase in good faith and I would hope you stand

> up to you word.
> Mike.

After reading these emails, does anyone have any doubt about Mr. Linger?

Mr. Linger, please pay us the amount you agreed on in writing so we don't have to crank up the posts to a full blown "BAD GUY ALERT !" on all radio and military related news groups and web sites. All we want is our money.

>appreciate the help.

Dipping in Muriatic acid works well. Just swish it around in clean
water afterwards to remove the acid left behind in the strands.
Muriatic/hydrocloric acid leaves no residue, even the HCL will
evaporate in a few minutes, but for the sake of your tools, etc., it
is best to remove it well before proceeding.

It is quite possible that the comment about insufficient heat is also
important here. It can be surprising how well a large wire can conduct
heat away.

I have the Icom IC-T7H and love it. It is not too huge and is a full power HT as far as HT's go. (5-6 watts) It supports tone transmit and recieve and also has a tone scan function for scanning tones for ones you want to find out. It uses a normal ICOM battery pack and with the wall wart transformer it seems to charge rather fast. There is a AA battery pack also available as an extra backup that can be ordered as well as the battery pack it normally uses. It is a dual band transciever, and seems to perform really well for me. I have (sic) dropped the damned thing more than once accidentally and it still keeps going!

Source record: 47890

You might want to try UHF in hills or mountains. Reason being UHF does "knife edge refracting", if there is a ridge between you and the other station it will "bend" over the ridge top. A couple of years ago when I worked in Alaska, I could use the UHF (on simplex) business band radios in my company truck to communicate with other trucks that were 30 to 40 miles away because of a ridge between us. If it worked at 452 MHz I think it would work for 440 MHz. I read about the phenomenon in the ARRL handbook anyway.

A new radar study shows that the ice sheet feeding the Ross Ice Streams is growing. That is a dramatic change in an ice sheet covering about a third of West Antarctica and that has retreated nearly 1300 kilometres since the end of the last ice age. The big question is if the change marks the end of the retreat, or just a short-lived reversal. So much for global-warming!

1788. Re: Cheapest 2M/440 HT? Try the ICOM IC-T7H

Newsgroup: rec.radio.amateur.equipment
Date: 2002-02-06 18:57:36 UTC
From: "Andrew C. Ohnstad" <spam.sux@die.spammers.com>
Message-ID: <MPG.16cb357c60bf5b8b9896b4@news.rcn.com>
Source record: 47892

So far I've gotten many votes for the T7H. However after checking
ICOM's website I fail to see mention of one feature I really would like,
though I forgot to mention this originally: Dual VFOs. I want to
transmit on UHF and listen to VHF. I plan to set up a dualband mobile
in the shack to crossband repeat. The HT transmits on UHF, the mobile
rebroadcasts that to a local 2M repeater. But I don't want the mobile
to have to crossband the repeater back to the HT. This way I can use
the HT around the house or in the neighborhood and hit the local 2M
repeater on less than 1 watt.

So can the T7H do this split band operation? It doesn't seem so from
the ICOM website, but I'd love to be surprised. It looks perfect
otherwise.

In article <7_888.181$Bg4.277198@monger.newsread.com>, kc8pmx@tm.net
says...

I like my alinco dj-v5. Can get a AA pack for it, or use
rechargable pack(s) or a 12v input. Power varies by voltage, of
course. Can read the memories into computer (limited write ability
reverse-engineered thus far but RTSars.com supposedly can do it all).

I have for sale a nice condition Yaesu FT-101ZD. This particular transceiver is the version with AM mode included. This transceiver uses a pair of 6146W's as the power amps. The cooling fan option is also installed in this rig. Cosmetically it is in nice shape with one small hairline scratch next to the clarifier control. Electrically it is in fully functioning condition with full output on all bands (~100 watts).
$400.00 plus shipping and insurance from zip code 76001.

Hello,

I recently purchased a used IC-718. It does not have the DSP module and the existing NB does little to even begin to reduce the noise. Is the purchase of the DSP add-on worth it? Also, is there any way to re-adjust the existing NB so it will function better?

Thanks, AB

Hello Scott,

Section 401 & 403 of part 97 is better understood when approaching it in the other direction. Think of the amateur tuning around the band and he/she hear a distress call (sos, pan-pan-pan... what have you,) on 8.192 Mhz. This is clearly outside the amateur bands. Perhaps he listens for a few minutes, but does not hear any responses to the stations in distress. Because of section 401 & 403, the amateur is allowed to handle the emergency traffic! In this case, the ham is the controlling authority, not the other way around as is being discussed in the previous e-mail.

Just another perspective on the subject.

Scott,

I am sure that Weber county has laws in place that ban the use of local police and emergency channels for general use. But because these channels are granted by the FCC to the local government, part 97 supersedes any local law in the actual use of the frequency. With that said, I completely agree with you that more harm than good may be done in transmitting on an unconventional frequency. However, if that is the only means of communication, such as you can not hit a local repeater, or are out of cellular range, then part 97 freely allows you to use whatever frequency necessary to aid. Even if you were causing some kind of harmful interference, and slowing things down, what is the worst that would happen, they would DF your location and send in the authorities to apprehend you, in that case, that is probably what you want, to see!

You are absolutely correct about Part 97. A local ham here in Salt Lake County was over in Tooele County and ran across a badly hurt accident victim waaaaaay out in the boonies beyone cellular range and could not hit any of the ham radio repeaters. He tried the VHF and UHF statewide freqs, nothing. He then heard Tooele Co Sheriff talking on 155.910 and he made the call to them. There were no repercussions and all involved, including the Sheriff's Office, was glad he made the call on his ham rig, otherwise the person very well may have died.

When life and/or property is in imminent danger, there is no question Part 97 gives you the authority to use your rig to summon help, regardless. End of story, and a happy one at that.

Forget about using a torch. It will burn off your flux leaving a mess. Use an large iron. Scrape or use fine 300-400 grit to clean to bright copper. You may have trouble with some steel if you go too deep into Copperweld though.

AEA PK-88 Packet Controller in excellent working conditon.
It comes with original box, operating manual, PCPAKRATT DOS software,
and 6' long computer to TNC connection cable(DB9 female to DB25 male).

Asking $50 includes shipping CONUS only.

If interested, please reply directly.

>
> Thanks, AB

I'm not sure if you can adjust the threshold or not. Maybe.. But I
would think it's already correct. I wouldn't mess with it. Some
noises, a blanker won't take out no matter how good they are. For a NB
to really work, there needs to be gaps between the noise pulses. I bet
if you try your NB on slow spark noise, etc, it will work pretty well.
But if the noise is so constant that there is little as far as gaps
between the pulses, then many times a NB won't really do too much. My
TS-830 has one of the best variable NB's I've used, but even it
doesn't work sometimes. On blankable noise, my 706 compares fairly
well to the NB on the 830, but it's not adjustable. The adjustable
blanker will let you use the least blanking needed in order to
minimize the reduction of the dynamic range. But if it's not
blankable, it will seem useless. As far as the DSP, I'm kind of mixed.
As far as reducing noise, I think it's fairly useless overall. Sure,
it will reduce the noise level, but it also reduces part of the signal
you want to hear. So the audio sounds flat and muddy usually. About
the only time I've found it actually useful was when working some real
weak CW on 160m. In some cases, it did seem to help the s/n ratio
slightly on weak low band cw, but not drastic at all. BTW, I have a
706g, but I bet it uses the same DSP as the 718. Probably about the
same NB also. As far as most impulse noise, I find the NB more useful
than the DSP. But my noise has enough gap between pulses usually to
work ok. The downside to a NB, which the DSP is better at, is the
dynamic range. A NB knocks the dynamic range down a good bit. If you
have anyone close to you , you'll hear crud off them. BTW, as a
general comment, if you ever hear a signal on the air, and he/she
sounds to be splattering, check your NB and turn it off before jumping
on them to tell them about their "problem". I've done this myself by
accident once or twice...:(BTW, if you have a sound card setup, etc,
you can download a DSP demo from the silicon pixels website. It has
noise reduction, auto notch and drag drop filtering. In other words,
it eats the icom DSP for lunch overall..You could try it to see if you

think the icom DSP is worth it. The noise reduction works about the same on either one, except the outboard one has three levels to choose from. On the 706g, it's variable with a knob. I almost always keep it pretty low. 2-3 usually...The performance of the auto-notch is also about identical on either one. Actually the auto-notch is probably the only part of the DSP that really lives up to all the hype. They do work well compared to an old manual tune version. MK

Dual VFOs may not be needed. Dunno about the IC-T7 but the memory channels in my Yaesu VX-1s and VX-5 can each be programmed to xmt on one band and rcv on another permitting exactly the capability you describe. The VX-1R is especially "handy" due to its tiny size, provides 0.5 watts on its battery and 1 watt on 12V and are selling for under $130 new.

Dave:

Sure is and those radios are sure work horse. I had 27B years ago
but got me in trouble with all the spurs they put out. Of course
they were known as the cowboy rig because of all the spurs.

Was using one while driving up to gate at government secure facility
and I was detained by guards as they heard me tell guy I was talking
to say I was pulling up to gate on their secure VHF radio system. Boy
was that a mess!

>From: Andrew C. Ohnstad spam.sux@die.spammers.com " I want to transmit on UHF and listen to VHF. I plan to set up a dualband mobile in the shack to crossband repeat. The HT transmits on UHF, the mobile rebroadcasts that to a local 2M repeater. But I don't want the mobile to have to crossband the repeater back to the HT. This way I can use .."

The Alinco DJ-V5TH can be set up to Xmit UHF, & then be on VHF when you unkey. It is 5w, 200mem, includes batt & chgr, can have a seperate ctcss for xmit & rcv, 79-999Mhz rcv, & PC Programmable. It Can't do full cross band repeater, but by your post it seems that You Don't want the HT to do that, because your mobile will. This rig also has all sorts of HiCap batt packs, "AA' packs & other options listed too. Got mine, with the software & xtra NiMi Batt, at www.advancedspecialties.net , but I'm sure most of the major Ham dealers of your choice stock this radio too. Good luck!!!

>I am looking for a beam, yagi or quad used for simplex and repeater use.
>Any opinion on what antenna to consider?

If you are handy a Quagi works quite well. I've built two for satellite work, claimed gain is around 13 dBi, but I'm guessing more in the range of 8-10 actual. Do a search and you'll find several excellent sources of plans. For FM repeater work you should go with vertical polarization....I used PVC pipe for my quagi, used a "T" coupler on the mast with two holes drilled to allow rotation from horiz to vert with just a pin pull and a twist of the mast. My antennas are inside the attic (CC&R problems) so it is not a problem for me. If your antenna is to be external, it should be fixed for your preference, natch.

Cheers;
A

I've heard that some kind of special cables are required when
cabling up Drake 4-Line twins. Would this be some kind of low
capacitance coax, or what? Is this really necessary, or would
I do alright with typical shielded audio cables, or even RG-58
coax? Opinions?

I'm going to be setting up a C-Line station soon.

The only way to look at this, in my mind, is that you DON'T DO IT PERIOD!!!

But... If something happens, you do what you have to do. I've used this analogy in the past. It's like having an unlicensed handgun in NYC and getting mugged. You weigh the situation against the worst case, and do what you have to do. But be prepared to face the music over your choice. If you act with that attitude, you usually find the music never plays.

I really think that anyone who goes around and 'plans' on it is just setting themselves up to be in trouble.

Mike

Well Mike,

I would have to disagree. Typically, people handle crisis situations better if they have 'planned' or thought about them in advance. And the brash statement of "...you DON'T DO IT PERIOD!!!" is really unrealistic. By your logic, if I were on a sinking ship, and I could only contact the Coast Guard by getting on a non-ham frequency, I shouldn't do it? That is the whole reason there are exceptions in part 97! Your logic is along the same lines as not administering CPR to someone because you are afraid that you may break their ribs in the process and be charged with murder after they die? That is why there are good Samaritan laws!

Not really relevant. There is no exception (like 401 & 403) in NY law which specifically allows you to use an unlicensed weapon. We are talking about legal, licensed Amateurs following a federal law. Not john doe who happens to have a 2m HT and needs to establish emergency communications.

1838. Want Software/Interface For Icom

Newsgroup: rec.radio.amateur.equipment
Date: 2002-02-07 23:59:17 UTC
From: ddmga@yahoo.com
Message-ID: <296ea75a.0202071559.359a041f@posting.google.com>

I'm getting an Icom IC-R7100 scanner/receiver. I need an interface
and software. I know it can use the CT-17 cable but I would take
another interface, if better or cheaper. What software & interfaces
are there? What is the best?

I will buy new or used. If you're selling a copied CD of some
software, if it's not legit, I don't want to know (about it).

I would like to pay with Paypal.

Here is some software & hardware (any feedback?):

http://n9zle.tripod.com/

Thanks for any help! -David

Have a Ten Tec 242 remote VFO for the Triton IV (540 and 544)rigs.
Looks good,but the main tuning knob has some scratches. Works goods
(used it on my TT 540). Price is $65.00 plus shipping from 96003.

You can always go the other way, perfectly legally. Use a commercial radio and put ham frequencies in it. If you are active with some group or agency, such as search and rescue or other emergency services, and have periodic legitimate access to commercial frequencies, then this is certainly the way to go. I still have some ham radios, but anything I buy anymore is commercial, part 90 certificated, and I put the ham frequencies I want in along with the other frequencies I need.

I do NOT intend to suggest that using a commercial radio on a frequency you are not authorized on is any more legal or advisable than using a ham radio on the same frequency - it's not. But it is 100% legal on commercial frequencies you ARE authorized on, whereas using a ham radio is not. And it is also perfectly legal on ham frequencies.

Would I use either a ham or commercial radio on a frequency I wasn't supposed to be on in an emergency? To save a life, probably if there truly was no other option. Otherwise no. But having to make that choice means I wasn't properly prepared with regard to communications to start with. That's where your real focus should be.

Carl.

1853. VX-5R w/ external speaker/mike acts funny

Newsgroup: rec.radio.amateur.equipment
Date: 2002-02-08 04:01:49 UTC
From: senecal@mapson.cs.ucdavis.edu
Message-ID: <senecal-0702022001490001@d71-096.solano1.ucdavis.edu>
Source record: 47754

Hi all,

I got a Pryme Speaker/Mike for my VX-5R, and now the radio is acting a little funny. When I push the mike's PTT switch the radio's backlight comes on! It doesn't do this with the external speaker/mike removed. I've checked the manual, and I can't find anything about this (unless I overlooked it) so I don't think this is a "feature".

Any opinions? Am I shorting out something somewhere, or...?

Thanks!

-Josh Senecal

Mark,

Thanks for the DSP and NB info. I indeed downloaded and tried the DSP demo from the silicon pixels site. Overall, I am mostly unimpressed with the performance with two exceptions: (1) autonotch filter which is quite good, and (2) the CW filters really can narrow down the bandwidth sufficiently to cut out almost all other noise. As for SSB/ AM/ FM reception, I find a GOOD noise blanker more useful. The bottom line is: thanks for saving me $150+! I definitely won't be spending money for the Icom DSP module.

AB

WARNING: SHAMELESS ADVERTISEMENT ALERT.

(Hey, at least I'm honest about it...)

Now that I've finally got my shop together, I think it's time I started to let the ham community know that I am ready to offer small-volume RF services to those who may not have the test equipment, tools, skill, or time to do it themselves.

My specialty will be conversion of older Motorola radios to ham service. However, I am also licensed to make such equipment operable on commercial frequencies (FCC General Radiotelephone + Radar endorsement). Besides the licensing, I spent seven years with Motorola's Comm Sector, and I've got nearly 25 years as an active hamateur under my belt.

I can offer basic test & checkout, recrystalling, alignment, modifications, and minor repair. My base rate is $40/hour with a half-hour ($20) minimum (I think this is at least competitive with the commercial shops). I can also offer a special rate for basic checkout only of $10.00 per radio.

Please keep in mind that I'm still building up my lab, and my stash of manuals and test gear. There may be radios that I cannot service at this time. Mobile-wise, I'm set up for (Motorola) Motrac, Motran, Mocom-70, Micor, Mitrek, and the first-generation Syntor. I can also handle MT500, MX (non-synthesized only at this time), HT90, HT440, and RF Link units.

As time goes on, I hope to add capability to service the later radios such as Syntor X/X 9000, Spectra, Maratrac, and others including GE.

I can be reached at the human-readable address in my signature block, or as sales (at) bluefeathertech dot com.

Thanks for reading.

You may be right but as I understand the rules, having held both kinds of license, "Commercial" radios, like CBs, must be type accepted (terminology??) and only techs having a commercial license can work on them. Amateurs are free to mod them for our own use but then the mod'd unit looses type acceptance and becomes an "Amateur" radio. Thus using one that's been mod'd to add ham freq's would legally be no different than using your ham radio.

GE MPA VHF Aegis encrypted model. 146 - 174, 160 channels encrypted and 192 clear. I have been using this as my personal radio until I picked up a VX5 and the size and weight difference are big so out with old and in with the new. Great radio with full system keypad for DTMF and so many options you can't believe it.
With good battery, Rapid charger, and belt clip. $325.00
GE MPD UHF standard model 48 channel alpha-numeric display. Nice with little wear. Good battery. $100.00
GE MPD Scan UHF This is a 4 button scan model in good shape with a new battery and rapid charger. 48 channel alphanumeric display, 440 - 460. $125.00
GE MPD voice guard VHF system model with full keypad. DES I think. I converted this from a 403-419 radio with a VHF VG PA deck and tuned it to spec. The radio puts out 7 watts and receives as well as My VX5. With battery and charger. $145.00. Rapid charger add $10.00
GE MPS VHF 10 channel Like new with new battery, new antenna, and charger. $55.00
GE MPS VHF 12 channel Set of 4 that talk to each other and all have new batteries and antennas. All in a rapid rack charger. $200.00
GE PCS VHF 136.-150. 2 channel. I have this on ham frequencies now with battery and rapid charger. $65.00
GE PCS UHF 440 - 470. 8 channel, This is working on the ham bands now with battery and rapid charger. $75.00
GE Monogram UHF portables 3 with 1 dual slot charger. 10 channel $225.00 for all.
GE phoenix sx VHF 16 channel priority scan. With all accessories including a power plug. Tested working. $75.00
Midland 70-336B VHF 8 channel 35 watt mobiles with mics. I have 3 of these. $75.00 each
Marconi UHF portable 16 channel scan made by midland $75.00
Mastr II 75 watt mobile has uhs pre-amp. Painted handle. $75.00
Mastr II Control cable, 8 channel. $8.00 each less the more you want.
Mastr II control head. for mobile repeater operation. $5.00 each.
Mastr II mic. $5.00 each less the more you take.
Mastr II tone boards. These boards will hold 8 different tones or 1 for each channel in the radio. $5.00 each
Mastr Exec II VHF 75 watt mobile. With all accessories. $60.00
Mastr Exec II Mobile extender VHF for UHF Mastr II $20.00 each. I have a large number of these so make an offer on 10 or 20.
Mastr Exec II Mobile extender VHF for UHF Ranger (Ericsson marked) $75.00
Mobile Repeater cable for Mastr II $10.00 each.
Mobile Repeater cable for Delta or Ranger. $30.00 each
GE Voter in special rack with 9 rec. cards and test cable. $300.00
GE MPA, MPD Public safety Mics. $35.00 each

GE PCS Universal Rapid chargers. $35.00 each
GE MPA Standard chargers. $20.00
GE MPA Rapid chargers. $30.00
GE MPI chargers with wall transformer. $8.00 each
GE MPI Rack chargers. 8 position $25.00 each
GE MPI Mobile battery charger. Only one I have seen. For 2 watt battery. $20.00
GE white Versatones 103.5, 162.2, 173.8, 179.9, 186.2, and 203.5. $4.00 each I need 88.5 and 151.4
GE Mastr II Icoms EC $5.00 each and 2c $12.00 each I do not have many left.
GE Delta down loading cables. Will work with S825 heads. $40.00
GE Delta mounting plates. $10.00 each
GE Ranger mounting plate $15.00
GE s-550 and s-500 mounting brackets. $5.00 each
GE little seen shoulder strap for any GE radio with rear accessory point (where the belt clip is attached) Leather strap like new. $15.00
GE Belt clips $10.00 each
Motorola S1350C wattmeter with 10 watt 500-1000 MHz element. $75.00
Motorola GP300 VHF 2 channel with charger and OK battery. $175.00
Motorola Saber Speaker Mic. $35.00
S-Com 100 repeater controller. Rack mount with manuals. $125.00
GE VHF Ranger 19C852150P4 110 watt. With cable, Base plate, Mic, 825 scan head, and speaker. 228 channels with Alpha-numeric display Ready to program and install. $275.00
Motorola Mitrek VHF high drawer only with 1 set elements. $45.00
Motorola UHF converta-com Amp. 2 watts in 40 watts out. $50.00
Motorola adapter for 1801 suitcase programmer. Fits MX radio A & B proms. $175.00
Assorted GE portables. PE' MPR, MPI, have several in unknown condition. Sold for parts only $5.00 each
EF Johnson 242-8600 800 MHz with desk mic. $25.00
Maxon Rack charger for the 0520/0510 radio. I think the SP2550 will work, Rapid $35.00
Voter from IMTS phone system. I do not know much about this one. $40.00
Antenna Specialists glass mount UHF antenna. New in the package but package is a little worn due to the Hamfests it has traveled to. $22.00
Antenna Specialists glass mount 220 MHz antenna. New in the package but also worn due to me packing it around to Hamfests. $22.00

Want list not FS
Programming cable for Johnson Scorpion portable. Extra Data module for GE suitcase programmer. Any cables that go to the TQ 2310. Dual band Ham mobiles. UHF mobiles that will go in the ham band. Original IC706
Terms
All prices are plus shipping from 40201. All Items are used unless noted and only have a no DOA warranty. I take cash, USPS Money Orders, and Paypal. E-mail for any questions.

The term "Type accepted" has been replaced by "Certificated" - just semantics though. You do not invalidate the certification by simply programming in frequencies in the amateur band. If you were to actually modify the radio so that it no longer met the certification criteria, then you are correct.

It is also not illegal for the owner/end user of the radio to own and use programming software/equipment. There is no longer an FCC requirement for that work to be done by someone holding a commercial radiotelephone license. If you program and use a frequency you are not licensed, or otherwise authorized, to be on, and transmit there, that would be in violation of the rules.

Modifying a commercial radio so that it is "front panel programmable", i.e., the end user can change frequencies directly on the radio, would technically invalidate it's certification. However many commercial radios have a "dealer mode" that is used for programming, which is then supposed to be hardware or software disabled before passing the radio on to the end user. Some people keep that mode enabled, which again technically, would invalidate the certification.

I am not aware of anyone actually experiencing a (legal/fcc) problem simply by having and using a commercial rig that has front panel programming enabled, however there are many examples of people who have used such a radio illegaly, i.e., transmitting where they don't belong, being fined.

Times have changed. Radios are no longer "type accepted" but have an
"FCC ID number", which is pretty much the same thing.

You do not need a FCC technicians license to work on commercial
equipment except for Maritime, Aviation, and broadcast transmitters.

Putting a ham frequency in a commercial radio would not necessarily void
the FCC ID number for commercial use. With today's wideband computer
programmed radios, modifying a commercial radio to ham band is as simple
as a computer key entry.

1872. Mirage B108 rf sensing

Newsgroup: rec.radio.amateur.equipment
Date: 2002-02-08 16:18:19 UTC
From: wschoppe <wschoppe@suffolk.lib.ny.us>
Message-ID: <RVS88.929$yK.23628@iad-read.news.verio.net>
Source record: 47774

Thanks to those who offered schematics in my last request...
Unfortunately, I have never dealt with rf sensing or darlington circuitry and it has been tough to troubleshoot the amp.
The relay is not being activated because something is not sensing the rf or rectifying it to make the relay operate.
I have checked diodes, caps and such with my limited resources and really suspect the transistor. If it proves to be the relay, what a job to try to unsolder that thing. The whole amp board has to be unsoldered from the front panel switches. It will be a tough thing to do.
Anyway, sorry to bore those reading this. Any suggestions?
I know it is old and I have checked the manual for hints. All the suggestions that are listed check out.
Thanks for any help.

>There is small problem with my dr112e alinco VHF base.
>I am able to transmit,
>but unable to receive any stations.

Raju...I don't have the same rig, but I do have the DR570 dual band rig. One thing might have happened....does the DR112E have CTCSS encode/decode? You may have accidently activated the decode function....the receiver will open squelch only when the proper tone is RECEIVED. So, you can play with volume/squelch but hear no received audio until the radio receives the right tone. My rig has an indication on the LCD to indicate that encode/decode is active.

Hope that is the problem...easy to fix!

A

Have a good cond. TS-430S for sale. It has some scuff and scratches on the covers,but the face is nice.I rate it a 7+ on a 1-10 scale (I'm very picky). Works 100%. Has the narrow CW filter and comes with a MC-80 desk mike and original manual. No FM board. Homebrew power cord. Good for a back up rig,starter rig,portable,etc.
Price is $350.00 + shipping from 96003. I accept Pay Pal.

Hmmm, K4MSG was selling one that worked on eham on 12/05/01 for $75 ..
;o)

Given lack of experience and equipment similar to my own, and the
attendent chance I'd ruin the thing completely whilst disassembling it,
I think I'd try to add an external "Stby/Operate" line/switch to operate
the relay and use/sell it as a base station amp; providing a good excuse
to buy a new 50+ watt xcvr for mobile. HRO has them for under $150.

1881. Yaesu FL-2100 B Amp Problem - HELP PLEASE

Newsgroup: rec.radio.amateur.equipment
Date: 2002-02-08 18:23:02 UTC
From: sm935@yahoo.com
Message-ID: <c4145514.0202081023.4580ffaf@posting.google.com>
Source record: 47782

An elderly friend of mine (in another city) has an FL-2100 that has a strange problem. The amp "burned up" a tube, so I sent him a brand new pair (non-Svetlana...some other brand from AES). The amp works great and sounds great until he talks (on SSB) for about 90 seconds. Then, one of the tubes begins to "glow red" and get "hot" (from what he tells me) and remains " bright red" for as long as he talks. The transmit audio remains fine even when glowing red. In addition, once the tube has begun to glow red, it will remain bright red for as long as he holds down the mic button...even if he's not talking or modulating the rig at all (no fan noise or other sounds are being transmitted, either, during this time). As soon as he unkeys the mic, the red glow dims and ceases. When he keys up in a minute or so from the initial "red glow" it takes just a few seconds for the tube to start glowing again. He's replaced a "burned 33 ohm resistor" (don't know which one) and checked everything else he can think of, but no luck. He switched the tubes around, and now the tube that used to glow red operates normally, and the new (different) tube glows red...so it seems the problem is isolated to just one tube socket (??). This is driving both of us nuts - has anyone had this problem and/or have any ideas for us? (The bias current is set according to the manual specs). Many thanks. Scott.

1883. HP Oscillator from an HP5245L counter

Newsgroup: rec.radio.amateur.equipment
Date: 2002-02-08 19:03:31 UTC
From: Tracy <thooker@psl.nmsu.edu>
Message-ID: <a417fu$5u0$1@bubba.NMSU.Edu>
Source record: 47784
Cross-posted to: rec.radio.amateur.equipment,rec.radio.amateur.homebrew

Hi all,
I took the 10544 oscillator out of an HP5245L counter. I also got the small plug in card that was next to it, which seemed to be hooked up to the 'timebase output' switch on the rear of the counter. The switch allows a user to select one of several outputs (10, 1, .1, etc MHz). I think the oscillator itself only puts out 1.000000 Mhz (at something like -20 dBm), so the card must have some multiplier and buffer stages in order to get 10 MHz.

Anybody have a schematic of this little plug in card? I would like to use the oscillator and the card in a small high accuracy frequency standard for my bench.

Thanks,
Tracy

You don't need to unsolder anything (except maybe the single wire that connects to the heat sensor that is mounted in the heat sink). Just remove the pc board-to-heat sink mounting screws, and the output transistor mounting screws, and the heatsink comes right off, leaving the front and rear panels attached to a frame that holds the pcb. Replacing a relay is easy once the heat sink is removed.

I would suggest that as long as you have it apart that you change out both relays, and use relay sockets for the replacements. This makes changing them next time a piece of cake. Also do the same for any switching transistors you need to replace.

Good Luck and 73 de W6DKN

supply,Maha MH-C777Plus battery charger with two MH-FNB-72
9.6 volt 1700 mAh batteries(charged only two times each!),
a brand new never used PowerPort Worldpouch for the FT-817,
and a new Superantenna MP-1 with optional side bracket mount
for this transceiver. Includes all original boxes, manuals and
accessories along with the 143 page Pack-it reference (better
than the Yaesu manual!) and a Vade Mecum card field
reference. I am asking $850.00 for this complete package!

Hi Joshua,

I have a Pryme Speaker/Mike and it does not trigger the backlight on my VX-5R when I press the PTT.

I would do a full reset on the radio and try it again. (I hope you have a programming cable and EVE.) The microprocessor in these radios can sometimes get confused and a full reset is needed to correct the problem.

Good luck,
Larry, K7RSP

Sounds like you want a discone ... reasonably good
match over a very broad range of frequencies, with
omni-vertical pattern. Suggest you seach antenna
books or do a web search ... I don't have a URL
handy.

1892. PL-259 in-line jack installation instructions?

Newsgroup: rec.radio.amateur.equipment
Date: 2002-02-08 21:36:00 UTC
From: cprstn54zz@att.net
Message-ID: <3c644389.33241203@news-server.optonline.net>
Source record: 47794

Where can I find instructions (including diagrams) on installing an in-line PL-259 jack (N-type, I think) on my coax? I know the housing and the end cap, but am unsure about the 5 other parts, all of which came as loose parts in a little bag.

The ARRL Handbook shows how to install an in-line PL-259 plug, but not a jack.

I have for sale a nice condition Yaesu FT-101ZD. This particular
transceiver is the version with AM mode included.
The cooling fan option is also installed in this rig.
Cosmetically it is in nice shape with one small hairline scratch
next to the clarifier control. Electrically it is in fully
functioning condition with full output 80-10.
$375.00 plus shipping and insurance from zip code 76001.

However, if you read the details, this only seems to apply if you have
eQSL print and mail a physical card to you by postal mail (and only
in the US, at least at this time) at a cost of $1 per card ... this
seems
to defeat the economy of eQSLing compared to "the old way." It also
would seem to put eQSL at an economic disadvantage compared
to the ARRL's proposed "LOTW" ... if I were eQSL I wouldn't be so
happy about this. (I'm not complaining about eQSL's charge for
printing and mailing a card ... that doesn't seem unreasonable for
the service ... I just view the process as an unnecessary step which
adds unnecessary cost ... to the disadvantage of the eQSL folks.)

DISCLAIMER: I am NOT affiliated with eQSL in any way and I'm
not really an awards chaser ... for me, it's just the principle of the
thing, where I see the eQSL folks as having come up with a good
idea that can save hams a great deal of cost on QSLing, and it
appears to me that the ARRL is making things tough for them in
ways that I view as arbitrary and unnecessary.

AFAIK the 10544 is a 10 MHz oxco from the 70's. It was later
replaced by the much better 10811. I have an old 5245L and it uses
neither. It has a 1 MHz xtal in an oven with an external oscillator
circuit. Maybe on late versions of the 5245L they offered the 10544
as a high stability option.

Can't help you on the circuit board. Any documentation I might have
would be for the old 1 MHz oscillator.

Hello Carl,
This decision and news was just released so there are a few loose-ends yet....soon it will be world-wide. The granting of permission for eQSL - DXCC cards acceptance was for any and all cards. The nice people at eQSL will be adding world wide capability very soon...

DXCC qsl'ing is now -cheaper- and -faster- than ever....a huge and bold step in the right direction.

Thanks for the response,

This is odd. This particular counter seems to have been factory retrofitted with the 10544 oscillator, but I looked at its output and it is defiantly at 1.0 MHz. There is nothing at 10 or even 5 MHz.

Thanks,

T

For Sale ----- Drake R-4B Receiver. Not perfect but not a dog
either. No major cosmetic problems. Electronically the rcvr works.
I have heard signals on all bands using a piece of wire for an antenna
(indoors). A good antenna (and maybe a peaking up) should improve
things quite a bit. Comes with manual (just purchased
reproduction of "original manual), four SWL crystals, crystals
taht came with radio originally (80/40/20/15 meters and 28.5-29.0
mHz) plus crystal for 1.5-2.0 mHz (160 meters). Would not selll
this except I just bought a new Kenwood TS-570 ..... need to pay
down credit card !

PREFER you pick-up but willl ship via UPS.
Will have it boxed properly at Mail Boxes etc type place
and shipped at your expense.

Paid $250 -------- asking $ 200
plus packing/shipping

CAM, the 756 PRO is much more radio than the 746 PRO which in turn is heads and shoulders above the original 746. The disadvantage of the 756 PRO is that it doesn't have two-meters like the 746 and 746PRO.

For the $$, I vote for the 756 PRO hands down.

From: Doug Gavilanes <gavilan1@earthlink.net>
Message-ID: <3C64B238.B90485A9@earthlink.net>
Source record: 47709
Cross-posted to: rec.radio.amateur.equipment,rec.radio.amateur.digital.misc

Greetings de N6XQY. I am trying to set up a Tiny-2 with GPS support to operate with my Magellan GPS-315 GPS and Kenwood TM-V7A dual band mobile. I have already made the cable for the DATA port on the V7A for the TNC's DIN jack, and have the Magellan serial/power cable for connection to my TNC's serial port. I have not been able to find a text specific to the Pac-Comm Tiny-2 that lists the settings in my Tiny-2 that I need to get up and running in the mobile for position reporting on APRS. Linda at Pac-Comm shipped me the current firmware manual with the required GPS-enabled eEprom, and I am able to communicate with the TNC from my PC, so all I need are the settings to get up and running. If anyone out there can help here, it would be greatly appreciated. It seems that the command set for this TNC is a bit different from say, a KPC-3, and that's the only info I've come across here on the Web.

Thanks in advance,

Doug Gavilanes, N6XQY
Garden Grove, CA.

I picked up a Yaesu VX-1R, and I love it. With the added receive coverage for broadcast band, VHF TV, 220MHz, and 800MHz, it's lots of fun, for only $129. The battery lasts me all day with minimal TX, or for at least 8 hours when TX is up around 30%. Just my opinion. Oh, yes, 2M and 440 work great, if you want a pocket sized, 500mW HT.

They really don't even have a commercial operator's license as far as I know.. at least they are not issuing new ones.. I had my 1st Phone many years ago, and they abolished that and gave all 1st and 2nd Phone holders a GROL (General Radiotelephone Operator License).. but they have even stopped issuing those from what I have been able to ascertain... as I can't even get a new copy of my tattered certificate.. :(

The 10544 and 10811 have identical interfaces, so any HP instrument
manual for an instrument with a 10811 will get you the info.
Alternately, you can just measure the pin voltages on the board you
have to tell you what the pin out is. There are two power supplies:
+12V @ 40 mA for the oscillator and 20 to 30V for the oven.
They have separate ground pins, so be sure to ground all pins
that are grounded in your counter.
When the oven is warming up on a 10544, it looks like a 47 ohm
resistor. There is also -5 to +5 electronic frequency control that
gives 1 Hz of tuning range.

I suspect the oscillator puts out 10 MHz and there is a frequency
divider on the interface board to reduce it to 1 MHz. The old HP
oscillators that actually ran at 1 MHz like in the 524 counter had
huge crystals, that were themselves nearly the size of a whole
10544 oscillator.

Whoa!!! There goes the warranty on those tubes!! Likely a parasitic oscillation due to non-neutralized new tubes. Always re-neutralize new tubes, and replace them in matched pairs! I'm guessing the 33 ohm resistors are in the parasitic supressor, and you have a Huge VHF parasite. You can easily tell by checking the "key down but no drive" plate current (quickly). If after you speak, if the plate current continues and moves around without immediately going to the bias level, we talking a big time parasitic, meaning the amp is oscillating on it's own at some other frequency. Also check the bias supply and be sure the bypass caps are still good. A parasite is also know to burn up band switchs, take out HV chokes, tank circuit ceramic caps etc. Check those out too. Good news is your HV and filament power supplies are still good! If you're really really lucky, the 572's are still okay, but I'd suggest you go QRP until you fix the amp.

1938. Outbacker perth antenna fs/ft

Newsgroup: rec.radio.amateur.equipment
Date: 2002-02-09 17:11:35 UTC
From: DBN <dnicholson@socket.net>
Message-ID: <u6bav27pq07f1a@corp.supernews.com>
Source record: 47747

I have for sale or trade a Like new Outbacker Perth HF antenna. I used it for abt a month before I changed to a screwdriver antenna. It is perfect condition and worked fine. I just wanted a remote tune antenna!
I will trade this antenna for a good UHF handheld, either a amateur or a commercial type of 16 channels. Handheld must have a good battery and a charger. Other acc. would be nice.
Some of the types of commercial Ht's I would consider are
Motorola P-110, GP-300, gp-350
Kenwood TK-370, TK 380

Amateur Ht's
Icom 4AT, Micro4AT
Kenwood TR 3600A, TH-41BT

Others considered if in good shape and easy to program.

OR I will sell the Perth for $150 shipped

email direct as I don't reply to posts on the news group....

Dan/NFPE

I have for sale a nice condition Yaesu FT-101ZD. This particular
transceiver is the version with AM mode included.
The cooling fan option is also installed in this rig.
Cosmetically it is in nice shape with one small hairline scratch
next to the clarifier control. Electrically it is in fully
functioning condition with full output 80-10.
$375.00 plus shipping and insurance from zip code 76001

1942. BayGen Freeplay 360 AM/FM Self Powered Radio 4 sale.

Newsgroup: rec.radio.amateur.equipment
Date: 2002-02-09 17:56:31 UTC
From: "Rodger N. Bird" <rbird2@peoplepc.com>
Message-ID: <MPG.16cf2cd7eadba5fe98969c@trialnews.peoplepc.com>
Source record: 47740

I have a BayGen Freeplay 360 AM/FM Radio for sale. This is a self power radio and will run on the following power Sources:

Internal - B-Motor textured carbon spring driving a DC generator through a transmission.

Solar - High performance thin film solar panel

External - Optional DC adapter (center pin positive) 4.5 V 150mA (minimum)

The Frequency Range is:

FM - 88 to 108 MHz

AM - 520 to 1700 KHz

For more information see the following web pages:

http://windupradio.com/freeplay3.htm

http://www.ogormans.co.uk/freeplay360.htm

http://www.productsforanywhere.com/gear/details/fp_360.html

The Freeplay 360 is in excellent condition and works fine. The selling price of $50.00 includes shipping costs within the continental United States.

Please email me direct if you are interested. Do not reply to this message. My email address is: rbird2@peoplepc.com

Thank you,

Rodger

The center element (the disc in discone) is connected through the 50
impedance of the receive to the ground of the receiver and then to the
ground of the antenna. The antenna mast should be connected to earth
ground. This will bleed of any static charge.

The antenna should also be fitted with an appropriate lightning
protector.

You can also use a coaxial tee connector and put a resistor on it to
provide a DC path to ground. A 10k resistor will bleed off any staic
charge and will not affect antenna/receiver sensitivity.

Broadband Meter, Radio, Magnetic & Electric - Ebay

This is the TriField Broadband Meter made by AlphaLab. It measures Radio, Magnetic, and Electric fields. It's scales are: 0-100 milligauss Magnetic, 0-3 milligauss Magnetic, 0-100 kilovolts/meter Electric, .01-1.0 KV/m Radio/Microwave (100KHz to 2.5 GHz).

You can use this to measure exposure levels to various fields in your home, or you can use it to verify that your radio station is operating within FCC guidelines. I've even used it to watch the intensity of lightning strikes (using the electric field position).

This is a very nice instrument. It is in perfect condition. I bought it new for $145 a few years ago. The instruction manual and a technical brochure discussing radiation hazards and measurements are included.

For auction on Ebay, click on:
http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=1330505507

I will be glad to provide additional information. Contact me at w4tq@mindspring.com

Never mind. I've resolved the settings issue. Now that I've hooked it all together, the DCD LED won't turn off regardless of whether there is a packet coming through or not. Therefore, the TNC is not sending at all. I have confirmed my connections several times: TNC DIN 1 to 6-pin Kenwood pin 1 (TX data from TNC), TNC DIN 4 to 6-pin Kenwood pin 4 (for 9600 baud data out to TNC), TNC DIN pin 2 to 6-pin Kenwood pin 2 (GND), and TNC DIN pin 3 to 6-pin Kenwood pin 3 (PTT). If I key an HT nearby, that interrupts the DCD LED, and the TNC keys the mobile. Real strange.

Oh, well.

Source record: 47653

Most hams who do any serious HF mobile will appreciate this.
Royce L Pierce, K5ZH died January 31, 2002 at the age of 67.
Royce invented and manufactured the Texas Bugcatcher and the new
Texas Twister that have been exclusively sold by Henry Allen at
GLA Systems. Royce was an excellent machinist and craftsman.
All his products were made by hand in his little machine shop
at his home. If you're not familiar with his work, you can see
some of it at texasbugcatcher.com. It will be tough for Henry
to find another supplier who does this kind of work.

Royce has also hand crafted several HF amplifiers that were
better than anything made commercially. 1 and 2 hole 8877 amps
were his specialty. A friend of mine owns a 75 meter monoband
amp made by Royce and it is truely a work of art.

Royce has had at least one and maybe two of his custom
Harley Davidson motorcyles featured in some of the popular
motorcycle magazines.

Royce was crusty and hard to get to know but I'm glad I knew
him. He was honest and trustworthy and meticulous to a fault
about his work.

Good bye Royce, rest in peace.

OK, got it straight. Tried to wire up the rig for 9600 baud. Bad idea. I disconnected the 9600 data out from the radio, connected the 1200 baud data out, set the TNC jumper for 1200 baud, and away we go. Some of the cabling diagrams here on the web are in error, showing the 9600 line used, or showing the 9600 and 1200 lines jumped and connected to the TNC. Fine way to spend a Saturday. Anyway, I hope that this helps anyone with the same dilemma.

Hi there,
I have a pair of Motorola UHF Radius SP-21'S in beatiful shape
Made 99/05/22
These are proffesional business radios,

* 2 Watts,with built-in Private Line and built-in VOX capability
* 12.5/25 kHz programmable channel spacing
* Motorola unique voice compression technology for superior audio

* PL Standard Codes (Private Line)
* Voice prompt programming
* Built-in VOX - Voice Operated Transmission
* Lightweight compact design
* Nickel Cadmium Battery
* UHF Whip Antenna
* 2.5" Belt Clip
* NOTE NO CHARGERS (SELL FOR $5.00 each)

These radios new sell for above $200
I am asking $160 shipped, gaurunteed to be in perfect working
order! E-mail me directly for any questions or for a picture.
Thanks-Russ

Nah. They'll just require a "donation" via Paypal before your call shows up on
eQSL's "service."

Just think... you not only need a rig and antenna, you'll need Mastercard too
<g>.

I think I'll stick to green stamps and mail. I like getting 'real' QSLs and I
give the incoming DX stamps to the neighbor girl for her collection.

Hi
I have a real nice 2100B amp. It is in perfect working order. Tubes are a fresh set of Cetrons 572B's, Output is about 650 Watts. Amp is in super clean condition. Wired for 110Volts. This is my back up amp . The only thing that has been done to the amp is the cover has been professional repainted (original color) by my friend, looks way better than stock. I also have the owners manual

Asking $365.00 plus shipping

Thanks john KI4NR

Jeffrey,

I believe that they're LEDs. They should last a little bit less than forever. I wouldn't worry about them. Besides, Rat Shack sells the replacement parts for that model. I have one in the mobile, and the Pro-92 handheld, too, and I wish the 92 had the backlight that they put in the mobile version 2067.

Regards,

Doug Gavilanes, N6XQY

Sell/trade Noritake China for Ham Gear

Please your lady on St Valentine's Day.

I have 95 pieces of Noritake Dresala 3033 and no lady to please -- just me and the two Rott boys.

mschina.com sez it's a popular, discontinued pattern, that the replacement value is around $1500, and the sell value is around $700.

I'm interested in amps, antennas, towers, TS-850s, rotators, masts, etc., and, naturally, money ;o)).

The AOR SA-7000 is a dual element ultra wide band receiver antenna that works better than most discones, which run out of puff at around 1200 MHz. It operates well between (around) 25 MHz and still exhibits some signal gathering capacity at almost 2000 MHz. That's pretty damn good as far as antennas go. AOR also make a discone (the DA-3000) which works better than my Diamond D-130 (Icom's AH-7000 is the same antenna, rebadged & sold for almost double the price) and also covers similar frequencies, though not as sensitive on HF. Try 'em, you'll like 'em.

I'd used Acid Flux (The liquid kind you buy in a bottle for Plumbers) initially. Soak it in the stuff for a minute or so, then use a torch to burn it off. Do that a couple times then rinse it off. Then Solder it with your standard Rosin flux based 60/40 solder and a big Weller pistol grip solder gun. Never a problem.. works every time for me.

hello,

i have for sale a complete swan 500 station. the station includes:

1) Swan 500 transceiver 150+ watts out on 80m about 80 watts out on 10
2) model 410 external vfo
3) 117xc power supply
4) sure 444 desk mike with swan logo
5) swan model 3000 2000 watt meter
6) model 22b vfo adapter
7) model vx-2 vox unit
8) model fs-1 field strength meter.
w7fg copy of manual

only mods that has been done is a muffin fan wired to jones plug that sits on top of finals and the speaker is wired for use with a dsp unit. muffin fan comes on when rig is turned on. this equipment is very clean and in service at my station. this equpiment is not "mint" because it is not brand new. i can email pictures on request and you judge for yourself. on air test could also be arranged, conditions permitting.

i want a heathkit hw-9 qrp rig with the warc bands. would also like to have the matching tuner and wattmeter. if you have one i may be able to put a little cash with this to make the deal.

cash price is best offer over $325.00. it took me over 4 years to get all this equipment together. alot of equipment for the money.

I found that PC-based CW instruction software to be very effective. I tired several and finally purchased Morse Tutor Gold. It was by far the most powerful and versatile. It took me all the way to 20 wpm and beyond so I could easily get my Extra. Went from no-code Tech to Extra in 6 months...

I too only learned CW to fulfill the licensing requirements. I have - never - sent a dit or a dah and do not plan to ever do so. Moreover I don't even own a key. I have no problem with CW as a mode or with those that prefer it over all other modes. that is FB too....

Good luck on the CW and I'll be looking for you on - phone - on of these days!

Which "little plug in card"? The "original" HP5245L had a crystal oven with a "little plug in card" next to it in the A26 slot. This card had two circuits, the osc/agc loop and a "trigger" (looks like a distribution amplifier?) Both of these circuits worked at 1 MHz. The next "little plug in card" over (in the A27 slot) was the x10 multiplier.
Since you appear to have a modified version, with an oscillator instead of a crystal oven, I'd be guessing that the A26 card was left in place, using the osc. circuit as a buffer amp. The output of the A26 osc/agc loop went to a contact on the "mode" switch. The common of the "mode" switch was connected to the "trigger" amp input on the A26 card.
I doubt that my old schematic would match your card, but the pinout info and voltages may be useful. Would these be enough help?

Cross-posted to:
uk.radio.amateur,rec.radio.shortwave,rec.radio.amateur.boatanchors,rec.radio.amateur.equipment,rec.antiques.radio+phono

About 35 years ago I had an R1475 short wave receiver (2 to 20MHz). At that time a large batch were released by the Ministry of Defence onto the surplus market and I used it for about five years for general short wave listening and then disposed of it. Recently I have acquired another R1475 and I intend to fully restore it to "as new" condition. As part of this interest I would like to collate as much information about the receiver as possible. I intend to create a web site specifically for this receiver.

The R1475 (also known as receiving set 88 when used with its 360B power supply) was used by the British Royal Air Force some time after WWII. I understand that it was used as a ground station receiver, although the 360B PSU does allow 12v DC operation. I do not know if any other service used this receiver. . . Do you?
